A PESHAWUR letter states that the Ameer of Cabul has given orders to have fresh forces levied through Kazee Abdool Kadir. A daily report of the number enlisted is made to the Ameer. It is surmised that the Ameer will advance against Nowroz Khan in the winter. The same correspondent states that Nowroz Khan is at his home, and that the Mohmunds and other tribes are on his side, and will not allow the Ameer to overthrow him, but that none of the Afghan tribes will adhere to him unless he supplies them with money.

MILITARY ORDERS.

BRUCE, Captain E. A., permitted to return to duty.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

HIBBERT'S
HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:
"April 23rd, 1274.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A., writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her Limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship "Sidney A. Jenkins."—Dundee, May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Botties, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

INSIST ON HAVING HIBBERT'S SALINE

AGENTS FOR CALCUTTA,

BATHGATE & Co.

PROSPECTUS.

The Bengal Freemasons' Hall Building Association.

Capital—Rs. 1,50,000, *divided into* 1,500 *Debentures of Rs.* 100 *each, bearing interest at the rate of* 6 *per cent. per annum, payable half-yearly.*

1.—This Association has been formed for the purpose of building and maintaining a Masonic Hall worthy of the Freemasons of Bengal and of the Capital of India.

2.—*President*:—The Right Worshipful the District Grand Master of Bengal, or the Officer in charge for the time being.

3.—*Directors.*—To be four in number, exclusive of the President, and to be elected by the Debenture-holders from such members of the Committee of General Purposes of the District Grand Lodge as are likewise Debenture-holders. Should the number of Debenture-holders on the Committee of General Purposes, able and willing to serve as Directors, be at any time fewer than four, elections may be made from such members of the general body of Grand Officers and Past Grand Officers of the District Grand Lodge of Bengal as shall be Debenture-holders. With the Directors will rest the appointment of a Secretary and framing of Bye-laws.

4.—It is proposed to raise the funds necessary for the purchase of a proper site, and for the erection of the Hall, by the issue of as many Debentures, of the value of Rs. 100 each, as may be necessary. It is thought that 1,200 will be ample. One thousand Debentures will be issued immediately the formation of the Association is completed upon the following terms:—First payment upon each Debenture to accompany application, Rs. 25; second call, Rs. 25; third call, Rs, 25; fourth and last call, Rs. 25. Not less than three months to elapse between any two calls, and two months' notice to be given previous to second and each subsequent call.

5.—It is estimated that the cost of the building will not exceed Rs. 1,10,000, thus leaving Rs. 10,000 towards expenditure for decorations and furniture.

6.—After careful computaton, it is found that an income of Rs. 700 per mensem may be safely counted upon as derivable from rents received from Lodges, Chapters, and other sources. The interest upon the 1,200 Debentures, which it is thought it will be sufficient to issue, will amount to Rs. 600 per mensem; that a surplus would accrue of about Rs. 100 per month, or Rs. 1,200 per annum, from which will be formed a Reserved Fund for the purchase of Debentures to be the property of the District Grand Lodge in trust for the Craft, under the Grand Lodge of England, in the Province of Bengal.

7.—The Debentures to be transferable at the pleasure of the holder, but District Grand Lodge will reserve to itself the right of paying off so many of the Debentures annually as it may be able to do from its funds.

The Secretary to the Committee of General Purposes of the District Grand Lodge is prepared to record preliminary notices of application for Debentures.

Address—

The Secretary to the Committee of General Purposes of the District Grand Lodge of Bengal,

Freemasons' Hall, 55 Bentinck Street, Calcutta.

Prepared only by MESSRS. E. J. LAZARUS & CO. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendor

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATE, with 80 per cent Invested Solely for Policy Holders.

Example.

			With Profits.
A, aged 30, wishes to Assure Rs. 1,000.			
Annual Premium at Indian Rate	...	Rs.	36 0 0
Annual Premium at English Rates	...	„	23 10 8
Difference	...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

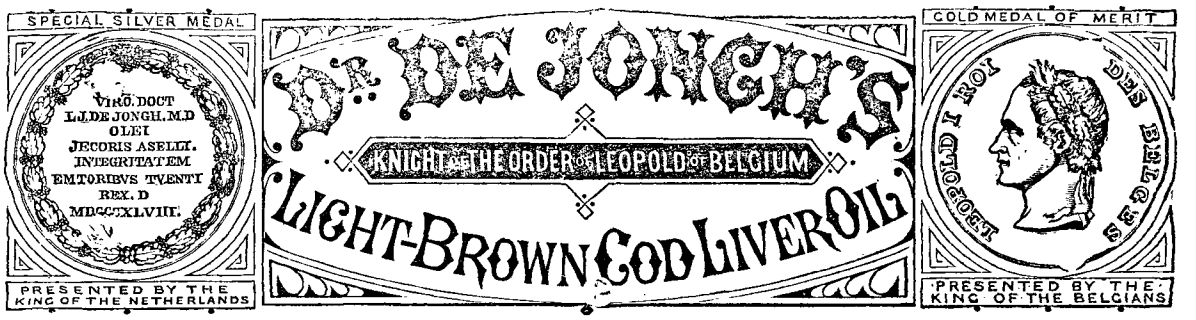
LYALL, RENNIE & CO.



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects, I must believe that I have seen many patients die, *both* in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for *my own* use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I *could wish* that DR. DE JONGH'S Oil *would* come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place on 15th November 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August,* 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT
SECURITY LIFE ASSURANCE COMPANY LIMITED.
Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM. £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10, 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.
ESTABLISHED IN THE YEAR 1834.
Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.
Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £37,030.

The prices range from Rs. 180 to 300 Cash.

Porcelain Breakfast Services.

In a variety of elegant patterns, comprising the "Blue Sprig," the "Green Leaf," the "Foliage," and other equally pretty patterns. Each set comprises:—

12 Breakfast Cups and Saucers	1 Sugar Basin	6 Egg Cups
	1 Butter Cooler	1 Cream Jug
12 Tea do. do.	1 Milk Jug	2 Flat Dishes &
12 Coffee do. do.	1 Slop Bowl	2 Covered Muffin Dishes.
12 Plates	2 Cake Plates	

From Cash Rs. 60 to cash Rs. 120.

Dessert Services.

In several of the newest patterns richly gilt, colored and painted, comprising:—

1 Centre-piece.	4 Corner Stands.
2 Side Stands.	12 Plates.

From cash Rs. 55 per Set.

An extensive assortment of useful articles in TERRA COTTA, WEDGEWOOD AND ROCKINGHAM WARES.

All at the most moderate prices for cash.

LEWIS STEWART & CO., 5 & 6, DALHOUSIE SQUARE, CALCUTTA.

W. NEWMAN AND CO'S NEW ADVERTISEMENT.

CASH PRICES.

POETICAL WORKS.

Alford's (Dean) Poetical Works, 2rs. 12as.

Arnold's (Matthew) Poems, Narrative and Elegiac, 2 Vols., 6rs. 12as.

——New Poems, 2nd Edition, 3rs. 10as.

Bailey's Festus, 2rs. 12as.

Betsy Lee, A Fo'c's'le Yarn, 2rs.

Blake's Poetical Works, Lyrical and Miscellaneous, 2rs. 12as.

Browning's (Elizabeth B.) Poetical Works, 5 Vols., 17rs.

——Selections from her Poetry, 4rs. 4as.

Browning's (Robert) Poetical Works, 6 Vols.

——The Ring and the Book, 4 Vols., 11rs. 8as.

——Fifine at the Fair, 3rs.

——Selections from his Poetry, 4rs. 4as.

Bryant's Poems, arranged by Himself, 4rs. 4as.

Buchanan's Book of Orm, 3rs. 8as.

——Tragic Dramas from History, 2 Vols., 6rs. 12as.

——Idyl's and Legends of Inverburn, 2rs. 8as.

——Undertones, 2nd Edition, 2rs. 8as.

Crawley's Horse and Foot, 2rs.

Clarke's Riches of Chaucer, 6rs.

Clough's Poems, with a Memoir, 3rs. 6as.

Cook's (Eliza) New Echoes and other Poems, 2rs. 8as.

Durand's (Lady) Imitations from the German of Spitta and Terstegen, 2rs. 4as.

Dutt Family Album (The), 3rs. 8as.

——Eliot's (George) The Legend of Jubal, 3rs. 8as.

——The Spanish Gypsy, half bound in best Morocco, 7rs. 8as.

English Sonnets, edited by J. Dennis, 2rs.

Eyre's (Sir V.) Lays of a Knight-errant in many Lands, 4rs. 4as.

Gray's Poetical Works, Illustrated, 2rs. 12as.

Ingelow's Poems, 2 Vols., 5rs. 8as.

Keene's Death of Akbar and other Poems, 1re. 8as.

Kelly's Delhi and other Poems, 2rs. 4as.

Kingsley's (Charles) Poems, including The Saint's Tragedy, Andromeda, Songs, Ballads, &c., 3rs 8as.

Lockhart's Ancient Spanish Ballads, Historical and Romantic, 3rs.

Lowell's Poetical Works, complete Edition, 2rs. 8as.

Kishoge Papers, Tales of Devilry and Drollery, by Bouillon de Garcon, 3rs.

Lytton's (Sir E. Bulwer) Poems, New Edition, 5rs. 4as.

——(Robert) Orval, or the Fool of Time, 5rs.

Miller's (Joaquin) Et-al, 2rs. 8as.

Milton's Poetical Works with Introductions and Notes, by D. Masson, 2 vols., 5rs.

Moore's Songs, Ballads, and Sacred Songs, 1re. 8as.

Morris's Earthly Paradise, Popular Edition, in 10 Parts, 20rs.

Mrs. Jerningham's Journal, 2nd Edition, 2rs.

Pennell's Muses of Mayfair, selections from *Vers de Societe* of the 19th Century, 4rs. 4as.

Puck on Pegasus, by the same Author, Illustrated by Leech, Tenniel, Doyle, Millais, &c., 2rs. 12as.

Poems by the Author of "John Halifax, Gentleman.," 3rs.

Powlett's (Lieut N.) Eastern Legends and Stories in English Verse, 2rs 12as.

Praed's Poems, with a Memoir by Derwent Coleridge, 2 Vols., 6rs.

Rossetti's Dante and his Circle, with the Italian Poets preceding him (1100-1200-1300)—a Collection of Lyrics, 7rs 12as.

Rossetti's (Christina) Goblin Market and other Poems, with 2 Designs, 2nd Edition, 2rs. 12as.

Saint Abe and his Seven Wives, a tale of Salt Lake City, 2rs 12as.

Songs of Scotland prior to Burns, with the Tunes, edited by Robert Chambers, 2rs.

Scottish Songs, a selection of the choicest Lyrics of Scotland, compiled and arranged with brief Notes by Mary Carlyle Atkin, 2rs. 8as.

Swinburne's Bothwell, a Tragedy, 7rs.

——Songs before Sunrise, 6rs.

Trench's (Archbishop) Household Book of English Poetry selected and arranged with Dates

Tennyson's Queen Mary, a Drama, 3rs. 8as.

Walt Whitman's Poems, selected and edited by W. Michael Rossetti, 4rs. 4as.

Whittier's Poetical Works, complete Edition, 2rs. 8as.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2114.] Calcutta: Saturday, September 18, 1875. [Vol. XLI.

EDITORIAL NOTES.

THE year 1875 will be long memorable as a year of almost universal floods. It is difficult to believe that there is not some error in the statement that 23 inches of rain fell at Delhi, on the 7th and 8th instant in the course of twenty-four hours. Forty lives are said to have been lost, and thousands of houses destroyed in this strange deluge. We have known 33 inches fall in Western India in 72 hours, but this Delhi flood is the heaviest we have ever heard of, except on the Ghaut ranges.

***

ALMOST every week seems to furnish fresh proof of the weakness of our Foreign Office administration. Thus instead of foreseeing the difficulty that was sure to arise from any proposal to make the young Nizam take part in the reception of the Prince of Wales, its occurrence seems to have taken the Government quite by surprise. And yet what are the facts? The Nizam is a nervous delicate child of nine years, who has never been away from his mother or made a long journey in his life. The health alike of the mother, grandmother, and child, make such a journey as that to Bombay or Calcutta out of the question, while the poor child from all accounts is about as fit to endure the fatigue and excitement into which the Government would drag him, as any other delicate and nervous child of his tender age. And instead of seeing all this at a glance, and itself suggesting that the child should be represented by the chief nobles of the Court, very considerable pressure, it is understood, has been placed upon the Hyderabad Ministry to force the child away from the palace, and compel him to meet the prince at Bombay. We are truly the stupidest nation on the earth. By our incredible awkwardness, we shall contrive to set abroad an impression that the Nizam is too high and mighty a potentate to dance attendance upon the Prince of Wales, whereas the thought of the poor child's meeting him, except by a deputation of his Ministers, should never have been entertained for a moment. The Foreign Office should itself have suggested this course, when the Prince might with perfect grace and condescension have been made to get a sight of the child somewhere in the neighbourhood of Hyderabad. Our *gaucéhrie* is, we say, at times incredible. All India should understand fully that the Nizam is too young and too delicate, to have duties of State of any kind thrust upon him as yet, far less such duties as those that were contemplated in the present case. And if ill-conditioned writers will persist in making mischief out of the simple event, we suppose they must. It was an act of downright stupidity to have invited the child at all.

***

ONE of these good natured critics takes occasion from the incident, to write from Secunderbad to a Bombay paper as follows:—
"Both the people of Hyderabad and those entrusted with high "powers look upon the English rule with the greatest distrust, and "with a feeling of dislike and even hostility which is only kept in "check by circumstances over which they have no control. The "other point that I have observed, is that according to popular "native opinion the British Government is not the paramount power. "I suppose there would be no question as to its being more powerful "than the Nizam, but still there are many people who consider the "latter a sovereign prince *wholly* independent of English authority. "And this it is we may be sure, that is at the root of the refusal to "meet H. R. H. the Prince of Wales. The 'nearest relatives and "*their* medical advisers' are no doubt of opinion that it would be "derogatory to the dignity of the Nizam to go out of his territories, "even though it be to meet the Heir-Apparent to the Crown of "England, more especially when the latter will not find it convenient to pay a visit to Hyderabad. Here is a direct affront to the "future Sovereign of England and India." We feel justified in saying that there is not a word of truth in the motives here ascribed to the Nizam's Court: but this is the story that will go all over the country, and be widely believed for no better reason than that it is a scandal.

THE Bombay Chamber of Commerce held a great field day on the 11th instant, against the imposition by the new tariff of a 5 per cent duty upon imports of long stapled cotton, and the following resolution was adopted:—

"That this meeting protests against the duty of 5 per cent *ad valorem* levied under the Indian Tariff Act, 1875, on raw cotton, not the produces of Continental Asia or Ceylon, imported into British India, as an unjust and impolitic restriction on the manufactures of India, and contrary to that sound principle of the commercial policy of England, and of other enlightened nations, which requires the State to give every encouragement to the free importation of the raw materials necessary for the development and extension of native manufactures."

Mr. Maxwell (W. Nicol and Co.,) remarked that the fact of the Government bringing in such a bill, shewed what the strength of the Manchester influence really was, and he proceeded to compare the position of the English and the Indian mill-owner. "In India mills "cost more than they did in England, as they had to be built more "commodiously than they were in England, and they had to use bet-"ter timber owing to white ants and dry rot; again the machinery "cost more, as they had to pay the freight, landing charges, insur-"ance, &c., before it got out here. It was true that the cost of "was less here than in England, but then on the other hand they had "to get out skilled labour from England for the more important "posts." Not one of the speakers, strange to say, had the candour to recal the fact, that Manchester fabrics manufactured from long stapled cotton pay the same 5 per cent duty. It would surely have been wiser to have looked this fact fairly in the face. The refusal to do so does not get rid of it: while it deprives the memorial of the Chamber of all weight, though its representations and reasonings were unanswerable.

***

SIR ROBERT WALPOLE said that "every man had his price." We are afraid that we must at last give up our faith in the integrity even of our town patriots, the incorruptable W. and the rosy rubicund R. The disclosure that Mr. Roberts is a candidate for the vacant Vice-Chair of the Justices, accounts we suppose for the fact that even the town patriots regard the retirement of Dr. Tonnerre as worth Rs. 41,000 to the public. It is not we suppose that Dr. Tonnerre is entitled to compensation on this strange scale, but that it is worth 41,000 to make the path clear for Mr. Roberts. The state of matters at the Bench is not satisfactory; and unless Mr. Hogg is to retire, the election of Mr. Roberts as Vice-Chairman will bring matters to a climax. And yet the Bench cannot do better than elect Mr. Roberts, and if the Government is wise it will promote Mr. Hogg and put some one else in his room. Nothing could be more unseemly than the perpetual squabbling between the town patriots and the present Chairman. The fault is not all on one side: the patriots talk twenty times too much, but in the main they deserve well of the city. With many administrative qualities, the Chairman lacks the indispensable one of managing his fellow men. He can keep the Justices neither in good temper nor in good order. Mr. Cockerell managed better, and if Sir Richard were the popularity hunter he is declared to be, he would long since have kicked Mr. Hogg up stairs. If wise, he will make the election of Mr. Roberts the occasion for doing so forthwith. If the Justices make Mr. Roberts their Vice-Chairman and can but induce Mr. Wilson to hold his tongue for a few months, while Sir Richard nominates a new Commissioner, all Calcutta will heave a sigh of relief.

***

A SOMEWHAT important Bill affecting the growth of poppy, was introduced into Council on the 2nd instant by Sir William Muir. The poppy is grown now extensively in Bengal, in the North-West, Oudh, and Central India, and to some extent in the Punjab, the Central Provinces, the Berars, Mysore, and Bombay, but very little in Madras, Burmah, or Assam. In Bengal, the North-West Provinces, Oudh, and the Punjab, the law is clear and satisfactory, but in some of the more recently formed administrations it is doubtful, and in Bombay and Madras very defective. In Bombay indeed, the same control is exercised as in Bengal upon the growth of the poppy and the manufacture of opium; but the legal authority for exercising it is insufficient. In Madras

no check, either legislative or administrative, exists on the growth of opium—a state of matters injurious to the revenue and to public morality. The Governments of Madras and Bombay contemplated meeting these defects by local legislation, but it is considered better by a comprehensive imperial law to ensure that the revenue is nowhere left without protection. Sir William Muir's Bill will not change the state of things in Bengal nor affect the system of export duty in Western India; but the power which the Executive by law possesses in Bengal will now be extended to all India. There is nothing in the Bill that calls for remark perhaps, and its reference to a select Committee is a matter of form we imagine.

***

WHO has been hoaxing the *Pioneer* on the silver question? Our contemporary writes: "One important circumstance in connection with the recent fall in silver, may be taken to "qualify hasty assumptions regarding probable consequences. "When silver stood at 55½*d.* some people may have wondered why a firm like Rothschild's or Sassoon's did did not "put as much silver as possible on board every P. and O. "steamer bound for India. *The difference between that low rate and "the Mint price here was equivalent to a very good profit on large "shipments.* Inquiry at the exchange banks in Bombay or Calcutta "would have explained the apparent disinclination of capitalists "to make hay while the sun shone. The price of silver was low, "but the stocks were also low, and no large quantity was available "in Europe for shipment to the East. And we have seen that as "soon as silver began to be taken up for India the price began to "creep up; and, were it not for Germany "hanging over the "market," the price of silver in London would before now be much "above the limit which excites currency alarmists. This position "of supply and demand in the silver market is one that might serve "for an illustration of the late Professor Cairne's amended statement "of J. S. Mill's "law" of equation between supply and demand." If the extract has any meaning at all, which we doubt, we have failed to discover it. There is no *Mint* price of silver in India, and the words we have italicized are unintelligible.

***

IT is unfortunate that English statesmen so contrive matters as to make England stand in an attitude of jealousy, if not of positive hostility, towards the Suez Canal. It has been so from the first, when our engineers under the inspiration of Lord Palmerston opposed the scientific men of all the rest of Europe, as to the feasibility of the canal. M. Lesseps, Jr., now complains of the interference of English diplomacy at Constantinople against the revised tariff, necessary to enable the Company to widen the canal. It is a matter of interest to all nations that the Company should be able to furnish the accommodation necessary for the ships using the canal. The accounts, of the Company for the year 1874, which have just been presented, shew that the net earnings were all but sufficient to pay the 5 per cent. interest due on the shares, and the slight deficiency was made up out of the profits of former years, leaving a large surplus to be carried forward. To pay 5 per cent. requires £400,000, and there was a deficiency of £78,000 only, made good out of the reserve fund, which will still stand at £105,000 after payment. The Company will thus be a financial success after all; and we feel humiliated that the success has been achieved in the face of incessant assurances on the part of Englishmen that it was impossible.

***

OUR system of patchwork legislation receives a curious illustration in the Bill introduced into Council by Sir Douglas Forsyth on the 19th ultimo to declare and amend the law in force in the Central Provinces. The object of the Bill is to set at rest doubts and difficulties that have arisen as to what really is the law in these provinces, while occasion has been taken of the necessity of this declaratory Act, to make the following change in a matter of detail. Section 7 runs thus: "Implements of husbandry "and bullocks *bona fide* kept for ploughing and implements of "trade are exempted from attachment and sale in execu- "tion of decrees of the Civil Courts." If it is wise to make this change in the Central Provinces, we may presume that it would be wise to do so everywhere. Would it not then be greatly better to embody the principle in a general enactment applicable to the whole country. The Bill is refered to a Select Committee to be reported upon in two months.

***

A WEEK or two ago, we recommended the Commission that has been just opened in Poona to enquire into the causes of the late riots in that neighbourhood, to consult amongst other papers Professor Green's Essay on the Deccan Ryots published in 1851. They would do well also to read an exhaustive article by Major Wingate in the April number of the old Bombay Quarterly Review in 1857; also a letter addressed by the late Mr. Saville Marriott in 1836 to Sir Robert Grant on the condition of the agricultural classes in Western India. Mr. Marriott was Revenue Commissioner if we remember rightly, at the time, and the letter must exist somewhere in the archives of the Bombay Secretariat. Mr. Giberne's evidence before the Select Committee of 1848 (Cotton cultivation) should also be consulted, and though the Blue Book has unfortunately been long out of print, there should be a copy of it in the local Secretariat or in the Asiatic Society's Library. They should also consult the report issued by Dr. Leith's commission of 1863 on the subject of prices in Western India. The fortnight's adjournment made by the Committee for the purpose of consulting the records on the subject almost mocks the occasion; for there is an extensive literature thereon, that requires careful study instead of mere perusal. The hints we have given will probably suggest to Colonel Francis a mass of valuable papers that have been recorded on the subject in the last forty years, and nearly forgotten. When Mr. Giberne after an absence of fourteen years only from one of the districts of Western India returned to it in 1840, he observed, he tells us, that "he did not "see so many of the more wealthy classes of the natives. The "aristocracy when we first had the country, used to have their "gay carts, horses, and attendants and a great deal of finery about "them, &c., The ryots all complained that they had had money "once, but they had none now." In another private letter written in 1849, an old Company's servant says: "Many of the best families "in the province who were rich and well to do when we came into "Guzerat in 1807 have now scarcely clothes to their backs, &c., &c. "Parties from whom they had been compelled to borrow at ruinous "rates of interest enforced their demands by attachment of their "lands and villages; thus they sink deeper and deeper in debt, "without the chance of extricating themselves." Our own impression is that for the last fifteen or twenty years our Sale law and the procedure of our civil courts have been the main causes of the distress of the landed classes, in Western India; and that the result would have been the same though there had been no assessment to the land whatever.

***

WE do not know who may be advising the Police Commissioner of Calcutta, in instituting the prosecution he has commenced against the Manager of the *Indian Statesman* for publishing the prospectus of the Roman Catholic lottery at Allahabad to aid in re-building St. Joseph's Seminary, but we think the prosecution is unwarrantable The case is reported in the columns of the morning papers of 11th instant as follows:—

Mr. Hume, Crown Solicitor in the Police Court, this morning made an application, by direction of the Commissioner of Police, against the printer and publisher of the *Indian Statesman* for a summons, the wording of which ran as follows:—

"Defendant is charged with having published in the *Indian Statesman* newspaper of the 7th instant the prospectus of a grand drawing of prizes projected by Revd. Fr. Lewis of Allahabad, such drawing of prizes being a lottery, and such advertisement being a proposal to pay money or deliver goods to persons on an event or contingency relative or applicable to the drawing of any ticket, lot, number, or figure in such lottery and thereby committed an offence punishable under Section 294 A., of the Indian Penal Code, which runs as follows:—

"Whoever publishes any proposal to pay any sum, or to deliver any goods, or to do or forbear doing anything for the benefit of any person, on any event or contingency relative or applicable to the drawing of any ticket, lot, number, or figure in any such lottery, shall be punished with fine which may extend to one thousand rupees."

The court not being in a position to entertain the application, unless the prosecution were instituted by order of the local Government, enquired of Mr. Hume if he had the "authority." Mr. Hume replied that he had, and would produce it on a future occasion, when he would renew his application.

The Police Commissioner has, we are satisfied, misunderstood the law. The full section runs as follows:—

294A. *Keeping a lottery office.*—Whoever keeps any office or place for the purpose of drawing any lottery not authorized by Government, shall be punished with imprisonment of either description for a term which may extend to six months, or with fine, or with both.

And whoever publishes any proposal to pay any sum, or to deliver any goods, or to do or forbear doing anything for the benefit of any person, on any event or contingency relative or applicable to the drawing of any ticket, lot, number or figure in any such lottery, shall be punished with fine which may extend to one thousand rupees. [Act XXVII. of 1870.]

Now the offence that is here contemplated, is not the opening of a lottery or raffle, but the opening of a gambling house, as both the heading and wording of the section shew plainly. It is the "keeping of a lottery office;" the keeping "any office or place *for the purpose* of drawing any lottery." The words we have italicized shew plainly, that the section is aimed at professional gambling houses. And to establish an offence under the section,

it would be necessary for Mr. Hume to prove to the Magistrate: (1) that the Revd. Fr. Lewis had opened a gambling office at Allahabad; (2.) that the Government of the N.-W. Provinces had given him no authority to do so; and (3) that the Government of Bengal had directed the present prosecution. For it is only the publishing of something connected with "such lottery" as is described in the first paragraph of the section, that is indictable under the second. The Police Commissioner has been wrongly advised beyond doubt, while he could hardly have chosen a more inopportune occasion of interference, than the disinterested lottery Father Lewis is opening at Allahabad. The Roman Catholic Church does not regard lotteries as wrong, but whether they are right or not in that, every one must agree that the selection of a purely charitable movement like the present, ought to have been the last interfered with in this way.

***

THE *Moscow Gazette* calls attention to what it thinks a very "curious remark" in the *Times:* "Finding that the only danger "from the approach of Russia to India, is in the excitement of vain "hopes among the discontented Indian subjects, it puts forth a "menace that England can retaliate by fanning the smouldering flame of fanaticism in the midst of the Mahomedan subjects of "Russia." Now who, asks the *Gazette*, can benefit by such a mutual instigation of their respective Mussulman subjects, except the Mussulmans themselves and other malcontents? "Such menaces "seem to us quite out of place, if both the States were resolved "to look, without mistrust, at each other's acts in Asia. Apart "from the manifest consideration that the rousing of fanaticism is "a double-edged weapon it is hardly possible for Mussulman "fanaticism to be as dangerous to us in Central Asia as to the "English in India. At all events, it cannot be denied that exciting "Mussulman fanaticism has never been the policy of Russia."

The Russian journals seem to ourselves to have at least the advantage of writing with better taste than our own on this subject, to put it on the lowest ground.

***

WE quote the *Statesman:* "Notwithstanding the fact that we shall "be called by the *Friend* 'insane' in our dread of Russia, we must con- "fess that we should be exceedingly sorry to see the following advice "attended to by those who are responsible for the safety of the Empire. 'Were every diplomatic scrap upon the subject in the Foreign Office 'consigned to the flames, and the department required never to open 'a chart of Central Asia, nor to look at a report thereon for the next 'ten years—it would be well for the country.' At the end of this ten "years of most masterly inactivity, we opine that the Foreign Office, "on opening a chart of Central Asia, would discover the Russian "frontier to be contiguous to ours here in India." We hardly expected that the words quoted would be taken *au pied de lettre*, our object simply being to discountenance the fussy alarm, with which the Russian advance is once more being regarded by our Foreign Office. But what if we did wake up, to find the Russian frontier contiguous to our own! *Nolens volens* Russia will be our immediate neighbour eventually; and to delay the inevitable, we are to make a cockpit of Central Asia.

***

OUR contemporary is young, and sometimes rushes into controversy upon subjects in ignorance of their literature. Thus he says:

The *Friend* does not strengthen its position by crediting those who suspect the intentions of Russia with the following absurdities. "We ought, it seems, to have thrown ourselves into the Circassian struggle for independence, launched an English navy upon the Caspian, made a railway between it and the Black Sea, and made the Caucasus our frontier line for the defence of India! Through our omission to do so, both Persia and Affghanistan are now, we are assured, thoroughly commanded by Russia and lie at her mercy; and from Samarkand a Russian army has only to promenade through Affghanistan upon our frontier." It is the easiest thing in the world for a man to demolish an absurd argument advanced by himself for that express purpose.

The *Statesman* cannot believe that such counsels were ever urged upon the State, and supposes us to have imagined them. It is hardly fair that we should have to inform him of the facts, at each step of the controversy. If he will refer to the literature of 1856-57 on the subject, he will find that while a part of the alarmist school were content with demanding that we should make Affghanistan and Beloochistan the base of our operations, others were insisting that our "natural line of defence" was the Caucasus: and that we made a fatal error in not seizing it during the Crimean War. So recently as 1872 we have Mr. Alexander Halliday (*Retention of India, Tinsley* 1872) writing as follows!—

If Great Britain throughout the Eastern war had had a distinct policy, instead of apparently no policy at all, arrangements should have been entered into for extending the war further to the east, with the view of our permanently annexing the province of Georgia. It would have been advisable, at this stage, that Great Britain should carry on the war alone in this quarter. France could have attempted to revive the nationality of Poland, or concluded peace, as she deemed fit. Great value was placed by the Russians on the possession of Georgia, hence the strenuous efforts made to reduce Kars, a Turkish fortress, not far from the frontier. Kars, in the hands of the Russians, would act as a check on an expedition from the soil of Turkey. The fortress should have been relieved, but it would have been no difficult task for this country to have retaken it from the Russians. The conquest of Georgia would have been easy, as in those days the forces of Russia were isolated, communication being imperfect, owing to the physical features of the country, in which the Circassians were still maintaining a struggle for independence, and the navigation of the Caspian not having been developed, all Russia's efforts having been hitherto confirmed to the Black Sea, Great Britain could have formed a navy on the Caspian, and constructed a railway between it and the Black sea, which should have been made free to all nations, Bosphorus included, as the straits of Gibraltar are free to ships bearing every flag. This country would thus have commanded both Persia and Affghanistan, and would have outflanked Russia in her approach to the south. The whole of the base line, which might have been seized by Great Britain during the war, is now in the possession of Russia. Great Britain having been committed to Empire in Asia, the line would have been most suitable to her, and would probably have enabled her to retain India, as long as she remained a great maritime power.

***

Mr. Halliday asserts in the same brochure, that Sir Charles Napier held that this line of the Caspian was "the true one to establish for the defence of India" and says that he has expressed that opinion in his correspondence. We are glad that the *Statesman* regards such counsels as "absurdities", only do not let him father them upon the *Friend's* imagination. They are serious counsels put forward by men of his own school, and he ought not to require to be told so when he takes part in this controversary. The truth is we are suffering from one of those periodic accessions of lunacy to which the nation is liable on the subject. Ten years ago, there was room for hoping that the disease had spent itself, and had finally disappeared, while we are fairly to-day in the midst of a relapse. On April 13th 1865 the *Times* wrote, "It is to be regretted "that this phantom of Russian aggression should still find believers. "We had hoped it had vanished for ever like many another error, "or that if it still found credence, it was only among a few sur- "vivors of a past generation." If the *Statesman* knew the history of the subject, it would not need to be told that this was not the language of the *Times* only, but that the *Homeward Mail*, (Sir John Kaye), *Allen's Indian Mail*, the *Daily News*, the *Pall Mall Gazette*, the *Morning Star* and the *Quarterly Review* all held the same language. The nation was in one of its lucid intervals. We consider it as a settled fact, wrote one authority, "a mere question of time that "within a few years we shall have Russia as a neighbour on our "Indian frontier. The practical point is—is a kind of border war- "fare to go on, each endeavouring to thwart the other, or are we "each to recognize our respective positions, each having a wide "sphere to operate on with the Himalayas as dividing us. We "*cannot* prevent Russia being our neighbour, and we *ought* not." We have now eclipse, and are once more being told that we must go to Herat, or we know not where else, to prevent it.

***

THE London *Economist* takes precisely the same view of the new Indian tariff as ourselves. It says:—"Every one who takes a judicious interest in Indian affairs, will have heard with satisfaction the announcement that the Indian Government are about to modify their tariff, with a view to diminish the protection now given to manufacturers in India, and to enable the English to meet them on more equal terms. As we have often before shown, it is in the interest of India that this measure is most imperative. We can conceive nothing more dangerous to the incipient industry of that country, than to attract capital temporarily into a trade by artificial bounties, and then withdraw the aid so given. The effect must be a great disturbance of industry in a country whose poverty is great, and which cannot bear such a disturbance. Yet this is what we are now doing. Every one is agreed that these duties are not to remain permanently, that they are to be got rid of as soon as we can spare the money, and, therefore, it is of cardinal importance that they should be abolished as soon as possible, and before they have done the natural work of protective duties in attracting capital to a trade, where otherwise it would pay less well than in some other, and attracting labourers to occupations which they would not otherwise follow, and from which, in the end, they must be dismissed," This is precisely what we have said upon the subject.

***

THE daily local papers record the death of Mrs. Piddington, wife of the late Capt. Piddington. "The poor lady has not lived long" says the *Englishman* "to enjoy the annuity which a generous public subscribed for, when the Government refused in a niggardly spirit, to grant a pension to the widow of a gentleman who had acquired a

world-wide reputation by his scientific attainments." There is often a strange perversity shewn by Government in such matters, and much of the opposition thereto that lies latent in the community is produced thereby. The time will come when Governments will respond as a matter of course to appeals of this nature, listening as they should in all such cases to the public conscience instead of thwarting all that is generous in its instincts.

***

THE Bhownuggur case continues to exercise some of our contemporaries severely. The question is an important one, being a legacy left to us by the late Mr. Anstey. The cession in 1866 of certain villages in Guzerat to the Thakore of Bhownuggur, involved the transfer of the soil and the allegiance of the people from the British to a foreign Raj; and the question is whether it was within the power of the Crown to make such a transfer without the sanction of the two other Estates of the realm. In issuing the proclamation of transfer, dated 29th July, 1866, the Bombay Government is declared to have arrogated to itself a power that is not vested even in the Crown itself, *viz.*, the power of alienating British soil and British subjects from the jurisdiction of Parliament and the established law courts of the empire. On the one hand it is contended that such a power resided in the old East India Company by charter, and that the Crown succeeded to all the rights of the Company. On the other hand, it is held that if the Company did exercise such a power it was *ultra vires*, and the transfer void. The main plea raised against Her Majesty's right of territorial cession is that the Sovereign in person has never been empowered to cede any land which has passed into the possession of the British Government, and that the sanction of Parliament is indispensable for the making of such cession valid. Such was Mr. Anstey's contention in the case which is now before the Privy Council. If the Privy Council should pronounce against the transfer, Parliament will be asked to take what action may be necessary in the matter, and the question will be once for all settled, with the consent of the highest authority in the British realm.

MOST of us have read with delight, some at least of the famous fairy tales of Hans Christian Andersen, and know him as a children's benefactor in every nation of Europe. He was buried with great pomp and honor at Copenhagen at noon on the 11th of August. All classes were represented at the funeral, from the Working Men's Association up to Ministers of State, Foreign Minister, and Royalty itself. Seldom has literary genius achieved a greater triumph than in the case of Andersen. Born and nurtured in poverty, with no external aids, but the greatest barriers to overcome, the young genius, confident in himself and full of indomitable energy, climbed up the road to fame with a rare persistency and remarkable success. When he determined on going to Copenhagen without means of his own, and no prospect but that which faith in his own genius afforded him, his mother asked what he would do when he got to Copenhagen. "I shall become famous," was his answer, and his life and death have proved that this was no empty boast. We know him best as a writer of fairy fales and tales for children, but he is also well-known as a poet of no mean genius. He has also produced dramas, novels, and a host of miscellaneous writings. In his latter years, he seems to have been almost worshipped in his own country, all classes from the highest to the lowest vieing with each other in doing him reverence. And we suppose that hardly ever has the funeral of a literary man called forth such marks of national devotion as that of Andersen. Yet we believe it was long before his countrymen would recognise his merit. Almost the last country in Europe to do him jastice, was his own. His works were treated as of little value in Copenhagen, even at a time when children were familiar with them in most countries in Europe. But though no man could be fonder of praise than was Andersen, he was not one to be disheartened by the want of it, and when at last his fame and honour became greater than even he himself had anticipated, he seemed incapable of being spoiled by it. He was the loved of all while he lived, and seldom has a man of letters died who has been so universally missed and regretted.

***

WE have once or twice referred to the infamous Beecher case, as affording an unhappy indication of much unsoundness in the tone of health in some of our popular churches. We refer not merely to the congregation of Plymouth Church, but to the quarters from which so much sympathy has been manifested for Mr. Beecher. We see, however, that the weight of opinion in the American religious press is not in harmony with the spirit of Dr. Parker's telegram, although opinions differ to some extent. We quote from the *Scotsman*: The *Golden Age* is severe on Plymouth Church for its 'blind admiration of a scared and shattered man.' Its action in striving to restore the lost whiteness to its idol by gilding him over, is 'putting a premium of 80,000 dols. on unconvicted adultery'." The *Church and State* is all for Beecher. Dr. Talmage, on the other hand, in his *Christian at Work*, leans to Tilton's side. "But leaving aside the question of Mr. Beecher's innocence or guilt, it is easy," says this clericial brother, "to learn the lesson that married men, and especially ministers, ought to be very economical of kissing and writing love letters to other men's wives." The *Envangelist* thinks there is a "moral and legal presumption" in Mr. Beecher's favour; while the *Methodist* considers that he "remains under suspicion." The *Freeman's Journal* says Mr. Beecher "stands a self-confessed libertine, perjurer, buffoon, hypocrite." The *Working Church*, while it does not credit the main accusation, thinks there can be no question that the Plymouth pastor has destroyed his influence by his conduct.

***

THE *Statesman* observes that the Government of India "has at last determined upon appointing an officer to the task of examining, indexing, and reporting upon Sanscrit literature throughout the country," and that Dr. Burnell, Civil and Sessions Judge of Tanjore, has accepted the post. Should he, as we hope he will, justify the high opinion that seems to be entertained of him by Government, his name will deservedly stand recorded amongst the most illustrious of those Anglo-Indians who, from the days of Sir William Jones and Professor Wilson to our own, have laboured to render the treasures of Oriental learning accessible to western scholarship.

***

THE discussion upon the currency question continues, but it begins to be seen that the introduction of gold would be a gain not untempered with loss, and that the fall in the value of silver, though it bears hard on the receivers of fixed incomes and remitters to England, is probably productive of more good than harm to the country generally.

***

IT is significant of the real state of matters in Germany, and of the extent to which it is has been misapprehended in England, that the Minister of Public Instruction, Dr. Falk, whose name is so closely identified with the ecclesiastical legislation of Prussia, has just returned from what is fairly called a triumphant progress through the Province of the Rhine. The purpose for which the Minister visited the province was to inspect its colleges and seats of learning, and no one had the least idea that the visit would be made the opportunity for an ovation. At Treves, Cologne, and Dusseldorf, the Minister whose opposition to the Ultramontanes has gained for him their hatred, was received with acclamations. At Bonn and Cologne, processions were got up in his honour, and he was entertained in the latter city at a great banquet given by the wealthier class of the inhabitants. As these Rhenish cities are the strongholds of the priestly party, the demonstration is strikingly significant, and proves that in the most Catholic districts of Prussia there is an increasing party, consisting of men of all classes, that sympathizes warmly with the Government, and is prepared to strengthen its hands in its adoption of a national, in opposition to Romish, policy.

***

WHILE the opening up of the Yunnan trade route to China is being so long deferred, the French are making great progress in Cochin China. They have three open ports in Tonquin, and foreigners can travel into the interior under passport from the French Consul. About 2,000,000 of native population are under French sway, and, as any external or internal disturbance must be put down by French arms, territorial acquisition will be easily obtainable if desired.

***

THE original estimate of the cost of disestablishing the Irish Church was £8,650,000, amended after the final alterations in the Bill to £9,530,00. Even this estimate is exceeded, and the cost will not be less than £11,560,000. On the other hand the value of the Church property proves to be greater by three-quarters of a million than Mr. Gladstone supposed. The Commissioners reckon therefore upon a surplus of £5,180,000, notwithstanding the fact that the private endowments taken over by them in lieu of which a round sum of £500,000 was paid over to the Representative Church Body, is found to be only £350,000 with heavy liabilities to be met out of the sum.

IT is a great proof of the elasticity of French resources that the McMahon ministry is talking of converting the five per cent Rentes into 4½. The five per cent. debt represents 346 millions, and the *Economist Francais* believes that the conversion may be effected with facility if the Government will only guarantee the four and a half per cents. from any further conversion for ten years. It advises the postponement of the operation until the four and a half per cents. have risen to par. "The example of what took place in "England in 1822 it believes to be conclusive; 3,760 millions (francs) "of five per cent. stock were then reduced to four per cents., and the "conversion was only refused for a sum of 70 millions of francs."

What the English Chancellor of the Exchequer really did in 1822 was to convert *£140,000,000 of five per cents into a four per cent. stock; and in 1824 again £76,000,000 of fours into three and a half per cent.*

FORTUNE seems to have dealt severely with the rebellious subjects of the Porte. The siege of Trebigne was raised by the Turks on the 2nd instant, the insurgents retreating to the mountains. The consular conference at Mostar does not, however, seem to have effected much with the insurgents, who believed it to be under the influence of the Porte. What they demanded was the autonomy of Bosnia and Herzegovina under a European Prince paying tribute to Turkey. They depended, however, very greatly on the aid of the Servians, and of this they seem to have been deprived, for though the Servians were eager for the fray, Prince Milan had a keener eye than his subjects for prudential considerations. Accordingly the latest announcement is that Servia has promised to remain neutral. No more hands are to be allowed to cross the frontier, and the Turkish troops now traverse Herzegovina unresisted and almost without seeing an enemy.

***

"PROBLEMS of Faith" is the name of a small volume of lectures to young men published by Hodder and Stoughton which the *Examiner* notices in a contemptuous manner. One of the lecturers, William Carruthers, F. R. S., writes on scientific unbelief, and with reference to his lecture the *Examiner* has the following: "Mr. Carruthers attacks Sir Henry Thomson and Professor Tyndall, "but mentions no way of his own for proving the efficacy of prayer. "The usual practice, we believe, is to pray that what we want may "come to pass; then to do everything in our power to bring it to "pass; and lastly, if we succeed, to assert that it has been done "for us; or, if we fail, to conclude that it was not allowed to "*succeed*" *because success would not have* been beneficial to us. "The efficacy of bull-baiting and cock-fighting might be proved in "this way." This tone of shallow scorn, is exceedingly common in certain circles when speaking of the efficacy of prayer. It is very reprehensible, and is perhaps best met with silence by those who do believe in the efficacy of prayer.

THE RUSSIAN ADVANCE.

THE relapse which has overtaken us in this matter, is marked by this hopeful symptom that the delirium is partial only, and that enough consciousness remains for us to be aware that there is real insanity in some of the delusions that take possession of us at these times. Thus the *Statesman* has discovered that the attempt to invade India "from so distant a base as the Caspian, would be simple madness on the part of Russia;" the writer not knowing apparently, that the notion of her operating on any other base, was long since declared by Sir Roderick Murchison to be "a pure chimera, and almost a physical impossibility." Instead of "hunting up in Bedlam or elsewhere the "opinions of maniacs, who propose to launch a British "fleet on an inland sea like the Caspian," the *Statesman* implores us as "true English patriots to urge upon Government the avoidance of a great possible danger by disposing of the Russian advance, once and for all, *whilst Russia is still at a distance from the Indian frontier, and before her position in Central Asia becomes impervious to a flank attack from the Persian Gulf.*" A flank attack from the Persian Gulf, with Khiva and Merv distant only 1,200 to 1,500 miles, and the whole of Persia to be traversed to reach either! This does *not* come out of Bedlam. This is what we *ought* to do, and do "now while Russia is still at a distance."

We direct attention to these follies because nothing is perhaps more likely to bring discredit upon our attitude as a nation towards Russia, than to recal the history of that attitude from the first. At the commencement of the century, Russia was credited with a settled purpose of reducing all Europe to Cossack sway. That there was a danger of her accomplishing this, was a sort of accepted belief in Western Europe down to the Crimean War. One of the earliest memories of our childhood is associated with this belief, when Russia was the bogy of probably nine tenths of the nurseries of the United Kingdom. Profoundly ignorant of her real weakness for aggression, a latent fear of her advance westwards was one of the main causes of the interest taken by the west of Europe in the fate of the Poles. The fear was a tradition moreover of the French Empire, Napoleon justifying his fatal campaign to Moscow on the ground, that the only choice for Europe lay between its becoming French or Cossack. Now these delusions were popularly accepted as true, and they lasted with more or less influence upon Europe down to the Crimean war, when the real weakness of Russia for aggressive purposes became patent to the world. At the commencement of that war, Turkey was even seen resisting the whole might of Russia, single handed in Silistria. This inordinate estimate of the Russian power was probably at its height about the year 1830, when under the Emperor Nicholas she claimed very largely to control the policy of the West; and it was about this time that Russian pressure upon Persia began to awaken that alarm concerning India which has grown into panic at intervals ever since.

It is a fatal mistake for the Indian Government to be ministering to this alarm. During the Crimean war, the most preposterous stories were circulated in the bazaars of India as to the power of Russia, and the coming downfall of the British Raj. Lord Dalhousie objected to the withdrawal of troops from the country at the time, on account of the rumours that prevailed amongst the people regarding Russia, which was declared to have conquered and annexed England. Queen Victoria had fled and was coming to take refuge with the Governor-General. The notion that Russia will one day contend with us for the mastery of India, coming down in immense hordes from the North and bringing with her the intervening Mahommedan States to sweep us into the sea, is being nursed and fostered by the Press and the Government into a traditionary belief in the people, shaking their confidence in the stability of our rule, awakening mischievous hopes in deposed dynasties, and in our own Mussulman subjects, and the frontier tribes. Instead of disdainfully ignoring these wild expectations, we have a Foreign office that seems bent upon giving colour and substance to them, by its fussy and perpetual missions, and embassies, and disquisitions, and assurances, upon the subject. Ten years ago, we reasonably hoped that we had seen the last of this folly; the chief organs of opinion and the Government in both countries contemptuously declining to discuss the subject further. In April 1865, the *Times* wrote, "it is "to be regretted that this phantom of Russian aggression "should still find believers. We had hoped it had vanished "for ever, or that if it still found credence it was only among "a few survivors of a past generation." Sir Henry Rawlinson's ante-diluvian speculations on the subject have occasioned a relapse, and the press and the Government are once more repeating the folly of twenty years back. "We may wait" wrote the *Times* in the same year 1865, "with "confidence a movement that could only end in the "utter ruin of the invaders. An attempt to invade "India through Turkistan and Cabul would prove "the destruction of the army that attempted it." Human folly is ever repeating itself; but we owe small thanks to the men who become the occasion of its display. Sir Henry Rawlinson has learned nothing during the thirty years he has been playing the part of an alarmist. The invasion of India by Russia has ever appeared to others as to ourselves what it still appears, and what it appeared to every one ten years ago, "the dream of a nervous sleeper." The British power which has grown up during the last 120 years in India, and like the banian-tree is constantly sending forth its branches to strike new roots and add fresh security to the widely spread growth, is assumed in this dream to disappear with the rapidity of scene-shifting on the stage. We may add, what generally escapes the Anglo-Indian politician, that whatever the power threatening our possessions in the East at any time, the defence will begin and continue mainly, on other than Asiatic ground. The execution of such designs as those attributed to Russia could not take place without

a conflict in Europe, in comparison with which the war on the Indian frontier would be child's play. We are sufficiently English to believe that Russia is no match for England in any field, and that our next appearance in the Baltic and the Black seas, would leave a more enduring mark upon her than the last.

THE MORALITY OF THE BAR.

THE character of the English system of pleading, received a very striking illustration in the Divorce Court at Westminster a month or two ago, in the notorious case of *Gladstone* vs. *Gladstone*. From the record, there does not seem to have been room for the entertainment of any honest doubt whatever, as to the true nature of the case. Captain Gladstone had been found guilty of adultery, and his wife was entitled to a divorce; when having a large pecuniary interest in setting aside the verdict, he moved the Queen's Proctor to intervene on the ground that Mrs. Gladstone was in collusion with himself to obtain the verdict, and that she also had been guilty of adultery equally with himself. The man's motives for this course were quite plain, and the evidence on which he sought to sustain the countercharge against his wife, so manifestly suborned, that the jury without leaving the box, found a verdict for Mrs. Gladstone on all the issues, and asked whether an order could not be made by the Court for payment of her costs. The Judge-Ordinary expressed his full concurrence in their verdict and sympathy with their wish, but said he had no power to make such an order. The decree *nisi* for dissolution of the marriage was made absolute, and so terminated says the report "*one of the most protracted and bitterly contested suits* which have been litigated in this court."

Now, upon whom does the guilt really rest of this attempt by suborned witnesses to establish against Mrs. Gladstone a charge of "habitual adultery in a common brothel at Portsmouth," and of having abandoned the charge only at the last moment? Having reviewed the evidence in support of the charge, the Judge pointed out that it rested substantially on the statement of one Colville, a fly-driver, and that if it were false, the question arose where the perjury had come from. At the final interview between the petitioner and respondent in May 1874, and when the petitioner replied to the respondent's threat of bringing a countercharge of adultery against her, that he could not do so as she was innocent of the crime, Captain Gladstone rejoined: "But evidence can be got for money." That being the position of the parties, who were the agents employed by Captain Gladstone in getting up the case? No one said the Judge *would suppose that the Queen's Proctor would lend himself to anything inconsistent with propriety*, but the fact was clear that two men of the names of Baldwin and Arnett had been employed by Captain Gladstone in getting up the evidence in the case, and that the one had been guilty of subornation of perjury, and the other, who had been a servant of Captain Gladstone, imprisoned for stealing his master's clothes. With the view of placing the whole case fully before the jury, the Judge-Ordinary read from the shorthand-writer's notes, the whole of his summing up at the previous trial; and, while expressing his perfect satisfaction with the result of the inquiry on that occasion, told the jury that they were not bound by the verdict which was then given. They were entitled to look at the whole case, and in doing that, the best guide he could give to them was this—to put themselves in the position of the first jury and say whether, if the new evidence which had now been given had been given at the last trial in addition to the evidence which was then adduced, would have produced in their minds the conviction of the petitioner's guilt which the old evidence by itself had failed to produce. Having reviewed the supplemental evidence presented in the case, and commented on the fact that a charge of habitual adultery in a common brothel at Portsmouth had also been made against Mrs. Gladstone, but abandoned at the last moment, his Lordship concluded: "In the "observations of Mr Hawkins on the hardship which the law "has imposed on Mrs. Gladstone, in compelling her to bear the "costs of her defence in this inquiry, though you may find her "innocent of the charges made against her, the Solicitor-General "has expressed his concurence; and I trust, since that expression of opinion has fallen from the Solicitor-General, that "he will make use of his opportunities as a law adviser and "member of the Legislature to bring about a change in the law "which is imperatively required. I have already raised my voice "against that which I think is a grievous wrong. I trust that "the element of prejudice which it undoubtedly introduces into "these cases will be speedily removed, and that a jury, when "considering whether a suitor in this court is entitled to retain "the verdict which she has already obtained, shall not have "their judgments disturbed by the reflection that, even if her "innocence be fully established, she will have to bear the enormous cost of having her case investigated a second time."

Now, we want the reader to look at the words we have italicized above, and then at the following remarks. Neither the Judge-Ordinary nor the jury had a moment's doubt that Gladstone had suborned the evidence that was to blast his wife's reputation, while it secured to himself her fortune. But we are required by the Judge-Ordinary by the usual legal fiction to believe, that the Queen's Proctor had no complicity in this infamy. The Solicitor-General, who represented him, is of such feeble intellect that he really believed the witnesses whom he put into the box to destroy this poor lady. Let the reader mark this gentleman's address to the jury. The extract is long, but we want the public to read it: "Mr. Hawkins had appealed to them not to find a verdict on any of the issues against Mrs. Gladstone, because the consequences of doing so would be, according to his learned friend, not only to prevent her obtaining the divorce to which he said she was entitled, but also to send her back to the arms of a husband whom she could no longer love—a man who had been unfaithful to her and who had treated her with great cruelty. His learned friend, he thought, was mistaken as to the consequences to Mrs. Gladstone of an adverse verdict, but with those consequences, whatever they might be, the jury had nothing to do. It might be that the law was hard, but with the hardship of the law they had no concern. The law said that a wife who herself had been guilty of adultery should not be able to obtain a divorce; and if he established upon evidence which satisfied their minds beyond all reasonable doubt that Mrs. Gladstone had been guilty of adulterous intercourse with Captain Bridgford or Captain Durnford, then, no matter what consequences her guilt might entail upon her, she would not be entitled to a decree. It was said that the Queen's Proctor had intervened in the interest of Captain Gladstone. He had done nothing of the kind. It might be that Captain Gladstone desired that his wife should not obtain a divorce; but with Captain Gladstone, speaking for the Queen's Proctor, he had no concern—with him he had no sympathy whatever. He had no desire, and the Queen's Proctor had no desire, to aid Captain Gladstone in the least degree. What the Queen's Proctor desired was to discharge the duty which his office imposed upon him, and when he had discharged that duty, whatever the result might be, he would be satisfied. Complaint had been made of the manner in which the general charge of misconduct against Mrs. Gladstone had been withdrawn; but no blame attached to the Queen's Proctor in the matter. He had received information which led him to the belief that Mrs. Gladstone had been guilty of adultery at a house in Battery-row, Portsmouth, but when his counsel had the opportunity of scrutinzing the evidence upon which it rested, they came to the conclusion that it was not evidence which could be relied upon, and accordingly determined to withdraw it from the consideration of the jury. If the matter had come earlier before them they would probably have withdrawn the charge long ago, but until they had made up their minds to withdraw it, it was not in the power of the Queen's Proctor to do so. No doubt also, if Mrs. Gladstone were innocent, it was a hardship that she should be called upon to litigate at her own cost the issues raised by the Queen's Proctor's intervention. But that was the law. With many others in the profession, he should like to see the law altered. He should like to see it in the power of the court, when an intervention by the Queen's Proctor was not successful, to order that the costs of the successful party should be paid by the State; but for the law as it stood the Queen's Proctor was not responsible. The jury, however, should not

allow themselves to be seduced by arguments founded on hardship from a calm and dispassionate consideration of the case. They might compassionate Mrs. Gladstone: they might sympathize with her; but they should not, in the discharge of a stern and imperative duty, allow their sympathy and compassion to get the better of their reason." After these prefatory remarks, the Solicitor-General proceeded to comment on the evidence adduced in the previous trial of the case in support of the counter-charge of adultery with Captain Bridgford, made by Captain Gladstone against his wife, and observed at the outset that he made no complaint of Captain Bridgford's evidence on the present occasion. He would not for a moment say that it was incumbent upon Mrs. Gladstone to call in her defence Captain Bridgford. He was away in Japan, and it would be unreasonable to expect that she should delay the trial of the case which was so vital to her until Captain Bridgford had returned to this country. But this the jury should bear in mind, that apart from her own contradiction and that of Captain Durnford, her defence rested substantially on the evidence of Captain Bridgford's servant, Paul Fry, Mr. Foster, the architect, and Sergeant-Major Dyer, and that, if a guilty woman, *she had every motive which could actuate the human mind to screen her guilt by falsehood*—a remark which applied also, though in a less degree, to Captain Durnford. Having reviewed the evidence, both original and supplemental, given in the case, the learned gentleman admitted that *the charge of collusion could not be maintained* and that the evidence in support of the charge of the petitioner's adultery with Captain Durnford was by no means of a satisfactory character. But he submitted that it received force from the circumstances disclosed in the case as it regarded Captain Bridgford; and as to that particular case, he contended that it was impossible to conclude that all the witnesses on whose testimony it rested had been mistaken, or that, without motive and at the risk of prosecution, they had come into court and sought by perjured testimony to accomplish the ruin of a woman who had never injured them."

Could anything, we ask, be more disgraceful than the prostitution of ingenuity which this address shews, to sustain a case which the speaker himself plainly felt was an infamy throughout. *Not until* the very last moment does this lawyer admit "that the charge of *collusion* could not be maintained," but yet he does not hesitate to urge upon the jury—under the false sense of duty imposed upon himself—that Mrs. Gladstone had really been guilty of adultery. But the charge of *collusion* was everything; and yet seeing and knowing that charge to be false before he opened his lips, the false morality of the Bar required him as he thought to keep that admission back to the very last, and to do what he could to offer up this poor lady as a sacrifice to the fine sense of duty to his employers that moved him. We cannot deal adequately with such conduct ourselves. Let Ruskin blast it for us.

"You, good reader, probably have read the trial in Pickwick, and the trial of Kit, merely to amuse yourself; and perhaps Dickens himself meant little more than to amuse you. But did it never strike you as quite other than a matter of amusement, that in both cases, the force of the law of England is represented as employed zealously to prove a crime against a person known by the accusing counsel to be innocent, and, in both cases, as obtaining a conviction?

"You might perhaps think, that these were only examples of the ludicrous, and sometimes tragic, accidents which must sometimes happen in the working of any complex system, however excellent. They are by no means so. Ludicrous, and tragic mischances must indeed take place in all human affairs of importance, however honestly conducted. But here you have deliberate, artistic, energetic, dishonesty; skilfullest and resolutest endeavour to prove a crime against an innocent person—a crime of which, in the case of the boy, the reputed commission will cost him at least the prosperity and honour of his life—more to him than life itself. And this you forgive, or admire, because it is not done in malice, but for money, and in pride of art. Because the assassin is paid, makes his living in that line of business, and delivers his thrust with a bravo's artistic finesse, you think him a respectable person; so much better in style than a passionate one who does his murder gratis, vulgarly, with a club, Bill Sykes for instance? It is all balanced fairly, as the system goes you think. 'It works round, and two and two make four. He accused an innocent person to-day: to-morrow he will defend a rascal.' And you truly hold this a business to which your youth should be bred—gentlemen of England?"

Observe the admitted fact in this Gladstone case, that if there was no collusion, there was no room for the Solicitor General's appearance at all. In his summing up the Judge pointed this out emphatically: "There were two issues "to be determined by the jury. One was—had the parties "been guilty of collusion? The other—had Mrs. Gladstone "been guilty of adultery with one or other of the persons "named in the charge? The Solicitor-General, at the 11th "hour and 59th minute, stated that there was no evidence "which he could properly rely upon in support of the issue "of collusion. Now, the Queen's Proctor was only entitled "to intervene in the event of his having reason to believe and "suspect that there was collusion; and he being a public officer "had intrusted to him certain powers, certain privileges, and "certain advantages in the event of his intervening, on the "ground that there had been collusion. On the other hand "Mrs. Gladstone was subjected to commensurate disadvantages "in consequence of the Queen's Proctor's intervention upon "that ground. It was evident, therefore, that the Queen's Proctor "ought not to intervene upon the ground of collusion, unless "there were really reason to suppose that such a charge could, he "would not say, be established, but that there would be reasonable evidence to be submitted to a jury upon the point, and "that at any rate, if in the course of the investigation of the "case it became clear that the charge could not be sustained, "the earliest possible moment should be selected for its withdrawal."

But it was not. The admission was kept back to the very last moment. And yet there was no immorality in what was done: and the Court true to the order to which itself belonged dared tell the jury that it was not "personally" important to the Queen's Proctor how he had acted, and that the Court entertained not the "slightest doubt of the propriety of his conduct "in the discharge of his duty. He of course was obliged to "trust to third persons, but for whom, however, he should be "responsible." And with this precious contradiction to save appearances, the case falls still-born upon the public. The whole system is false and bad. If the Judge had done his duty to society instead of to his 'cloth,' he would have put a mark upon the Queen's Proctor and his counsel the Solicitor-General, that it would have taken them some time to wash off. They go into Court knowing that there was no real ground for their doing so, and after hypocritically professing how much pain it occasions them to suggest that this poor lady is everything that is vile, wipe their mouths and say what evil have we done?

THE CONSERVATIVE REACTION.

"IN society, listless luxury seeking only new ways of killing time and wasting money: In politics, a well intentioned but feeble ministry, led by a once brilliant trifler, hardly persuading a Parliament of middle aged nonentities to leave squabbling over questions of privilege, to attend to Bills which when passed into law will leave the matters they deal with much as they were before: In religion, a Church whose standing need is to be made as compehensive in theory as she is in name, and in practice, being destroyed by hostile parties within her, each in their own way, by persecution or exclusive principles, striving to reduce her to the condition of the narrowest of sects: and while claiming for her all the privileges of a national Church, rapidly alienating from her the sympathies of the nation." Such are the characteristics of the time in England, which some call one of rest after over exertion, and others stigmatize as one of utter stagnation. But it will be said that, so far as regards the political sphere, call it rest or stagnation, such a tranquil period naturally follows one of movement. How naturally? Because such is the temper of the electorate. But is that temper natural? We maintain it is not. The history of the

late reaction was in this wise. The people were stirred to enthusiasm on a great question, and brought the reformers into power. What they called for, was quickly done. But the men to whom they had given power were not men of that one idea. They wanted to carry reform not on that question alone, but in other directions in which is is needed. We do not write as political partizans, but it seems to us incontestable that the nucleus of the Conservative party is to be found in the selfish and comfortable classes who have all they want, and who forget the condition of the mass of their countrymen. The desire for rest so much talked of, as felt by the country, was felt by these men alone. And when they had an opportunity of enforcing their desire, they knew and seized it. They "lied" the Liberal Ministry out of office and the so-called temper of the electorate was produced by the calumnies against the administration which its opponents vented with unmatched hardihood. And they met with success simply because the voters of 1868 had not voted on principle, but to secure a single point: the disestablisment of the Irish Church. There being little or no opinion on any other question, it was easy to meet an adverse opinion by dint of persevering and ingenious abuse. In the absence of all public opinion, those who were most industrious in creating one were successful. The want is to create a public opinion in favour of progress all round and continuously, not here and there and by fits and starts. For we are not as yet so near the goal which is to secure a measure of happiness for every household in the country, that we can afford to relax in our efforts to reach it. And this a Conservative reaction distinctly and avowedly does. It substitutes a slackened for a just rate of progress, replacing those who wish to do as much, by those who try to do as little, as possible. Something is wanted which will make the electorate insist on steady advance, not the permissive progress so dear to a Conservative Government, but good honest progress all round. Take for instance the drinking question. Without for a moment wishing to countenance the fanaticism of those who because many ruin themselves by the abuse of God's gifts, wish to deprive the rest of the world of the opportunity of using them; without endorsing the principles of Good Templarism or Teetotalism, it cannot be denied that drunkenness is an awful curse to England. But when an attempt is made to abate it, what is the result? The people allowed themselves to be persuaded by the publicans that Lord Aberdare's Licensing Bill was fraught with danger to the nation, and compelled its withdrawal. No statesman supports the Permissive Bill, simply because it would not work, and would bring the whole temperance movement into disrepute. But Lord Aberdare's Bill was a different thing, and if the constituencies had had any principle to go upon, any standing desire for the general good, they would have backed it unanimously. But they had none: and they must be inspired with one. Political agitation is only of transient effect. Political principle will not supply what is needed, a motive power constantly operating, inspiring a public opinion that will not think the work is done when one or two great measures are passed, but will set steadily and continuously in favour of progress. And nothing but religious principle will we believe supply that. But "religion, even more among dissenters "than the Church, has lost the power of reaching the heart of the "masses of the people. Men sigh for reformation and revival. "With the best intentions, and possessed with a new and tender "regard for humanity, they yet cannot bridge the gulf that se- "parates the wicked, the miserable, the lost, the ignorant, and "the hopeless from the fellowship of Christian men. What "Christian man surveying civilisation in England shall dare to "abide by the old fashioned test: 'Go' show the things that ye "do hear and see?"*

What is needed, and what we long for, is the time when "the "new ideas of religion—of which the actual living Fatherhood "of God will be the essence—shall seize like a prophetic burden "upon the spirit of some gifted man, and enable him to "realise and make others realise with him, in the clear light "of science, the appalling gulf that lies between men "and things as they are, and men and things as they "ought to be, and might be, now and here." That will be a movement which will not only give a permanent and constant impulse to political progress, which is the thing we are seeking for, but will cure much else that is evil under the sun. It will purify society of its devotion to frivolity. Frivolity has its uses, but it should not be the ruin of the life. It will lead earnest but quarrelsome religionists to give up fighting over trifles among themselves, and join in an undistracted effort in the great quarrel with sin and misery. In a word, it will band the nation together to extirpate moral evil, in a league united by the most potent of links—common possession of some portion of the spirit of Christ.

* *Macmillan's Magazine*, August 1874, page 341.

N.-W. CIVILIANS.

WE were aware many months ago, that a note by Mr. Elliott on the subject of these gentlemen's grievance had been submitted to the Supreme Government. But it is believed that Mr. Elliott had not much sympathy with his fellows, and was too much disposed to ignore their grievance as non-existent, or as capable of redress by simpler means than were usually proposed. Neither Mr. Elliott nor Sir William Muir are credited by the service generally with a just sense of the wrong we have done these gentlemen, and although their claims were not perhaps treated with positive contempt, still as a matter of fact, they were systematically shelved. Diplomacy as an art, is said to consist in saying "No" in such a way as to leave the person denied as grateful as if his request had been granted. In this art it cannot be denied that the Government has made some progress, and this explains perhaps how it is that these gentlemen are still as loyal as any other servants of the Crown. We can form a guess at the system propounded by Mr. Elliott, if the hints he now and again gave of his views on the subject, may be taken as a guide to his written expression of them. The scheme which he favored was we believe, that of a yearly increment of salary, by Rs. 50 to the monthly pay of the junior civilian after he had passed the higher standard of the departmental examinations until the salary reached Rs. 1,000, and then an annual increment of Rs. 100. Another scheme, but whether favored by Mr. Elliott or not we cannot say, is to redistribute the districts of the N.-W. P., making forty-one out of the existing number of twenty-seven. Those who bring forward this scheme are of opinion that the districts are at present too large to be satisfactorily adminstered by the existing establishments, in consequence of the enormous increase of work in recent years. The Magistrate and Collector of a district, is heavily overburdened by departments crying ceaselessly for information; each department fancying the unfortunate Collector its particular servant and having nothing to do but answer its references. The number and elaborate character of these references, are little known to those who have no personal acquaintance with the files of a Collector's office. Placed before any ordinary man unaccustomed to the task, they would simply appal him. How they are answered, or if they ever are answered, we cannot say; and probably the knowledge possessed in the Secretariat of the very imperfect way in which, with all his office work, a Magistrate and Collector can become acquainted with his district, has led to the idea of giving him a smaller area to administer.

It is possible that this would be a benefit to the State, however distasteful to the Service might be the increase of small civil stations, where a dead-and-alive life would be passed by the local ruler similar to that prevailing in these Lower provinces. The necessity of such a redistribution of districts and the increase of their number should be made indubitably clear; and we think that reform in this respect should be looked for in another direction. Instead of making the Collector the referee of every department, on questions which often require a special or scientific knowledge which few Indian magistrates either possess or ordinarily require, the departments should have attached to them local officers selected for their proficiency in the special range of subjects

embraced by them. Instead of a Collector being called upon, under orders from the Board of Revenue, at the request of the Secretary to the Government of India in the Agriculture and Commerce Department, to furnish a disquisition on "fibres," concerning which the unhappy Collector and his subordinates probably know no more than Adam, an officer who had made the subject his special study would submit, for any reasonable number of districts to which he might be appointed for the purpose, a tolerably accurate and useful return. Under the present system, the Board's letter is almost contemptuously passed on by the Collector to his youngest assistant, who places it in his cutcherry box, until he can snatch a few moments from his regular work, that is always sufficient to occupy his time. He then makes a hurried translation of the circular by the help of a dictionary for the scientific terms, floundering wofully in the attempt. The Circular is despatched to the tahsildars with orders to reply within a week. The tahsildars are much too busy in collecting arrears of land revenue, making roads, attending to the local municipality, &c., to even read the rubakari. Some hanger on at the tasili, generally the kanango's gomashta or "honorary assistant," prepares an answer to the reference. In this way answers arrive from the various tahsilis in from one to six months, and if there is a translator" on the Collector's establishment, that official has to prepare an abstract of them in English, when a resumè of this abstract translation reaches the Secretary to Government in the etcetera Department some nine months after the original letter of enquiry; and we leave the reader to decide whether the document is worth the paper expended in its preparation. The system we have suggested would, as opposed to the one now in practice, leave the Magistrate and Collector to his own specific duties, and we do not think these would then be beyond the powers of the men who hold that office to do efficiently, without any diminution of the area of the districts as now constituted.

ZANZIBAR.

FROM the Administration Report of Her Majesty's Political Agent and Consul-General at Zanzibar for 1873-74, it appears that the principal revenue of Syyid Burgash Bin Said is derived from customs duties, which are farmed by the Bombay firm of Jairan Sewjee. The sum annually paid for the farm is $3,00,000; but it is understood that the total purchase money amounts to $5,40,000, the balance being devoted to the payment of a debt due by His Highness to the farmer. The lease will expire in August 1876, and by that time, it is supposed, the whole of the debt will have been cleared off. The Sultan, in order to hasten its liquidation, has lately begun to levy vexatious and restrictive duties upon coast produce; a matter which will be dealt with by the Consul-General in a separate report. His Highness's private estates bring him in a revenue of $25,000 per annum, with a view to increase which he has lately turned his attention to sugar planting, but with little success, the changeable climate of Zanzibar not proving so well adapted to the growth of the cane as was hoped some years ago. The loss of revenue consequent upon the abolition of the sea-borne slave trade, is estimated at less than £9,000 per annum. This is not a very large sum, and as the Sultan's total income will, according to the figures given, amount at the end of August next to $5,65,000, it is difficult to understand how any claim for compensation could ever have been based upon it, or taken into serious consideration by Her Majesty's Government.

The slave trade seems to be as far from being abolished as ever. The Consul-General complains that though the Sultan does his best to carry out the treaty, the inland traffic is increasing, and will, unless speedily checked, attain even greater dimensions than the maritime traffic which we have made such exertions to suppress. The foreign commerce of Zanzibar is now almost entirely carried on in British bottoms, and the principal merchants are British Indian subjects, of whom upwards of 4,000 are settled in the country. The Consul-General reports that business has not been brisk of late, the action of Government with regard to slavery having unsettled the minds of the mercantile community, who scarcely know whether to consider present arrangements as final. The depression will, in the Consul-General's opinion, continue to be felt until a radical change has been effected in the conditions under which the commerce of the East coast is carried on. Ivory the staple product of the Sultan's dominions on the mainland, is at present, for various reasons, almost excluded from the Zanzibar market; and the unsettled state of the Somali ports, which are the chief emporia for the trade in hides, is causing the German firms to take into serious consideration the advisability of discontinuing their local agencies. Agriculture has not yet recovered from the effects of the hurricane of April 1872, and on the whole, Zanzibar does not appear to offer a particularly eligible field for the employment of capital at present. The country, however, possesses such natural resources that the final extinction of the slave traffic, may be expected to lead to the development of a large and lucrative legitimate commerce hereafter.

BENARES AND THE PRINCE OF WALES.

A VERY enthusiastic meeting to prepare for the reception of the Prince of Wales has been held in the old Mint, now the property of a local Maharajah, at Benares. About eighty gentlemen were present, who testified their interest in the approaching visit of the Prince of Wales, by subscribing nearly Rs. 70,000 for a Hospital commemorative of the Royal visit to the sacred city of the Hindoos. Mr. Carmichael, the energetic commissioner presided, and on either side of him sat the Maharajahs of Vizianagram and Benares while lower down the room, a score of minor Rajahs and Mogul Mirzas might be counted. The Commissioner commenced the proceedings with a short speech, in which he stated that the meeting had been called at the desire of the residents of the city. The Maharajah of Benares then proposed that a spacious hospital be erected in commemoration of the royal visit; and remarked that, after consultation with his friends, he was able to affirm that this proposal would meet with general acceptance. He begged the President to present to His Royal Highness, on his arrival, the humble request of the residents, that he would be graciously pleased to lay the foundation-stone of the proposed hospital and concluded by offering to bear all the expences connected with that ceremony. He was followed by the Maharajah of Vizianagram, who seconded the proposal. Rajah Shiva Prasad C. S. I., then spoke at some length and with ability in support of the proposal. The Rajah began by reading out the following list of subscriptions :—

	Rs.
H. H. the Maharajah of Benares	25,000
H. H. the Maharajah of Vizianagram	15,000
Baboo Guru Das Mitra	6,000
Rajah Shambhú Narayan Sinha	5,000
Family of the late Rajah Patnimal	7,000
The Mahomedan Community of Benares ...	5,350
Baboo Madho Das	1,500
Baboo Mahabir Parshad and Haridas	1,000
Rajah Shiva Parshad, C.S.I....	500
Baboo Madhu Das and Baboo Madhu Sudan Das ...	300
Raghunath Parshad Baijnath	200
Baboo Gobind Das	200
Baboo Seeta Ram Kesharam	200
Baboo Bhagwan Das	200
Shio Dutt Gir	100
Bihari Puri	100
Rao Beni Ram	100
Moonshi Ram Pratab	100
Munshi Beni Lal	100
Baboo Batak Dayal	100
Baboo Futteh Narain Singh...	100
Baboo Umrao Singh	100
Other sums	285
... Total Rs. ...	68,535

Rajah Shiva Prasad set forth in glowing terms the object and probable results of the Prince's visit. He told his hearers that in the olden time the ancient Kings of India regarded the Caucasus as the end of the world, all beyond being regarded as the dark abode of evil spirits and malignant demons. Now, in the year of grace 1875, a great Prince was coming from beyond the Mountain Caf—as the Caucasus is still termed by the Hindoo;—a prince greater in power than any other in the world. Under the Queen's rule India had prospered well. Without the present peace the merchant would have had no gains; and the poor and helpless little charity. "It is a good and right thing, therefore," said the Rajah, "that we give liberally towards this proposed hospital in commemoration of the visit to Benares of our future ruler." Syed Ahmed Khan Bahadoor, in a vigorous address, dwelt upon the

character in which the Prince would appear before the people of the country. His Royal Highness, he said, would not come robed in scarlet and gold. His greatness consisted not in a grand carriage or a velvet tent. He needed none of these things to prove that he was a powerful Prince. His greatness was of another kind, and far more imposing. Baboo Gooroodas Mitter, the head of the Bengalee community of the city, also spoke, and in a few terse sentences, urged his audience to come forward in support of the project. But there needed little urging, and we should not wonder if a lakh and a half is not subscribed before the arrival of the Prince.

An executive committee was then formed. Mr. Carmichael will be President and the Rev. M. A. Sherring, who has taken an active interest in the matter, Vice-President. Dr. Hooper, the popular Civil Surgeon was appointed Secretary, and Rajah Sambhu Narayana Sinha Joint-Secretary. Among those present we noticed Mr. Brodhurst, Judge, Mr. T. B. Tracey, Collector, Mr. T. Church, Joint-Magistrate, Dr. Hooper, Colonel Byers, Major Dixon, Captain Reid, and Baboo Aisvary Narayana Sinha.

ETERNAL PUNISHMENT.

THE distress with which the doctrine of eternal punishment fills thoughtful and sensitive minds, and the scrupulous avoidance of it in our pulpits, constitute sufficient reason for attempting to force its discussion upon the Christian world. Is the doctrine true or false? Is it taught in the Bible, or is it simply a human tradition? We hold the doctrine to be an impiety and blasphemy, a doctrine not taught in the Bible, but imported into Christianity from the old Greek philosophy, which taught—what the Bible does not teach—the necessary immortality of the soul. We must wait the disclosures of the last day, to know the mental sufferings and the demoralization which the grafting of this doctrine upon Christianity, have produced in every age; and we cannot but think there is something cowardly, when the issue has been once fairly raised, in the careful avoidance of it which the modern pulpit shows. For if this doctrine is part of the truth which God has revealed to man, it is the business of the pulpit to make it clear that it is so. If, on the other hand, the doctrine is *not* in Scripture, but its rise and origin in the Church are to be clearly traced to the influence of Greek philosophy thereon, what are we to say of a pulpit that is silent upon the subject? Will it be said, that it is a subject that ought *not* to be made part of the burden which the pulpit bears? The attitude of most preachers' minds upon the question, may be described as a taking refuge in the belief, that "it is safest to say nothing about it." The tradition has grown hoary with the weight of sixteen hundred years upon it: Who then are we, that we should be wiser than our fathers? Whether is it more likely that these should be wrong, than that we are right? And so the protests and misgivings of the thoughtful few in every age, are overborne by the weight of numbers. But a generation has arisen that will take, no answer but one that will satisfy the human reason and conscience, and that appeals simply to the Bible itself. We would if possible, compel our missionaries and chaplains to make up their minds clearly, whether the doctrine of Eternal Misery belongs to Christianity or not. In no other field could the question be forced on the consideration of the Church with so much advantage. We profess to believe that our mission in India, under Divine Providence, is to spread the knowledge of Christ therein. What if we find, that the first fruit of attempting this, is the clearing up of our own conceptions as to what Christianity really is? If Evangelicalism with the doctrine of Eternal Torments tacked on to it, is really Christianity, we refuse to tell the people that we are bringing "glad tidings" to them. We say that we are bringing to them the most dreadful tidings the human ear can hear. And so half true or so false are we, that we refuse to see this. A lady wrote to us privately, some time ago: "I "have often felt as if I would go mad, while thinking over this "doctrine, and all I could do was to put the thought from me as "often as it presented itself in all its horrors." This simple testimony came from no heart that *wished* the doctrine untrue, because the life was unholy. The doctrine does not bear to be thought about without insanity: and we avow our full conviction that it is an impiety and blasphemy countenanced nowhere in Scripture, and opposed to the entire scope of its teaching.

The Church, by means of her glosses and formularies, has given a meaning to the Greek terms used by the Apostles, to describe the end of the ungodly, at which they would have stood aghast, since they used the words in the sense attached to them at the time when they were recorded. The student will find that this doctrine of Eternal Torments was mainly the work of Tertullian and Cyprian, led away by the neo-Platonic speculations of the second and third centuries, into substituting the Greek doctrine of the necessary immortality of the soul for the doctrine of the Jewish Scriptures, that the soul is not in its nature immortal, but that Eternal Life is the gift purchased for mankind by the Saviour, for those who are united to him by a living faith. The first Christian author of note, whose writings are extant, that denounced unambiguously eternal torments, is the well-known African Tertullian of Carthage. He wrote in the close of the second and the beginning of the third century and his meaning is not to be mistaken, nor his spirit.

"You are fond," he says, "of your spectacles. But there are other spectacles. That day which is disbelieved, derided by the nations, the last and eternal day of judgment when all ages shall be swallowed up in one conflagration, what a variety of spectacles hall then appear! how shall I admire, how laugh, how rejoice, how exult, when I behold so many kings and fallen gods in heaven, together with Jove himself groaning in the lowest abyss of darkness! so many magistrates, who persecuted the name of the Lord, liquefying in fiercer flames than they ever kindled against Christians! so many sage philosphers blushing in raging fire, with their scholars whom they persuaded to despise God, and to disbelieve the resurrection, and so many poets shuddering before the Tribunal, not of Rhadamanthos, not of Minos, but of the disbelieved Christ. Then shall we hear the tragedians more tuneful in the expression of their own sufferings; then shall we see the dancers more sprightly amidst the flames; the charioteer all red hot in his burning car; and the wrestlers hurled, not upon the accustomed lists, but upon a plain of fire."

This teaching came not from above. No heathen hatred, no heathen cruelty, could have wrested such language from the Apostles. Truth disowns it as an impeachment of the divine goodness, and revolts from it with loathing and horror.

Cyprian was an ardent follower of Tertullian, and the fact prepares us to expect that he would imitate him in his teaching. There is much, doubtless, in the writings of both very deservedly valued; but this renders it only the more requisite to point out their error in the dogma we are treating. The following is Cyprian's frightful expression of it: "Gehenna, ever burning, will prey upon the damned, a devouring punishment of burning flames; torments that can have no respite or end. Their souls will be preserved with their bodies for the pain of endless tortures. Then shall he who made a brief spectacle of us be himself a spectacle for men, *and the transitory joy of cruel eyes in our persecutions shall be repaid with a perpetual vision*, according to the Holy Scripture which saith, "Their worm shall not die, and their fire shall not be quenched, and they shall be a spectacle to all flesh." '?

Cyprian believed while thus writing, that the tortures experienced by the enemies of the Church would be to him a gratifying requital for the wrongs which those enemies had inflicted. He *felt* that he could enjoy such a spectacle. He derived present comfort from a prospect so dreadful. And the fact that he did not know himself makes it more probable that he did not know his Maker. It would be an irksome, and useless task to multiply quotations like the foregoing. From century to century, up to the one in which we live, the doctrine has been generally taught, and in word accepted. Here and there dissentients like Origen, had many followers; but the *avowed* rejectors of the doctrine have been a small minority. From writers of a comparatively recent date, two or three quotations shall be added.

In his discourse on the 'Pains of Hell,' we have this from the pen of Jeremy Taylor: 'We are amazed at the inhumanity of 'Phalaris, who roasted men in his brazen bull: this was joy in 'respect of that fire of hell, which penetrates the very entrails 'without consuming them.' 'Husbands shall see their wives, 'parents shall see their children, tormented before their eyes.' 'The bodies of the damned shall be crowded together *in hell like* 'grapes in a winepress, which press one another till they burst.' 'Every distinct sense and organ shall be assailed with its own 'appropriate and exquisite sufferings.'

Jonathan Edwards, without a doubt or a scruple, writes in these horrible terms: "The world will probably be converted into a great lake or liquid globe of fire, a vast ocean of fire in which the wicked shall be overwhelmed, which will always be in temptest, in which they shall be tost to and fro, having no rest day or night, vast waves or billows of fire continually rolling over their heads, of which they shall for ever be full of a quick sense within and without; their heads, their eyes, their tongues, their hands, their feet, their loins, and their vitals shall for ever be full of a glowing, melting fire, enough to melt the very rocks and elements also they shall be full of the most quick and lively sense to feel;

the torments—not for one minute, not for one day, not for one age, not for two ages, nor for hundred ages, nor for ten thousands of millions of ages one after another, but for ever and ever, without any end at all, and never, never be delivered ! '?

The author of this hideous passage wrote the well-known book on 'The Religious Affections,' but it seems never to have occurred to him that this was not quite the way to promote childlike love of the Almighty. Neither does he seem to have asked himself whether it was credible. Terror was to promote the obedience which a wiser writer taught was worthless without charity. Now we may justly ascribe to such teaching, a large portion of the evils of Christendom especially its frightful cruelties. Men, not by nature amiable, becoming familar with such thoughts, and accepting them as true, could hardly fail to be cruel. It were hard to conceive anything more horrible than Newman's utterances in his sermon on "Neglect of Divine Calls and Warnings," Oh, terrible moment for the soul, when it suddenenly finds itself at the judgment-seat of Christ ; when the Judge speaks and consigns it to the jailors, till it shall pay the endless debt which lies against it ! "Impossible ! I a lost soul ?—I separated from hope and from peace for ever ? It is not I of whom the Judge so spake ! There is a mistake somewhere. Christ, Saviour, hold Thy hand ; one minute to explain it. My name is Demas—not Judas, or Nicholas, or Alexander, or Philetus, or Diotrephes. What ! eternal pain for me ! Impossible ! it shall not be !" And the poor soul struggles and wrestles in the grasp of the mighty demon, which has hold of it, and whose every touch is torment. " Oh, atrocious !" it shrieks, in agony, and in anger too ; as if the very keenness of its infliction were a proof of its fnjustice. A second ! and a third ! I can bear no more ! Stop, horrible fiend! give over : I am a man, and not such as thou ! I am not food for thee, or sport for thee. I have been taught religion ; I have had a conscience ; I have a cultivated mind ; I am well versed in science and art ; I am a philosopher, or a poet, or a hero, or a statesman, or an orator, or a man of wit or humour. Nay I have received the grace of the Redeemer ! I have attended the sacraments for years ; I have been a Catholic from a child ; I died in communion with the Church ; nothing, nothing which I have ever been, which I have ever seen, bears any resemblance to thee, and to the flame and stench which exhale from thee, O enemy of man ! Then after much of what men were saying respecting this sinner while the fiend has hold of him, the passage concludes with these words : ' His soul is in hell, O ye children of men ! While thus ye speak *his soul is in the beginning of those torments in which his body will soon have part, and which will never die.*"

No one will dispute the dramatic power of this writing ; and had we simply to express the terrible without regard to what could be believed, we should count it a model of fearful warning. If men credited such teaching they would be utterly deterred from outward acts of sin and some made maniacs ; but how far it would promote the holiness of which love is the chief element, we may well doubt. Happily men are so constituted that they do not, will not, cannot believe it. Such a doctrine, they feel instinctively, casts mercy and pity to the winds. If it be in the Bible, they will reject the Bible. * This controversy concerning the right nature of the missionary message in the country, is of the last importance to India. It is our own conviction that her people will be converted only in the same way, and by the same means, as the pagan Greeks and Romans were in Apostolic days. A St. Augustine or St. Boniface baptizing a ' nation' in a day, from the King downwards ; such is the aspiration of the Church, and may truthfully be described as the Roman one—that of the great St. Xavier. The Evangelical conception is different. It neither looks for, nor expects, the baptism of men in multitudes. But let the missionary take care that the Gospel he is bringing to the people, is really the glad tidings of Christianity, and not a belief that no human heart that deals honestly with itself, can reconcile with the Divine character.

The teaching of *this* impiety has invested the Scripture doctrine of an election to Eternal life with so dreadful an aspect, that it has made men, at last venture upon being more merciful than God, by taking " the gift of Eternal Life" out of His hands and promising it to all who will seek it in the sacraments. What the Saviour himself declares to be an exercise of the divine prerogative, the Church promises to all who partake of the Mass. The Scriptures teach that no man can become a partaker of Christ but by a faith that is the gift of God only, while the Church assures us that this membership is to be obtained by taking part in a round of ordinances, of which—in the development she has given them—not a trace is to be found in the Scriptures. It is an attempt on the part of a body of men calling themselves " the Church" to invest themselves with the power of conferring what is really the gift of the divine sovereignty. And so " the Church" promises salvation in the sacraments, while the Scriptures declare that nothing is of any avail, but the great change therein described, as " being born again of the word of God." The Apostle St. Peter gives the same account as St Paul of the means by which men were " saved" under their ministry. He says " they were born again of the Word of God which liveth and abideth for ever ;" and, that there might be no doubt of his meaning, adds, the " Word which by the Gospel is preached unto you." These texts are not casual : they reflect the teaching of the entire Bible from the beginning to end. Instead of sacramental grace, it is the Divine Word all through. There is no uncertainty, no inconsistency, in its statements. The doctrine of Eternal Torments forced the Church into a belief in Purgatory and the Mass ; and the re-establishment of Scriptural truth in their room, will be the death blow of the whole Romish system.

* We take the substance of the above extracts and their setting from the Revd. J. Davis's Sermon on this subject.—ED.

GOETHE'S FAUST.

IV.

WE have remarked that the first great weakness in Faust's character is his all absorbing thirst for selfish enjoyment—enjoyment of a lofty god-like quality, it is true, but yet sought from the pure desire of gratifying self. The most intense selfishness sometimes impels us to make what appear to others, and even to ourselves, sublime self-sacrifices, and the selfishness that sacrifices worldly things for spiritual happiness, may be the most respectable kind of selfishness, but is no less selfishness if the sacrifices are made on the ground of an expectation of a personal gain more than equivalent to the loss. Some who imagine themselves more pious than their neighbours might profitably meditate on this.

The next thing we remark in Faust is that, having spent his all in quest of a knowledge that should bring him happiness, he is compelled to see that he has completely failed. And as his failure seems to himself totally undeserved, a brooding spirit of discontent takes possession of him. In this mood he determines to leave a world that cannot satisfy him, and dive for his ideal bliss into the unknown. We have seen how he was arrested in the very act of putting the poison to his lips, by a memory of early life and an " aftershine of Christianity." Thus a fresh opportunity is offered him of beginning life anew. The Gospel of Christ is brought before him in the most impressive manner ; it has, as it were by accident, saved his life, and, could he now learn its grand lesson of self-renunciation, it might also save him spiritually. We find that he does indeed re-open his new Testament, and begin to study it with new zest ; but, as we have remarked, he is in that most critical state when all dogma has been melted in the crucible of a mystic philosophy, and is thus peculiarly liable to be caught in a moment of weakness by the enemy, who is ever on the watch to work him woe. We shall now see how the temptation comes upon him.

The steps of the process are most skilfully developed by the poet. Faust has just been saved from suicide by the Easter chorus, and immediately thereafter we find him mingling in the happy throng of simple townsfolk in their holiday merry-making. To this scene we have already referred for the purpose of showing the estimation in which Faust was held by the people. Its importance for us now is that here the devil makes his first outward approaches to him. Up to this time his aberration from the path of wisdom had been, perhaps, more a mistake of his judgment than conscious wrong-doing, and that mistake having been laid bare, he has come under two influences that in themselves are powerful for good, and which the devil must distort to an evil end if he would not lose his hold on Faust. The first of these influences is the natural wish to mingle again among his brother-men. The healthful gratification of this wish might have saved him from his self-torturing discontent and morbid introspection, and from that unnatural longing which he has, to forsake the society of men and mate with spirits But at the very first step that Faust takes towards a healthier life, Mephistopheles intrudes upon the scene. To those who have not read Faust, and are moreover unacquainted with the demonology of the middle ages, it may seem strange that Goethe should introduce Mephistopheles to Faust, and to his readers, under the disguise of a black poodle, The poet must

pay thus much deference to the old legend which is the groundwork of the drama ; but the devil soon adopts a form under which he is more familiar to us of the nineteenth century, and appears as a cynical man of the world and lover of pleasure. Amid the holiday throngs, however, he does not appear in his true character, but as a harmless poodle. Faust does, indeed, mistrust him at first, and fancies that, as he frisks round him, he is encircling him with tracks of fire. But these diseased fancies are cast away, and the poodle is allowed to accompany him home and make his domicile in his private study. The question arises, what does Goethe mean by this ? And Goethe is not addicted to explaining his own parables, or pointing the moral of his tales. But if we consider the peculiar state of Faust's mind at the time, and the form in which the temptation afterwards becomes manifest, we shall scarcely be guilty of temerity, if we hazard the guess that the apparently harmless poodle represents the impulses aroused within him by sights long unfamiliar to his eye, impulses, rendered unusually morbid by long suppression, to seek the happiness he has failed to find elsewhere, in sensual gratification. The first stirring of such impulses naturally alarms the ascetic philosopher. The poodle seems to encircle him with tracks of fire ; but he soon reasons himself into the belief that they are but the cravings of purely natural appetites, that the poodle is but a poodle after all. If that be the meaning of the poodle scene, the explanation appears simple and rational, and we can all understand too easily how the devil gets his first lodging in the privacy of Faust.

The following scene in the study is, in some respects, one of the most pregnant of meaning in the poem, as it is one of the most critical in the history. From the scenes of social joy he returns, as he supposes, to holy meditation and devout study ; and though the poodle, the new companion of his solitude, causes him some interruption, and is not so easily kept quiet as a well-behaved poodle should be, still it is but a poodle, and may learn, by-and-bye, to conduct itself better. Very beautiful and pious are the thoughts that rise in Faust's mind—

> Hushed now the field and meadow lies
> Beneath the veil of deepest night,
> And solemn thoughts within us rise,
> Too holy for the garish light.
> Calm now the blood that wildly ran,
> Asleep the hand of lawless strife ;
> Now wakes to life the love of man,
> The love of God now wakes to life.

After a little interruption from the poodle he again proceeds—

> When in our narrow cell confined,
> The friendly lamp begins to burn,
> Then clearer sees the thoughtful mind,
> With searching looks that inward turn.
> Bright Hope again within us gleams,
> And reason's voice again is strong ;
> We thirst for life's untroubled streams,
> For the pure fount of life we long.

A most unseasonable snarling on the poodle's part, here takes place, and Faust's mental serenity is a good deal disturbed when he resumes the broken thread of his meditations. If we have rightly explained the nature of the poodle, this effect of his interruptions may be easily understood. The tone of discontent returns, and he begins again to give expression to the old unsatisfied longings. But he turns for satisfaction to a new source, and seeks for inspiration in the Holy Testament. And now we have a repetition, in new forms befitting the sixteenth century, of the drama enacted in Paradise—the Tragedy of the Fall of Man. The first act has been played in hell and the plot laid : the second in heaven where the devil has appeared to claim Faust as his own, and now the drama is transferred to earth and made visible to us. The world's oldest mystery or Miracle Play, whose Symbolism may be thoughtlessly ridiculed, but whose meaning is of perennial and paramount interest to man, is once more put on the stage with new scenery and dresses, and translated into a modern dialect by the greatest genius of modern times. Faust, a man such as we have described him, seated at night among his books and chemical apparatus, is the subject of a temptation substantially similar to that of the ancient representative of our race ; and to a somewhat similar temptation, however it may differ in form, is every man, who has ever lived at all in a spiritual sense, subjected. In the case of Faust, the Tree of Life is represented by the book before him on the table, with its revelation of Him who is the life of the world. Hard by is the Tree of Knowledge—yea, so strangely contiguous are the two in human life, that, as both were found growing together in Paradise, so Faust finds both in the pages of his Testament. He turns to one of the most deeply mysterious passages in the sacred volume. "In the beginning was the Word." How he attempts to explain the Logos, and solve the mysteries of creation it would be beyond our purpose to set forth. Granting that a philosophical explanation is possible, Faust's interpretation is at least as well worthy of study as any other we have heard of. But what we have to observe is that he at the very outset refuses to accept the Christ of the Gospel as the Word of Life, and strives to soar on the wing of pure Reason up to the secret source of creative power. Nothing will satisfy this man but a perfect understanding of the Incomprehensible. He will not believe and obey God till he can first understand Him. He turns his back upon the Tree of Life, and gazes eagerly upon the Tree of forbidden Knowledge. How closely the craving for forbidden knowledge—the desire to be "as gods"—is connected with the craving for forbidden pleasures, and how easily the craving for prohibited pleasures of the loftiest kind, degenerates into a prurient desire for the merest sensual gratifications, are shadowed forth in this crisis in the history of Faust, but the shadowy indications must be looked for with earnest eyes in the book itself. Our aim is not to explain "Faust," but to incite our readers to read and deeply ponder it.

By the time that Faust has exhausted his intellectual power on the Logos, he becomes conscious of increased restlessness on the part of the poodle. The precise amount of unsuspected influence that the poodle's presence may, up to this point, have been exerting on his study, it would be difficult to guess. We are often profoundly ignorant how far our conduct in the greatest crises is influenced by the presence of an unsuspected devil. We all carry our temper about with us, as Faust was accompanied by his poodle, but, as long as possible, he disguises himself in an innocent shape, and matters have become desperate when he stands forth before us as the enemy of good. The crisis has come to Faust, and he sees that the poodle is a poodle no longer. Here again the poet must defer to orthodox demonology, and the change of appearance is not accomplished without a variety of transformations, and the employment of suitable incantations and objurgations on the part of Faust. These we must pass over, and content ourselves with stating that, at last, Mephistopheles stands forth, much to Faust's astonishment no doubt, drest like an itinerant schoolman. The form in which the tempter now appears is one of the most familiar to Faust, and in no other guise would he be likelier to succeed in ingratiating himself with his intended victim. Perhaps nothing further than this is signified by the poet, although it is probable that, in presenting Mephistopheles in this garb, he has in his mind the fact that our gravest dangers and temptations usually meet us in no startling or extraordinary manner, but, clad in the garb of familiar friends, insinuate themselves into our ordinary occupations and pursuits. But the explanation most consistent with the entire meaning of the drama is that the itinerant schoolman is really Faust himself. Faust, like every man, carries his devil in his own bosom. The weakest of us could cope with the foes without, but the strongest of us is often led astray by the enemy within. On this principle we have explained the poodle, and now we have but to suppose that after puzzling his intellect over the Logos to no purpose, his understanding baffled and his faith failing, he gives himself up to decided unbelief and denial, and in his restlessness and misery emerges from his long seclusion and wanders up and down the land, as a travelling schoolman or pedagogue. This profession was notoriously common in the middle ages and the old legends afford reason to suppose that Dr. Faust adopted it for a time. A recluse like Faust, suddenly embracing a vagabond mode of life, would meet with temptations enough. Our explanation is borne out by the fact that the devil in the shape of the itinerant schoolmaster calls himself the Spirit of Negation. It was the Spirit of Negation that drove him to this career, and suggested to him the impious

THE WEEK.

AFTER the unsatisfactory result of the Baroda experiment, few intimations could have been more astonishing than that of the appointment of another mixed Commission to decide the disputed succession to the Ulwur Raj, and we are glad to see a contradiction given to the rumour. The dispute has arisen on this wise : The late Maharajah Sheodan Sing died without leaving a direct lineal descendant, and the two rival claimants were Mungul Sing, the Maharajah elect of the Political Officers on the spot, who is quite a boy, and Lakdhir Sing, the uncle of the late Mahrajah, who is a man well-stricken in years. The Supreme Government give a provisional sanction to the election of Mungul Sing, but Lakdhir Sing protested, and not having obtained a favourable hearing in India, is said to have sent an agent to the Home Office. The Pioneer declares that the appointment of the Commission is a myth, and states that, about a month ago, certain Thakoors went to Simla to complain of the election of Mungul Sing, whom they had refused to acknowledge, and were sent home with a warning that they would risk the confiscation of their estates by delaying to give in their submission. And there, as far as is known, the matter rests.

ANOTHER report which is certainly without foundation has been circulated,to the effect that the King of Burmah had refused to receive Colonel Duncan the new Resident at Mandalay. The latest reliable intelligence is that he arrived there just as the steamer was leaving for Rangoon and had merely announced his arrival to the King. He had neither seen the King nor asked for an interview.

WE have this week to record no intelligence from abroad, that can excite the most keenly alarmist among us. The clouds on the eastern horizon are swept away, and we trust our diplomatists, will so arrange matters with China and Burmah that the extension of commerce and the safety of British subjects may be secured in these countries. As we stated last week, however, we hear of no guarantee received from the Chinese Government, for the fulfilment of their promises. A telegram from London informs us that Kao Sung Tao, officiating Governor of Canton, and Hong Chien Jhen, son of the President of the Board of Works, have been appointed conjointly Chinese ministers to England. Russia has a party of explorers, it is said at work in south western China, her main object in this, as in her other Asiatic undertakings, is doubtless to extend her commerce, and the explorers are seeking a direct caravan route between Russian territory and south western China. The Russians are certainly the most active pioneers of civlization in the old world at the present day. The Chinese, with their horror of foreigners may well be uneasy, with Russia presistently seeking to open up their country to commerce from the north east, and the French and British from the south and west. The land of the Celestials has a prospect of being pretly well terrestrialized by foreign traders ere long.

RUSSIAN relations with the Ameer of Kashgar are of a somewhat uncertain character. The semi official press charge the Ameer with fomenting insurrection in Khokand, and doubtless this matter would form subject for conversation with the envoy from Kashgar who was recently received at St. Petersburg.

THE Khan of Khiva seems to be committing himself in a more, decided manner, having, according to Reuter invaded Russian territory with an army numbering abont 9000 men, and laid seige to the forts of Emba. There can be no doubt that Russia must extend her Asiatic borders if she would preserve those she has already gained, while speaking of Russia, it may be interesting to note that an Imperial Commission lately sent to the Crimea, has pronounced in favour of transforming the famous stronghold of that peninsula into a trading port, and proposed Balaklava as the site of a naval fortress to supersede Sebastopol.

LAST week, we noticed the report that the young Nizam of Hyderabad had refused to meet the Prince of Wales, and the explanation that followed, to the effect that the Nizam's advisers were far from being unwilling that he should wait upon the Prince, but that the boy was of too tender years and delicate constitution for the journey to Calcutta. In the face of the testimony of Major Clarke, of the medical attendants on the Nizam, and of the Hyderabad officials, that the child is unequal to the fatigue and excitement of the journey and the durbar, it was most unwise to ask it. It is now reported that on account of the Nizam's inability to meet the Prince either at Bombay or Calcutta, the Prince's visit to Hyderabad is not to take place Sir Salar Jung points out that this will occasion severe disappointment, as great preparations are being made for the Prince's reception. The following Native Chiefs have been invited to meet the Prince in Calcutta :— The Maharaja of Kashmeer, Maharaja Sindhia, Maharaja Holkar, the Maharaja of Travancore, the Maharaja of Jeypore, the Maharaja of Jodhpore, the Maharaja of Patiala, the Maharaja of Rewa, the Rao of Kach, the Begam of Bhopal, the Nawab of Rampore, and the Raja of Jhind.

AN influential meeting of native gentlemen was held on Saturday, last at the hall of the British India Association in this city at which it was unanimously resolved to give a public entertainment to the Prince as a mark of the loyalty of his Bengalee subjects ; to request the Viceroy to give the proposed entertainment a place in the programme of arrangements, and to honor the occasion, by his presence ; also to invite subscriptions for the entertainment from the native community, a minimum of Rs. 50 being agreed upon, it being at the same time understood that this rule should not preclude the invitation of guests. It was also resolved to invite the leading native gentlemen in the mofussil to co-operate in the loyal demonstration, and a powerful committee was appointed to make arrangements. Among the other native Princes who have been invited to meet the Prince at Bombay is the Maharajah of Dhurumpore, who is said never yet to have been out of his teritories. The Dhurumpore rulers are styled *Shuryia-wunshi*, "descended from the sun," and are of very high caste. The Viceroy will leave Simla for Kumaon on the 15th of October, and arrive in Bombay on the 8th November to meet the Prince He will then proceed to Indore and Central India, and is expected to reach Calcutta on the 8th of December. The Secretariat Offices at Simla will close after the Viceroy's departure, and will reopen in Calcutta on the 8th of November. The programme of the Prince's tour in Bombay and Madras has been sent to England for approval. The programme for Calcutta and the North-West will be settled on his arrival at Bombay. Sir Richard Meade will conduct the young Gaekwar of Baroda to Bombay, and will then be relieved of responsibility in connection with Baroda, and will proceed to Mysore to be ready to do the honours to the Prince there. The Maharajahs of Travancore and Cochin have been specially invited by the Governor of Madras to meet the Prince there on the 6th of December. Madras has been a little more dilatory than the other capitals in making preparations and raising subscriptions.

WHEN our last week's summary was written the reports from the Turkish insurrectionary provinces seemed to indicate the speedy collapse of the rebellion and the triuimph of the Sublime Porte. These indications were at least premature, and according to the latest intelligence, sanguinary strife is still raging in Bosnia, and more Turkish troops were being despached to the Servian frontier. Prince Milan of Servia at the opening of his Parliament made earnest allusion to the troubles on his frontier, and expressed the hope, that the Sultan with the countenance of the Imperial Powers, would find means both to pacify and satisfy the discontented populations. We suspect the former will be difficult enough, and we fear the latter is more than hopeless. A more recent telegram states that Servia has ordered the mobilization of all her frontier brigade, the reason assigned being the threatened concentration of Turkish troops on her borders. The foriegn Counsuls were travelling about among the Herzegovinian insurgents and were expected shortly to reassemble at Stolatz to communicate the result ot their mission to Server Pacha.

IT is affirmed that the late disaster in the Naga Hills will not deter the Government from prosecuting its exploration policy, and that an expedition for the next cold season is on the *tapis*.

THE Barada correspondent of a contemporary states that last month, the ex-Gaekwar sent to Baroda for ten young girls—not married and having no children and handsome. Ten beautiful girls, says the correspondent, voluntarily came forward willing to proceed to Madras, where they were accordingly sent, with some old clothing of the ex-Gaekwar. We may presume that Mulhar Rao has given up his project, which perhaps was never a serious one, of petitioning the Home Government, and is therefore taking means to lighten the woes of confinement as much as possible. His residence in Madras will probably be a Garden Reach on a smaller scale, and it is a pity that an island home in the Bay of Bengal could not have been given to him.

MADRAS papers report a serious out break of cattle-disease of a peculiar type in Wynaad. The native call it " Dod-roga," a term which is supposed to mean " big epidemic." It appears to fasten upon the fattest and healthiest cattle in the herd, and an animal that seems in perfect health over night may be found dead in the morning On one state at Kalpathi 123 buffaloes are said to have died in less than two months. The Government stated that they had no veterinary surgeon to depute to investigate the disease, but recommended the Board of Revenue to try to secure the services of Mr. Western.

MONEY MARKET.

FRIDAY, 17TH SEPTEMBER.

The decidedly firmer tone which appeared last week, and which was not unexpected, has given way this week on publication of the Bank's Statement, in which a very strong falling off in the public demand for money is exhibited. For months past the high state of the Government balances has attracted a good deal of attention, and their proportion to the Bank's cash balances has been too large to allow of its being taken for anything like certain that an easy money market could be counted upon for long. Once or twice lately, there have been signs of the Government being about to utilize their heavy balances, but it is only this week that their reduction has become really important. The withdrawals on the occasion have amounted to nearly 60 lakhs, and it is tolerably certain that further withdrawals of the same kind are still going on. But fortunately for the prospect of continued ease in money, the public demand on the Bank has suddenly assumed narrower proportions :—for many months past, the large arrivals of Council Bills have scarcely affected the heavy demands of the public on its financing mainstay, but this week the whole of the Government demand has been met by an equal easing off in the public demand, so that the Bank remains as strong in cash as it was before, and much stronger as regards the probability of demand on its cash. It is perhaps premature to assume that this improved position will last, as there is first the holiday demand to meet, and afterwards the cold weather demand for trade; but both demands have been an element in the calculation all along, and now there are the increased deposits to come and go upon :—the great point to remark is that the augmentations to trading means have hitherto mostly passed away into trading channels as they arrived, but now they are at last either accumulating in the deposits, or going in reduction of previous borrowings.

Shipments of Silver to India have almost ceased for the present, but from the tone of exchange they may be expected to recommence by and bye. The Bank of England return of yesterday points to rather dearer money, the bullion having declined to 28 millions.

Notwithstanding the very favourable season which the country at large has enjoyed, the demand for cotton goods is not improving: last week it was better, but latterly great flatness has again set in. This is very unaccountable, and consequently very disappointing, but sooner or later, it can scarcely be doubted the restrictions imposed by late heavy failures at home, on the wild exportation of cotton fabrics to all foreign markets must pave the way for a legitimate business here, such as used to exist in the good old times or legitimate trading. So far however, the trade can be described as only looking a little better, and great caution will be required if trade is to be brought round at all promptly.

The export trade continues to look rather lively. Jute is in good demand, but business is somewhat checked by deficiency in ready freight. First marks bales have been taken to a very good extent at Rs. 19, and the market is well supported by the wants of the local mills for Jute in the loose. Wednesday's Tea Sales passed off wonderfully well, considering home accounts: fine sorts were on the whole rather dearer, and even the medium and inferior qualities can scarcely be called cheaper. The home reports of continued decline for the latter must however be received *cum grano salis* as if all the declines of 1d. and 1½d. per lb, which have been reported this year, were added together, we must believe that Teas are now selling for something less than nothing.

Sterling Exchange has kept quite steady all the week. At on time there were signs of weakness, but those speedily evaporated and yesterday's easier appearance in money, instead of checking the rate, rather strengthened it, for the choicest six months Bank Bills have to-day been freely available at *1s.* 10 1/16*d.* the closing rate for Tuesday's Mail having been only *1s.* 10-1-16*d.* to *1s.* 10 1/16*d.* A strong demand for telegraphic transfers to be availed of up to and including the Poojahs, has been met steadily by the Banks at *1s* 9 3/16*d* the highest rate that has been current for a long time, and which is the rate, as nearly as possible, which Council Bills have brought at the last three biddings, including last Wednesday's. This certainly shows strength in the rate, when viewed in connection with the Bank's last account. For last Mail, a good many credits were in the market, and the general rate was *1s* 10 3/16*d.* to private buyers, and *1s* 10 1/16*d.* to Banks, but for this mail they have scarcely yet made their appearance. Document Bills have been uniformly steady at *1s* 10 3/16*d.* but they too are now in rather short supply at market. The large forward sales a short time ago quite explain this state of affairs although exports of produce are in the increase.

To-day's prices are as under.

Bank Billls	*1s.* 10 1/16*d.*	6 months sight
Credit Bills	*1s.* 10 3-16*d.* to ¼	
Document Bills	*1s.* 10 3/16*d.*	

There has been a large business done for to-days China mail, the closing rate being 21-8½ for private paper.

Government Securities have on the whole been rather heavy : at one time looking weak, but latterly steadier. The great bulk of business has been in the standard Four per cent stock, which declined a day or two ago to 101-14, but has since recovered to 102. The four and a half stock has been little dealt in, whilst the five and a half has been more largely taken than usual, and its price has been steadily maintained at 108-4, anything lower being quite exceptional, and of trifling amount. Rates stand firm as under :

4 per cents,	102
4½ per cents,	103
5½ per cents,	108¼

The Share market can scarcely be called better, at least not more active, though perhaps the steadiness of present rates has been confirmed by ineffectual attempts to buy at lower prices. This is speaking of the market all round, but in some cases a slight giving way has been seen.

Bank Shares are dull, but not so dull as they were at beginning of the week. Spinning Mill shares are perhaps better on the whole, but there are exceptions. Tea stocks remain almost depressed, but sellers at a reduction are not easily found. There is nothing in the miscellaneous list calling for more special remark than the quotations suggest. The week's business has again been very small, and the following comprise the principal sales :—

Bank of Bengal 1,417½, 20, 17½ 20, 15, 17½, 1420.
National Bank 115, ½, 14, 114½.
Agra Bank 96.
India General Steam 417½, 22½, 25, 415.
Raneegunge Coal 94.
Barnagore Mills 97½, 98.
Howrah Mills 27, 26, 27, discount.
Seebpore Mills 78, 78½.
Bowreah Mills 95.
Goosery Mills 224.
Durrung Tea 73, ½. 4, 75.
Central Cachar Tea 150.
Kalacherra Tea 100, 110.
Majagram Tea 115.

SHIPPING.

ARRIVALS.

September 5th—Faize Robany, from Jeddah, Ville du Semple, from Bourbon. Winefred, from Newcastle N. S. W. 6th—Str. Arabia, from Straits. Str. Satara, from Rangoon. Houghton, from Jedda. Str. Socotra from Moul., Rangoon & Akyab. Ganges, from Natal & Madras. Marc Antoine, from Bourbon. 8th—Victoria Bridge, from Muscat. 9th—John Starr, from Madras. Str. Constance, from Coconada. 10th Str. Busheer, from Bombay, via, Coasts. Str. Duke of Buceleuch, from London via Suez Canal. Str. Madura, from Bombay via Coasts. 11th—Anna, from Bordeaux. Omer Pasha, from Gulf. Cretagne, from Galle via Madras Coast. 12th Str. Tibre, from Liverpool, Lucille, from Madras.

DEPARTURES.

August 22nd—Gentoo, for New York. 23rd Niphon, from Mauritius. 26th—Leopold et Marie, for Mauritius. 27th—Botanist, for West Indies. September 5th—Str. Chyebassa for London via S. Canal. Night Hawk for Mauritius. 7th—Str. Scotia for Port Blair and Camorta. Allum Ghire for Mauritius. 8th—Woodburn, for New York. Adventure for Mauritius. Glengarry for New York. Hugo for Falmouth. Str. Patna for Bombay via Coasts. 9th—Turkestan for New York. Loch Rannock for London. Lord Northbrook for Dundee. 10th—New Castle for Liverpool. Edward Percy, for Mauritius. Olivier Madeleine for Mauritus. 11th—Dragon for Mauritius. Str. Satara for Rangoon and Moulmein. Str. Penang for Straits and Hong-Kong. Renan for London.

LIST OF PASSENGERS.

ARIRVALS.

The P. and O. Co's S. S. *Mirzapore*, Captain A. Parish, left Bombay on Friday the 10th Inst. with the following passengers :—

FOR SOUTHAMPTON.—Mr. and Mrs. Fortey and infant, Mrs. Winter and two children, Mrs. Turner and three children, Mrs. Cayley and three children, Mrs. Crutchley, Conductor Hickey, Mrs. H. T. Dann, Mr. J. Blood, Lt. E. G. H. Bingham, Mr. D. S. Warlikar, Miss Robertson, Lady Bacon, Mr. and Mrs. Harley Bacon, Miss Baker, Master Baker, Capt. J. C. Babot, Mr. J. Milne, Mr. T. McDonald, Mr. A. Bishop, Mr. J. McIntyre, Mr. G. Campbell, Mrs. Swan, four children and native female servant, Capt. M. Young, Mr. J. Mills, and Mr. Howan.

FOR BRINDISI.—Col. Hasting Fraser, Mr. W. Cornell, Lt. A. H. Anderson, Mr. W. C. Capper, and Mr. C. Tweedie.

FOR VENICE.—Lt. Col. Lovett, Mrs. Hunter and infant, Mr. J. Monnett, and Mr. C. W. Vass.

FOR SUEZ.—Mr. H. B. Huchting, and Mr. Daunt.

DEPARTURES.

THE P. and O. Co.'s S.S. *Kashgar*, Commander E. J. Baker, arrived at Bombay on Tuesday last, with the following passengers :—

FROM SOUTHAMPTON.—Hon. R. West and native male servant and ayah, Major and Mrs. Guthrie, Mr. S. J. Savage, Mr. S. Watson, Mr. R. Twiss, Mr. S. Tiller, Mr. E. Andrews, Mr. D. McGregor, Mr. W. Colquhoun, Mr. T. Baxter Mr. J. Ashworth, Mr. A. W. Sharples, and Mrs. O'Callaghan.

FROM VENICE.—Mr. and Mrs. Conroy, Miss Conory, Mr. Behrend, and Capt. Langley, 43rd Light Infantry.

FROM BRINDISI.—Mr. H. H. Buckland, Sir Chales Sargent, Captain C. D. Swete, Mr. A. Brereton, Lieatenant-Colonel Rogers, Colonel Hughes, Mr. Blascheck, and and Mr. F. H. Souter.

FROM ADEN.—Magazine Sergeant Munro, George Williams, John Black Charles Wilson, and 10 native deck.

THE CALCUTTA STOCK AND SHARE LIST.

FRIDAY, 5 p. m., 17th SEPTEMBER 1875.

100 *Prizes.—Rs.* 5 *each.*

Due notice will be given of the Drawing, which will take place at Allahabad under the supervision of a Committee of Gentlemen of the Station.

Tickets can be obtained from all the Catholic Chaplains of the Vicariate, from Messrs, P. Sheridan, W. D. Hogan, T. Crowley, G. A. Savielle, and J. C. Purcell, Allahabad; A. John & Co., Agra; J. Retello, Simla; C. Carne, Umritsur; D. J. Byrne, Umballa: Manager, *Statesmans Press*, Calcutta and Bombay; P. S. D'Rozario & Co., Calcutta, E. urrie, 50 Bow Bazar, Calcutta; Rev. A. E. Medlycott, Howrah, and from the undersigned, who will be happy to furnish any further information required.

VERY REV. FR. LEWIS, *Rector, St. Joseph's Seminary,*
ALLAHABAD.

N. B.—A Free Ticket, for a separate Drawing, of 252 Prizes, will be presented to any one purchasing or disposing of 100 Tickets.

P.S.—The Drawing will probably take place on the 23th of Decem ber next.

East Indian Railway.

NOTICE.

Doorga Poojah Holidays.

THE Public are informed that, with a view to accommodate persons wishing to make short excursions by rail during the holidays. 1st and 2nd class monthly return tickets will be issued on any date from 20th September to 20th October next, at 1½ single fares for any distance not less than *fifty miles*

CECIL STEPHENSON,
Agent.

Calcutta, 3rd September, 1875,

Bengal Iron Works Company Limited.

THE First Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office, No. 38 Strand, on Tuesday September the 28th at noon to receive the Report of the Directors and pass the Audited accounts to June 30th 1875.

By order of the Directors
RUTHERFOORD & CO.
Agents and Secretaries.

THE Second Extraordinary General Meeting of Shareholders of the above Company will be held at the Registered Office, No. 38 Strand, on Tuesday September the 28th immediately after the first Ordinary General Meeting fixed for the same date for the purpose of confirming the Resolution, altering the fourth Clause of the Articles of Association passed at the First Extraordinary General Meeting of the September 9th.

By order of the Directors
RUTHERFOORD & CO.
Agents and Secretaries.

Calcutta, 13th September 1875.

thoughts and reckless exploits that followed. We may justify the giving of an objective form to temptations that really come from within, by the fact that Faust henceforth sins against his own better judgment. He is consciously divided against himself, and knows the evil character of the suggestions to which he nevertheless listens and yields. He does not, however, yield without remorse and many a struggle, on which account, such is the weakness of human nature, he contrives to preserve a little self-esteem and to despise the very devil that is leading him to destruction. The course of the poem henceforth is a ceaseless contest between Faust and the tempter; he struggles more and more with the fetters of *his wily enemy*, the more he feels that he is being dragged downwards to crime and ruin. Yet he cannot break the fatal companionship. While heaping abuse upon Mephistopheles, who grins and bears it, he confesses that he is "a fellow whom I cannot do without." How many of us have companions, without and within us—they may be good fellows, who are ever leading us into acts that we despise, or they may be private habits that we scorn while we cherish—regarding which we must make the same confession which Faust makes regarding Mephistopheles: he is a "fellow whom I cannot do without," although "he debases me before myself!" Those who will read and deeply ponder the story of Faust's temptation and sin will discover that, under different circumstances and outward forms, the poet has with extraordinary power and singular fidelity depicted many of their own most secret experiences. We know no one who displays a deeper knowledge of the human heart, than Goethe, and if we can but understand his manner there is no more skilful instructor. But he loves to speak in parables, and seldom pauses to be his own interpreter. "He that hath ears to hear let him hear" is the principle on which he writes. Those whose impatience makes them "run while they read," and who are contented with the first random meaning that they can gather on the surface, had better avoid "Faust" and every other work of Goethe. The deepest and, therefore, most universal truths of the human heart are often such as can only be parabolically shadowed forth, and the greatest of all spiritual teaching has been hidden in parable. It is useless to blame Goethe for not condescending to explain himself, and for leaving so much to the understanding of his readers, as long as the fact remains that spiritual truth can only be spiritually discerned.

It is remarkable that Faust, a man of lofty, aspiring nature hitherto, and whose after career constantly reveals brilliant gleams of noble instincts flashing forth in spite of the gross sensuality in which he lives, should when Mephistopheles first presents himself, as the devil confest, yield so readily and even joyfully to his offers. But, as we have endeavoured to show, the tempter had made much secret and unsuspected progress before he declared himself openly. The last weak remnant of faith that had hitherto been Faust's preservative, had been swept away, and had given place to flat denial, and all that Mephistopheles did was to crown denial and discontent with their natural fruit—bitter mockery. Under his tutorship, Faust is soon convinced of the inutility of spending life and health, and sacrificing earthly delights, in striving after supernatural knowledge and supermundane bliss, and as he had been in terrible earnest before, the rebound of his vehement nature is now equally terrible. It manifests itself by an unnatural calm. He is not in the least appalled by the appearance of Mephistopheles; he, who recently wished to wrestle with God, can now coolly break a jest with the devil. He does not start away with horror, but listens with sceptical curiosity to the fiend's introduction of himself!

> I am the Spirit of Negation;
> And justly so: for all that is produced
> Deserves to nothingness to be reduced.
> 'Twere better, thus, that there were no production.
> You see, then, that my province is destruction,
> And all that men call wickedness and sin,
> The native element I live within.

It is indeed with considerable unwillingness that Faust allows the tempter to bring their first interview to a close. He has first to be put to sleep by a sweet spirit-lullaby and awakens to find himself alone. In the next scene Mephistopheles presents himself in a new guise. He proposes to introduce his victim to the pleasures of sense and of society. He ridicules the moping, studious, life of Faust and his aspirations after the food of gods. That part of the temptation is past, and he now urges him forth to the world to revel in sensual delights. He presents himself as a gallant cavalier; and, in his own words—

> All sprucely clad in gala dress,
> A scarlet coat with golden lace,
> A short silk mantle and a bonnet
> With a gay cock's feather on it.
> And at my side a long sharp sword.
> Now listen to a well-meant word;
> Do thou the like and follow me,
> All unembarrassed thus and free,
> The busy scene of life to see.

How Faust meets this proposal, and what follows thereupon, may perhaps be briefly narrated in a future issue.

IN THE FASHION.

[BY DIOGENES.]

THE lady who avowed that she would rather be dead than out of the fashion, was no uncommon specimen of her sex, though how it comes about that fashion has only a significance for white women in India, and none whatever for the dark skinned sisterhood, is an enigma for any old cynical bachelor to solve who is inclined to such riddles. It is, in truth, a curious matter this feminine ardour for dress, which appears to afford the wearer so little real profit. The box from England full of finery, is well calculated no doubt, to excite the imagination in the ordering thereof per list, in the receipt of the invoice, and in the weary delays of canal steamers; but let the box at length be safely opened in the Indian verandah, and the jealous tin disclose its hidden treasures, and for the man at least there is an end of the fun. For the woman however, it is all beginning. The delicious hats and bonnets over which beetles, flies, and other insects crawl in the likeness of life, are each a poem to that fair person we suppose to be stooping over the box, and there is an *epigram d'agneau*, as the cooks say, in every silken *robe* curiously befrilled and beflounced which is imported into India—in bitter mockery of the customs—by the name of *wearing* apparel. For such frills and flounces, beetles in tinfoil, creeping things on paper flowers, and wonderful fashioned sleeveless jackets in maroon velvet, women have been known to scorn poor love and marry money. Though intrinsically the value of such things is small, it is only the hall-mark of fashion which renders them expensive. It is a pretty thing to see a pretty woman's eyes dilate over the gorgeous gewgaws of a milliner's box from home, but it is a spectacle on which the anxious husband or father must expend much money; in fact an opera box would cost him less. The female apparel of the day about which the Customs cut their jokes, is warranted if for anything, *not* to wear and it would indeed defeat its object of adornment of the female form divine, if it lasted longer than the ever changing fashions To-day, we have the happy owner of the box from Europe, striving to emulate by artificial means the peculiar proportions of the Hottentot Venus; a month or perhaps a week hence, she will be tossing her *paniers* contemptuously aside, and endeavouring, as well as nature will permit, to imitate the fore and aft dead level of an American clipper ship. There must be variety and plenty of it to please the ladies, and it may be accepted as the general rule of female dress at this moment, that the more costly and useless the fashion, the higher it is held in the estimation of the sex which, adorns it.

It would be difficult to discover the advantages which women imagine a fashionable exterior in an Indian station is to confer upon them. To hear them talk, sometimes, it might be supposed that we had no occupation, or amusement, or religion, but to estimate and wonder at the female fashions, carefully digesting the same in cutcherry or council. Men however don't take this view of it. They incline to the notion that fashionable dress, and plenty of it, gives no other return to the wearer than a dubious kind of admiration from one sex, and a peculiar kind of malevolence from the other. Thus there are husbands who think it unprofitable that for a great expenditure of precious cash, they should reap nothing but the flirtations of their wives and the evil speaking of their female friends. It is vain to tell these too commonsensical Benedicts that lovely woman arrays herself in splendour only to please—her husband first, and all creation afterwards. They refuse credit to this amiability of the sex, and turn indignantly to results sometimes disheartening. For instance, there is Mrs. Foley and Captain Tournoure of the Horse Chuprassies, both Anglo-Indians of the highest fashion. The common taste in fashionable dress

beween this pair betokens much amiability no doubt, but not of the sort that husbands love to dwell upon. It is a common taste for dress that creates this sympathy, Mrs. Foley explains; nevertheless Mr. Foley thinks that sympathy more expensive than it is worth. Or he remonstrates about the coolness of the *Burra Bebee* of the place, even in the midst of the steaming rains. How is it Milady Beebee assumes a frigid politeness with Mrs. Foley, where all was Indian warmth and hospitality before? Is it that Mrs. Foley's robe is superior to that of her influential friend, or has the newest thing in bonnets divided their affections, while the station *Padre* was preaching his homily over their heads? Loss in friends and reputation is not unseldom the price paid for leading the station fashion; yet many women are prepared for this or any other sacrifice in worship of the goddess they adore, while for the sake of being the best dressed woman in any society, there are some who would sacrifice their husbands and children on the very horns of the altar.

It is a popular mistake for all this, to say that men do not appreciate dress in women, as some angry fathers will declare. The female form is so beautiful in itself, that whatever a pretty woman wears will become her after a fashion, and thus as the masculine eye grows accustomed to such contrarieties, as crinolines or no crinolines, it is content to take a woman in whatever she happens to wear, as at her best. But men with very few exceptions have no special fondness for the fashion of the hour. The mere empty robe or bonnet does not gratify their eyes as it gratifies woman's loving gaze. They frequently see something positively hideous in the dress or hat, that a woman is in love with, but when the woman gets into either, they follow her example and are enamoured after their kind. The male loafers of drawing-rooms and boudoirs affect to understand female dress, in order to recommend themselves to its wearers; but our own secret belief is that no man ever did, or ever will, comprehend what is only comprehensible to the other sex. All that men know on the subject is that the fashions of artistic charlatans like Woerth are absurdly grotesque, and contrary to the very rudiments of true art. Beyond this, they can only recognise the broad and general fact that our women are æsthetically silly not to enhance their charms with costumes better suited to the easy grace of the figures bestowed upon them by Dame Nature. An artist would infinitely prefer the costume of a well-to-do modest Hindoo girl, to all the costly efforts of Woerth after the extravagant and grotesque. Yet we are told that this simple fashion of the Hindoo, is nearly as old as the East itself, and has undergone no essential change or alteration, while European ladies were trying everything from nakedness to furs, and back again. How many English fathers, husbands, and lovers would bless the day that introduced such an everlasting fashion to English society? What purses—economised out of frippery—a man might lay by for his children, and what rest the bread winner's weary, laboring brain might enjoy, if the never changing Eastern dress was the costume *de riguer* of our wives and daughters from this time forth for evermore. And yet—curious freak of philanthropy—it is our female fashions, as well as our female customs, that Miss Carpenter and her sisterhood would introduce to the unsophisticated maidens of the Orient!

The moral or immoral dread that some women have of being five minutes behind fashion's time-piece is very absurd and surprising. They imagine for themselves, frightful social penalties accruing for this unpunctuality. Their lively imagination paints a sneer or a smile on the lips of every other woman, and they tremble in their ridiculous high-heeled boots for the consequences. But if asked what these terrible consequences are, it is most likely they could not describe them. Something frightful and indefinite—like fashion herself—is all we shall get in explanation from a woman who would take to her bed and die, rather than wear the fashions of last year. Alack! that those despised trades, the tailors and the milliners, should exercise such fatal power over men and women. "Conscience," saith the poet, "doth make cowards of us all;" it would be truer to say—dress. For moral cowardice commend us to persons "in the fashion." They dare not do this or that, for fear of risking their fashionable reputation. The enthusiasts of the order would cut their friends or parents, desert their children, and sacrifice their honor, rather than affront an idol that is their all; but what is it at its best but vanity, the idlest of vanities, and that which others care the least about? The social penalties of being out of the fashion which some people so greatly dread, are in truth a bugbear that fade as we grow older and wiser, until at last, and in the days when the grasshopper comes to be a burden, we forget that there ever was such an idol as fashion among those we bowed the knee to in hot youth.

LETTERS TO THE EDITOR.

DISESTABLISHMENT: DEFENSOR FIDEI.

To the Editor of the Friend of India.

SIR,—Dr. Arnold was of opinion that the correlative of taxation was not representation but protection. And long may our Empress protect true religion (does not this include good morality?) is the earnest prayer of an old fashioned

SUBJECT.

II

To the Editor of the Friend of India.

SIR,—It grieves me to see so much room taken up again and again in your paper, with the opinions of more or fewer about the action of the authorities in paying religious ministers. God has sent the English to India and made our Queen its Empress. If she be graciously pleased to apportion one or two per cent. of her revenues for public purposes to the highest and most sacred purpose of which I can think, she only sets us a good example to follow. Truly too many change the sky they live under, not their "minds," who come to this side the Red Sea. But, Sir, in pity to the majority of your readers who wish not to see the foundations on which our forefathers built the administration of India overturned, may I ask you to check the correspondence to which this letter alludes.

OLD INDIAN.

III

To the Editor of the Friend of India.

SIR,—I am much surprised to see that no advocate of disestablishment in India has come forward to answer the letter of 'Mofussilite' in your issue of the 24th July. I presume the reason is that they are conscious that he has not left them a leg to stand on. Mr. Ross's arguments were solely applicable to Christian countries. I do not wish to enter on controversy on points which have absolutely no connection with India, so long as it is heathen; but lest it should be imagined that Mr. Ross is as unanswerable in his sphere of argument as 'Mofussilite' in his, I would submit that a society of Christians can only govern itself on Christian principles, so that their religion *is* a natural part of their government; secondly, that men do not differ as to the principles of Christianity, but as to its accidents.

I feel that the present condition of the so-called National Church of England is an outrage on common sense and justice, but I am opposed to disestablishment, because by it we should lose our last chance of having a really national organisation for the promotion of the objects of Christianity.

DOKIMASTES.

DEPRECIATION OF THE RUPEE.

To the Editor of the Friend of India.

SIR,—In the *Friend of India* of 28th August 1875 the following sentence occurs:—

"The debasement is in the rupee itself, and the question is, does "it not cling to it whether we keep it here or send it abroad."

I think it must. Let us suppose a case.

Say that we were back to the good old times when a rupee sold in India for 2*s*. The export merchant then had to sell his bills on London at the rate of 10 rupees for £1, and upon that exchange he settled the price he could afford to give for produce. Now, let us further suppose that in one week, the price of silver were to fall fifty per cent., or one half, and that as a consequence exchange followed and fell to 1*s*. per rupee. The merchant could then sell his bills at the rate of 20 rupees for £1, and be in a position to give double the price for produce and still have the same profit. If he had been buying rice at Rs. 2 per maund he could now give Rs. 4 per maund. The laws of competition would soon compel him to do so, for if he did not another would. The producer or seller of rice being now able to exact Rs. 4 from the exporter would not sell his rice to the home *consumer* for less. This law would apply to every article which an exporter wanted.

Now for imports. If a tin of bacon could be imported and sold for Rs. 2 when exchange was Rs. 2, it could not, or would not, be imported and sold for less than Rs. 4 when exchange was Re. 1. This rule would apply with equal force to all our imports.

With the price of all exports and imports doubled, the labourer and mechanic would pay double for rice, clothes, &c., and would strike for double wages. Labour would rise, and the *produce of labour* would rise in price. Government would pay more for labour and services of all sorts, more for imports, more for exports, expenditure would increase enormously, and revenue would have to be raised in proportion. Living would rise, then house-rents and the rent of land; it would be more expensive to rear cattle, and meat would rise; even fish would rise in price, as boatmen would find their expenses heavier, and so on. The rupee in fact would very soon be only worth half its previous value.

One way, and perhaps the only feasible way, of meeting this depreciation is to accept the position and adjust incomes, &c., to suit. The rupee has always been over-rated: it never did sell for 2*s*. in London as silver. I think it never went above 1*s*. 1½*d*. From fortuitous circumstances in exchange and trade it has sold for 2*s*. in India sometimes, but these chances are not likely to recur. So let us rate the rupee at something like a fair value.

M. N.

NOTE.—M. N. describes truthfully the *tendency* of things: but a fall in the exchange value of the rupee of ten per cent, would not influence the up-country bazars so quickly as he supposes.—ED., *F. of I.*

BABOO KESHUB CHUNDER SEN.

To the Editor of the Friend of India.

SIR,—In your last issue you prominently quoted a statement from the *Lucknow Witness*, criticising the personal habits of Baboo Keshub Chunder Sen. If the criticism had not been based upon the relation which that gentleman bears to the religious movement of which he is the head, perhaps it might have been passed over in silence. But since it is attempted, however covertly, to discredit the whole character of the Brahmo Somaj, by unfairly representing the character of its leader, perhaps you will make room for a few words on the subject.

The principal charge against the Brahmo leader, is his alleged habit of self-indulgence. Every religious reformer, according to the Lucknow paper, "should feed upon bulbs, dress in a strip of bark, and live under a tree without any other company or property than a manuscript or two." But Keshub wears fine clothes, displays gold on his person, travels first class in the railway, and in a word "pays extreme attention to his personal get up." Such circumstantial criticism argues an intimate knowledge of the person criticised. But let us see if this is the case. It cannot be denied that Keshub provides himself with a decent covering when he is at public places. These clothes are always plain. At evening parties, and in the presence of the highest personages, here as well as in England, his simple black *choga* always attracted notice. But clad "in a strip of bark" he could not very well find access to the ladies and gentlemen whom the requirements of his position oblige him to see. In the pulpit, and in private life, he is dressed in coarse inexpensive garments, which sometimes sadden the hearts of his friends and family to behold. As to railway travelling, I have myself travelled with him times without number in a common third class carriage, and never saw him, within my remembrance, except on one occasion, and that was while on his return home from Europe, travelling first class. He used to wear a watch and chain, a present from his friends in England, which he long since disposed of in furtherance of the cause he serves. He does not "feed on bulbs," it is true, but he eats the simplest vegetarian food, which he cooks with his own hands regularly every day. He does not "live under a tree" but he delights to spend the greater part of the day in a little, *khola* hut, as homely and poor as any in the town, which he has paved cleaned, and furnished by his own manual labor. He never took a pice from the public as remuneration for his life-long labors, but has on the contrary made over his whole property to the care of the Brahmo Somaj, out of which his brother-missionaries support him and his family. So far for Keshub's personal adornment and love of ease. If Keshub Chunder Sen clad himself "in a strip of bark," "fed on bulbs" and "sat under a banian tree" on the Grand Trunk Road, however much the circumstance might relieve the minds of Methodist missionaries, by removing a formidable opponent out of the field of rational life, it would not carry the same amount of relief to men of common sense. But as the case *now* stands, he lives according to his standard of missionary life. And it is to be hoped that the Methodist missionaries will have the faith and firmness to live according to theirs, as set forth in the columns of the *Lucknow Witness*.

The other charge brought against the Brahmo leader, is that his views are "broad." This means that his religion is catholic and all embracing. Here is an offence to those men—happily their number is growing less every day—who cannot bear the existence of wide sympathies, and an unsectarian creed. But I fear my friend cannot help his "broad views," any more than his critics can help that their views possess the contrary virtue. Nor are the public anxious that he should borrow from them their distinguishing peculiarity. It is owing to this breadth of view, I believe, that he obtained the fraternal sympathy of all Christian sects in England, the Methodists included, and that he commands the regard of enlightened men of all creeds in India at the present day. But this is not all. The Methodist journal has it that "it is most saddening to find every tipsy, licentious, wordly-minded Bengali Baboo call heart of the himself a Brahmo Somaj." Whether it saddens or gladdens the writer to make this remark, we do not know. But of one thing we are certain. The Brahmo Somaj has invariably tried to remove the evils of drunkenness and licentiousness from Hindoo society with a relentless zeal and perseverence which has secured for it the better and endless execration of caused its name to be cursed by every drunken and licentious Bengalee. If there is one cause which has more than another contributed towards the unpopularity of the Somaj among certain classes of the rising generation, it is the furious crusade which it has carried on against the popular vices of the day. This fact, I am persuaded, is known to the *Lucknow Witness* as much as to others; and in the face of it to declare that every immoral Bengalee is a Brahmo is as unveracious, ungenerous, and unjust as the statement that the entire number of Brahmos in Calcutta is not more than ninety men.

For a well-informed journal, like the *Lucknow Witness*, to put forth such unfounded allegations against an influential religious movement and its leader, apparently without any enquiry and personal knowledge, would be bad enough under any circumstance. But against Brahmo missionaries and their leader, who have always preached and practised principles of rigid asceticism at the risk of their influence and popularity, the charges are simply inexplicable. Unfortunately mis-statement and exaggeration have always been effective instruments in the hands of unscrupulous partizanship. But I must say I expected a better and more course of conduct from the devoted Methodists of Lucknow and their organ.

Faithfully yours,

FAIR PLAY.

NOTE.—We are most glad to have been the occasion of eliciting this letter. The *Lucknow Witness* will of course reproduce it.—ED., *F. of I.*

THE MINISTER OF PUBLIC WORKS.

To the Editor of the Friend of India.

SIR,—As the "Centenary" of the publication of the "Wealth of Nations" is coming round, the following extract from that work, containing the opinions of Adam Smith in reference to this country, may be interesting, particularly as they shew a marvellous appreciation of its wants, a hundred years ago, by a man who never set foot in India :—

"In China, besides in Hindoostan and in several other Governments of Asia, the revenue of the sovereign arises almost "altogether from a land-tax or land-rent which rises or falls "with the rise or fall of the annual produce of the land. The "great interest of the sovereign therefore in his revenue, is in such "countries necessarily and immediately connected with the culti- "vation of the land, with the greatness of its produce, *and with "the value of its produce.* *But* in order to render that produce both "as great and as valuable as possible, it is necessary to procure to it "as extensive a market as possible, and consequently to establish the "finest, the easiest, *and the least expensive* communication between "all the different parts of the country, which can be done only by "means of the best vessels and the best navigable canals." In Adam Smith's day, very little was known about irrigation to secure the products of the land, on the value of which he lays so much stress, and he evidently considered rent as a tax, an error from which we are not yet free in India I suspect, but he clearly understood that "the value of all freely produced commodities depends, in "advanced societies as well as in those that are rudest and poorest, "*on the quantities of labor* required to produce *and bring them to "market.*"

Now, as rent forms no part of the cost or value of production, and as it is well known that even in the wealthiest countries the agricultural laborer is the poorest paid class of the community, and there is the least variation in their rate of wage or hire, it follows that the only way to secure the greatest value to the products of the land in such a country as India, is to give it the cheapest means of communications to the best markets of the world. Any two villages in India, possessing equally fertile soil, and the same means of cultivation, will pay the same for labor; but if one is 100 miles nearer to the best market than the other, the value of their products will depend *entirely on the cost of carriage*; for it is impossible in the same market for different prices to prevail at the same time for the same products. In this instances by ordinary bandy, the cost of carriage would certainly not be lesthan Rs. 12, by railway probably Rs. 6, and by canal pro, ably Re. 1. Under these circumstances, the village *nearest* the market could afford to pay Rs. 5 more rent if it had a railway, and Rs. 11 if it possessed a canal, than the one situated 2 miles further off, and both would obtain the same profit in the market. Has any such principle been adopted in any of our numerous revenue settlements? Or have we gone on taxing the land merely according to soil on the old native system, in utter disregard of the elements which constitute the value of its products? It is to be feared there is not a district yet in India which has been provided with the means Adam Smith so clearly explained, a hundred years ago, as absolutely necessary to secure and to enhance its prosperity. In the meantime, with peace and security under British rule, the population is increasing at the rate which always prevails amongst so ignorant and improvident a race, and yearly reducing its wage-fund; so much so that each year of failure of the rains becomes a year of famine in a country where stock accumulates slowly at all times, and may even be diminishing owing to the great increase of numbers. Let those then who advocate railways for such a condition of society shew the economical principles on which their system is based; that it will secure the food supply, at all events, of the whole of the population, at all times and at the most reasonable cost; and that there is therefore no need to afford the people of the country the water necessary to secure its products from being ruined by drought and cost of carriage. No greater responsibility can by any possibility attach to any man than attaches to those who now are directing the administration of public works in India. The question is not *Railways* vs. *Canals*, or one system *versus* another, but the point to be decided is the providing the absolute necessaries of life in the most abundant and cheapest manner, *before* the population has reached such a point that all the resources of the State will be unable to meet the emergency and prevent their dying of starvation.—Yours, &c.,

A. B.

THOUGHTS ON REVELATION.

To the Editor of the Friend of India.

SIR,—Will you kindly allow me to say a few words in connection with the letter of your correspondent "E. P. N.," and your remarks thereon, published in the last issue of the *Friend*?

You have reduced the difficulties of your correspondent to these three, *viz.*—(1) the plainly human character of much that he finds in the Bible; (2) the unsatisfactory character of the evidence on which he is required to believe in the *miracles*; and (3) the doctrine of the Church concerning the destiny of the unbeliever.

With reference to the first of these difficulties you say "the Bible is just as truly human as it is divine." This is no doubt perfectly correct. But at the same time it does not appear to be quite clear to you where the divine nature of the Bible begins, and its human ends. Now, if you refer to Revelation, Chap. 14, v. 13, I think you will find this point made clear. St John writes: "And I heard a voice from heaven saying unto me, write, &c." That is God spoke and man wrote. In this consists the complex nature of the Bible. The voice, the message, the truths contained therein, came

from God, but the writing is man's. Everything that is written in the Book for our reproof, correction, and instruction in righteousness, and to make us wise unto salvation, was spoken by God. Sometimes He spoke audibly, at others to the heart of the writer, but the voice was always His. Similarly, the writing was always by man; and as man's work contains human imperfections. Thus then the divine nature of the Bible consists in the *voice* being God's, while its human nature consists in the writing being man's. That the voice is God's, that the message is truly divine, the best, the most convincing proof that one may have, is that it commends itself to his heart and conscience. If the message does not commend itself to the heart, no amount of reasoning or of external evidence will convince him of its divine origin, while if it does commend itself, all further evidence is unnecessary, except perhaps to strengthen his faith. Your correspondent appears to have busied himself too much about "the *evidences* in support of the inspiration of the Bible," while his first duty was to see whether or not the voice contained in the Book commended itself to his conscience.

As regards his second difficulty, you advise your correspondent to "cease troubling himself about the miracles altogether, if possible." I do not know whether by this you mean to tell him to cease troubling himself only about the particular miracles recorded in the Bible, or about the whole question of the miraculous or supernatural. If you advise him to do only the former, he may no doubt be able to do it. But in dealing with Christianity, neither he nor anybody else, can possibly cease to trouble himself about the question of the miraculous or supernatural. For it should be remembered that "Christianity in its real essence is not a definite quantity of moral truths or teachings, [as many seem to think] but a series of *facts*. It is Christ himself, his person and work, the religion of the incarnation of God in Christ, and the redemption of the world therefrom resulting. In other words, Christianity is essentially miraculous: *its Founder*, in His personality as the God-man, is the *miracle of all miracles*, the miraculous goal towards which all foregoing miracles were tending, and of which all that follow are only an echo. Our Saviour's earthly life and work, from His sinless birth to His resurrection and ascension—all the chief facts of redemption—are nothing but miracles, and his entire teaching, as well as the law and the prophecies of the Old Testament, must be taken as the declaration of divine truths—as a supernatural revelation, or in other words as a miracle." * In short, the beginning of Christianity is a miracle, "its author is a miracle, its progress depends upon miracles, and they will hereafter be its consummation. If the *principle* of miracles be set aside, then all the heights of Christianity will be levelled with one stroke, and naught will remain but a heap of ruins. If we banish the supernatural from the Bible, there is nothing left us but the covers" It would be well therefore to think twice before we advise any one to cease troubling himself about miracles.

With regard to the third difficulty of your correspondent you say, "as to the doctrine of eternal misery, we do not find it in the Bible," and you promise to say something more in a future issue of your paper. If in writing on this subject again you kindly take the trouble to explain, however briefly you may please, the meaning of the following passages of Scripture—*viz.*, Isa. 66,24, Dan. 12,2, Matt. 18,8, 25,41,46, Mark 3,29; 9,45, Luke 3,17 and 2 Thess. 1,9—you will confer a great favour upon

B. L. C.

9th September 1875.

NOTE.—Our correspondent surely does not suppose that the passages he refers us to have been overlooked by us. In the rest of his letter we substantially agree.—[ED., *F. I.*]

POETRY.

THE WALLAH'S DREAM.

I had a dream, an empty dream,
  I dreamt I was a Judge,
I thought I was not what I seem,
  A dull cutcherry drudge.

No petty "chungi" cares were mine,
  No treasury I held;
No simple sentences of fine,
  My lofty soul compelled.

But in a cushioned chair I sat,
  An ermined gown I wore,
And knew what I was driving at
  (I never knew before).

A bowing bar had met my view,
  A crowded court was there;
On either side of me there grew,
  Another cushioned chair.

In these soon came to take their seats
  Men gowned like any wench,
They greeted me as one who greets
  A brother on the Bench.

A cause was called, and Counsel rose,
  With brief in hand, to plead,
Just then a fly perched on my nose,
  And caused my nose to bleed.

I turned upon that insect vile
  Thinking the same to kill,
But waking, found the "court" the while
  A "stunt's" cutcherry still.

A native pleader slowly droned
  About a "mar-pit" case,
And I had dosed while he intoned,
  My hands before my face.

INDIAN NIGHT FANCIES.

An old half-naked mendicant trudged on his way,
  The distant city-gates were not yet seen;
And in the west went down the light of day,
  While high above shone out the night's pale queen.
He asked of none the road his feet should take,
  Nor said a word of greeting, as he passed
The labourer homeward-bound, who longed to make
  A sign of homage to the man of caste.
For on his shoulder hung the sacred thread,
  That him who wore it God-like priest proclaimed.
Although he had not where to lay his head,
  His name was reverenced wherever named.

He held the secrets of the holy book,
  Was twice-born and a mystery-knowing man;
The sin-stained one would cringe beneath his look,
  As to a priest with power to bless or ban.
What brings him to the city at this hour,
  The home of vice and misery and sin;
Where lives no thought of God in cot or tower,
  But all is vanity and greed within?
The weary monarch, tired with festive joys,
  And thinking of the morrow's pleasures only,
Reclines among his harem's latest toys,
  And feels, with all his wealth and courtiers, lonely.

The hut where lives a flickering dying life,
  The slave that feels no hope, that knows no joy,
Hard by the palace walls, where greed is rife
  And low intrigues each passing hour employ.
What with them all has he, the man of God,
  Whose home is in the cavern of a hill,
Whose passions have been purged out with the rod,
  And whose great soul great problems only fill?
Comes he to warn the city and its lord,
  To make a mystic writing on the wall,
To scare the royal jugglers, or bring word
  Of some calamity that will befal?

His feet have reached the gates, he passes through,
  The throng divide to give the priest his way,
And mothers take their little ones to woo
  A blessing from his lips, if he will stay.
But onward, heeding none, he presses still,
  And reaches last the massive palace gate;
Tells the *durwan* to learn the monarch's will,
  How long he for an audience must wait.
Soon hurried through the long and lofty halls,
  He stands before the monarch face to face,
Who smiling to a fawning courtier, calls
  To give the Brahmin honorable place.

"What news?" the King with eager look demands,
  "What brings me, sire, the honor of your visit,
"Has he of Simla sent by you commands,
  "If so, speak out nor leave us here to quiz it."
Thus joking, spake the King: then he replied
  "I bring your Majesty no news of peace,
"'Tis known at Simla that you lately tried
  "To gain from Phayre too quickly your release.
"'Tis known that in the cup he daily drank
  "Your myrmydons a poison mixed to kill,
"Nor is it thought your Highness even shrank
  "From telling them the fatal cup to fill."

The words were hardly spoken, than without
  Was heard a cry, and startled was the King,
To see a bold intruding "Europe" lout
  His hated presence in the chamber bring:
"My duty is your Highness to arrest,"
  These were the words the wretched monarch heard.
"I bow," he said, "to the great Lord's behest,
"That I do so, my friend, go take him word."
  "Not if I know it," was the blunt reply,
"Nor will I budge, your Highness, from your side.
"You'll hear, I do not doubt it, by and bye
  "What fate is yours, but *not* till you are tried."

I was alone in tents, save for the dark visaged ones,
  Who to all orders gave attention brief:
My day of work was done, and that of India's sons,
  Weary with toil, courting in sleep relief.
Above me was the brightest starry vision placed
  In a cloudless sky.
Around me was the far expanding waste,
  Where vegetation flickered witheringly to die:
The "oosur" plains made such by work of man,
  Who knowing better than his Maker what he needs,
Worked out a scheme, and placed a ban
  Upon the peasants' toil wasted in raising weeds.

* Christlieb's *Modern Doubt and Christian Belief*, page 286.

The night-call of the watchman falls on my listening ear,
And jackals' cry that rises like a child's,
Howling in pain, and true it was not clear
If hunger could find food in all these barren wilds.
What brought *me* here? To see a starving land,
And starving myriads sending up their cry
To hard-bound heavens, that heeded not the hand
Upraised in prayer, "Send rain or we must die."
To see in all its grim reality, the scourge
Of famine, and disease, and death that ended all:
To see the unburied dead, that fire had failed to purge,
So fleshless that the jackals half neglect to maul.

To see, and seeing strive to save, who but for this
Would dying swell the number of the slain.
Say, who cries now in cynic-tone, "'Twas done amiss?"
Who measures *lives* by worth of money-gain?
Who but the hard, unmanly, sordid, soulless one,
That grinds his life out to extract a pain,
Hoping 'twill prove a pleasure, and at last when won
Ere he can grasp it, life has set to wane.
Gold and the lust of gold, that bright and cankerous metal,
That urges to bloody deeds and mercy slays;
That by *one* token all things learn to settle
Nor asks if good, but only if it pays.

H. A. L.

INDIAN INTELLIGENCE.

BENGAL.

THE date of the departure of the overland mail from Calcutta will be altered from Tuesday to Friday on the 1st of October, the last mail to be despatched on a Tuesday being on the 21st instant.

A REMARKABLE impetus has been given to the jute trade in Dacca. There are now ten European and Armenian firms who deal largely in this article of produce. Three steam presses have already been set up, and two others are in the course of erection.

THE movement which aims at curtailing the extravagant customs of native marriages appears to be making way in Behar. The other day a deputation of natives waited on Mr. Metcalfe with a request that he would use his personal influence for the promotion of the good cause. For *paterfamilias* in this country the prospect of becoming a father-in-law must be as dreadful, in many cases, as bankruptcy.

Is it intended to suffocate His Royal Highness? Not a day passes that some officer or other is not spoken of as being about to be attached to the staff of the Prince of Wales, not to mention appointments actually made. Having been placed in the hands of the head of the Thuggee Department, the poor Prince is further, if report may be accepted, to be handed over to the Director of Customs, Bengal. Really, with his own staff, an Indian Major-General, assisted by the hero of Coomassie, and other minor luminaries, H.R.H. will do pretty well, and we mistake him very much if some of these gentlemen are not sent to the right about. The intention of the local Government may be a right and wise one—hearing all we do—but the Prince will naturally neither appreciate nor permit this exceeding care.

THE following are the vessels of the detached squadron, which will act as an escort to H.R.H. the Prince of Wales:—

"H.M.S. *Narcissus*, 28 guns, 3,548 tons, 400 H.P., Rear-Admiral R. Lambert, C.B., Captain Lord Charles Scott.

H.M.S. *Doris*, 24 guns, 3,005 tons, 800 H.P., Capt. the Hon'ble E. Freemantle, C.B.

H.M.S. *Immortalité*, 28 guns, 3,984 tons, 600 H.P., Captain Hume.

H.M.S. *Newcastle*, 31 guns, 4,020 tons, 600 H.P., Captain R. G. Douglas.

H.M.S. *Raleigh*, 22 guns, 5,200 tons, 800 H.P., Captain G. Tryon, C.B.

H.M.S. *Topaze*, 28 guns, 3,915 tons, 600 H.P., Captain Thurpp.

All classed as steam frigates."

THE Sonthalis seem likely to the quiet, after all, according to the *Pioneer*. Like some ryots in Eastern Bengal, they quarrelled with the zemindars on the rent question, and even wished to cut that matter short by refusing to pay any rents whatever. It does not seem clear, however, that oppression provoked their outbreak. A recent minute by the Lieutenant-Governor now confirms an idea we have already noticed—that the Sonthals were bent on establishing a new religio-political organization of their own. It appears that they even made some attempts in that direction; but the cave-locked Sonthali Barbarossa, who was to have re-appeared for the liberation of the race, declined to come out, and so the farce collapsed. The religious movement, however, is progressing, and the Sonthalis are becoming respectable Hindoos. The measures recently adopted for the pacification of Sonthalia are, the establishment of an additional police force in the district, the movement of troops to Doomka, and the land settlement authorized by a Regulation of 1872. The Act provides for the landlord a more punctual payment of rents, and for the ryot reasonably low rents for fixed periods.

JUGDING from the appearance on parade, last season, of the gallant Calcutta Volunteer Lancers, we do not think the proposed re-organization of that fine body of Cavalry—*vide* advertisement in another column—can be said to be either premature or altogether unnecessary. A muster of about a baker's dozen, all told, including four or five officers, is not imposing; and the presence on parade of unbroken chargers, dubious riders, and erratic lances, hardly heightens the moral effect of the martial display. It is to be hoped that, at the meeting to be held on Monday morning, common sense will preside, and that the lance will be once and for all discarded. With men and horses trained to perfection, the lance is a noble weapon; but in the hands of tyros it is less effective than a broom-stick, and moreover very much more dangerous to friends than foes. It may, when properly handled, tell admirably in pursuit, on an enemy's rear, but it becomes unpleasant when indiscriminately applied as a stimulus to the movements of friends charging in front. The sword is a much handier weapon for cavaliers who cannot spare the time to learn the lance exercise properly. Even if you use it clumsily, it can only—as a rule—chop off a bit of yourself or of your horse; whereas the lance, being far-reaching, may spread havoc all arouud you. If there be any difficulty about the uniform, we feel sure that the cost of making the change would be almost covered, during the ensuing festive season, by the sale of the lancers' gorgeous array for fancy ball and theatrical purposes. The lances themselves could be used as trophies on the occasion of the general illumination and decoration of palatial streets of our great city.

THE introduction of English Opera to Calcutta may be considered as an era in its musical annals, and that the event was looked forward to with considerable eagerness was evidenced by the large and brilliant audience which assembled on Wednesday evening within the walls of the Corinthian. The theatre itself has been completely remodelled and re-decorated during the interval of the recess, and the appearance of the house has been greatly improved. The sweep of the dress circle has been altered in shape to that of the horse-shoe, well-known as the best form, while the proscenium has been brought forward some feet, giving additional depth to the stage. By this alteration the stage boxes of last season have been eliminated, and though a little space is thus lost, the general appearance of the house gains greatly by the change. The decorations are in excellent taste; white and gold, relieved by cool greys and pale shades of blue, predominating. Altogether, we think, the appearance of the house reflects great credit on the energy and pluck of the Corinthian Company, and although the heat last night was very great, it was not unbearable, as the excellent arrangements now made for ventilation considerably ameliorated the condition of the audience. Very punctually, for Calcutta people, the audience assembled, and before nine the house was full, with the recollection of the humours of the opening night last season before us we were prepared to expect some lively passages between the usurpers of reserved seats and their legitimate owners, but to our disappointment not one occurred within the range of our observation. We say to our disappointment, for, with nothing to fill up the weary half hour between arriving and the ascent of the curtain, a little squabble of the kind is rather amusing than otherwise. However, nothing of the sort happened, and at the near approach of nine we settled ourselves to listen to the overture and await the lifting of the act drop. *A propos* of this latter it is but the barest justice to Herr Freyberger to make special mention of this the latest, but by no means the least excellent, production of his facile brush. The subject is taken from a well-known picture, of the *genré* order called "A water party," and has been vigorously reproduced with a breadth of effect and a brillancy of colour which makes the drop scene one of the most remarkable features in the house. Shortly after nine the curtain rose upon the opening chorus sung by the strength of the company. The Opera of *Satanella* is among Balfe's most successful productions, and is one of the best illustrations we have of the ability and style of that composer. The principal part, from which the opera derives its name, was sustained by Miss Alice May, whose first appearance before a Calcutta audience, was a success at least equal to that obtained by any of the Prima Donnas who have visited the City of Palaces. The music of this *rôle* is throughout of a trying character, and in certain parts particularly so, but it offered no difficulties which Miss May did not surmount with ease, and her performance from beginning to end afforded the most unqualified pleasure to the listener. This lady's voice evidences a very high degree of culture, and her management of it may be considered perfect, while an additional charm is lent to her performance by the life-like and finished acting—perfect in very gesture, and glance and smile—which illustrates the whole. This was particularly evidenced in the recitative preceding the song in the first act, "Myself once more" and the song which followed, "There's a power whose sway," popularly known as "The power of love," was well nigh irreproachable in its execution, and the remarkable purity of tone with which it was rendered. In fact this song established Miss May as a favorite with her audience as the applause is received amply demonstrated, and from this point her appearances were looked for with anxiety. Her greatest triumph, however, was yet to come in the slave market scene, when her *sostenato* singing in the song, "Wouldst thou win me" was most excellent, and brought down the house with a unanimously demanded *encore*. The sustained shake at the conclusion was remarkable for its purity and correctness. Her more florid singing *agelita* in the cavatina, "Lost one accept thy doom" in the second act was most exemplary. We congratulate Miss May upon a legitimate artistic success, which the audience warmly attested by well-merited applause at the termination of each act. We regret that the effect of some of the solos was partially marred by the accompaniment, and we may be allowed to hint that the clarionet part would have been considerably more pleasing had it been played *piano*.

NORTHERN INDIA.

THE number of houses destroyed by the late floods at Umritsur was 2,800, valued at a lakh and a half of rupees.

THIRTY-SIX deaths from cholera in Lucknow were reported last week. Seventy-four men died from fever during the same week.

THE young Thakoor of Limree, a pupil of the Rajkumar College, intends to go up for the next Entrance examination at the Bombay University.

WITH regard to the late heavy rains at Dehli, the Agra paper says: "The Jumma and Kalee Musjids and all the unrented houses of the wealthy people are filled with the poor, who have become houseless. All trade and business is stopped, and the public offices closed. It was still very cloudy, but the rain had decreased."

SEVERAL cases of embezzlement by ministerial officers having come to light during the last few months, the Government of Bengal, at the suggestion of the Commissioner of Orissa, contemplates to receive security from all ministerial officers who have anything to do with money matters.

A LETTER from Moradabad in the Agra paper says: "A Court of Enquiry, with General Payn as President, has been sitting here on one of the officers of Rattray's Sikhs. The officer was summoned from Cashmere, whither he had gone on leave, to answer certain charges brought against him by the officer commanding the regiment."

THE Government *Gazette* publishes the appointment of His Highness Maharaja Ishwaripersad Narayan Singh, of Benares, as an Additional Member of the Viceroy's Council. The *Gazette* also publishes a notification that all goods imported into India by, or for the use of H.R.H. the Prince of Wales, or any Member of his suite, will be exempt from all Customs duties.

THE Inspector-General of Police, N-W.P., warns the force under his command that their services will be largely required during the approaching visit of the Prince of Wales, and that, therefore, they should see that their coats and unmentionables are mended and dyed—also, we may be allowed to suggest, that their faces are washed and hair combed.

THERE have been heavy rains along the Punjab Railway; the diversion at Beas was carried away, and trains have been delayed. Twenty-three inches of rain fell at Delhi in 24 hours on Tuesday and Wednesday morning. Thousands of houses have been destroyed. Upwards of 40 persons were killed. The crop and weather report of the 11th instant for North-Western Provinces was generally favourable.

WE are glad to hear that there has been a decided improvement in the health of the troops at Umballa. The companies of the Rifle Brigade out in cholera camps have only had one fatal case of cholera within the last seventeen days. Should this satisfactory state continue, we fancy the Rifles will shortly return to their barracks in Umballa prior to leaving for the Camp of Exercise at Delhi.

THE *Lucknow Times* tells us that the costs of settlement in Oudh have amounted to Rs. 55,07,737. The difference of cost in some of the districts is remarkable. In Fyzabad the costs have come to upwards of seven lakhs of rupees, while in Pertabgurh they have been four lakhs and twenty thousand only. Much of the difference is, of course, to be ascribed to the various conditions of different districts, and something, also, to a diversity of practice in the adjustment of charges.

THE High Court, Allahabad, has issued a circular to Sessions Judges and Magistrates, in the North-West Provinces, directing that, on receiving an application from a duly qualified practitioner acting on behalf of an accused person, the Magistrates and Sessions Judges in those provinces shall permit the record of any criminal trial or proceeding to be inspected at such time, and in such room, of the court as the Sessions Judges and Magistrates of districts shall, by general or special order, appoint for this purpose.

FROM the returns submitted to the Government of India of the outbreak of cholera in Simla, we see that 340 cases were reported, of which 183 proved fatal. The fatal cases consisted of 168 native and 15 Europeans. These returns, however, show the total unreliability of Indian statistics, for even in a small town like Simla, and with the attention of an extra number of officers specially directed to the disease, the Deputy Commissioner tells us that "the returns do not represent a complete list of cholera-seizures and deaths in Simla."

WE understand that one officer and gentleman, connected with the recent unseemly and riotous behaviour at the Simla Club, is likely to lose his appointment, and that others will also suffer. Are we wrong in thinking that some connection exists between this class of misconduct and a condition of excitement caused by the presence of cholera epidemic? Without pleading extenuation on any such untenable ground, it will suffice to say that we have never seen an outbreak of cholera unaccompanied by excesses of one sort or another.

THE station and neighbourhood of Kussowlie were visited by a tremendous storm on the night of the 10th. The wind was furious, and most of the houses lost their roofs. Simla, we are told, is suffering from a second deluge. Although the heaviest fall of any one day, which was 4·21 inches on the 4th August, was exceeded by that of one day in 1873, a fall of 5·98 inches having been registered on the 23rd of July of that year, the fall of 1875 has already exceeded that of any entire year of the last five: 84·4 inches having been registered up to Saturday last, the nearest approach to this being 83·76 for the whole of 1871.

A MAHOMEDAN, writing under the signature of R. G. Melvill, addresses a contemporary as follows: "I find that a report is in circulation, and generally believed, that I am in receipt of a pension. Kindly allow me to contradict this report, as it places me in a false position to be supposed well off, when in reality I am living from hand to mouth and occasionally without the means of purchasing the necessaries of life." People who are anxious to do homage to virtue which, for conscience sake, cheerfully endures poverty and persecution, will doubtless feel inclined to raise a subscription in behalf of a martyr who sacrificed a wife and a pension for the true faith and a *khansamah's* daughter.

THROUGH communication by train was restored, on Saturday last, over the S. P. and D. Railway. The usual speed of trains has had to be reduced over the late break of 27 miles between Umritsur and Beas, and it now takes two hours longer than it previously did to reach Jullundur and other stations down country. This, we understand, is only a temporary arrangement, necessary to consolidate the new diversions and embankments, and we learn that by about the 15th instant a new time table will be issued, reducing the extra time from two hours to about thirty minutes, until the line can be permanently re-opened over the new bridges and culverts which experience has shown are necessary to be reconstructed. These new works are heavy, and cannot, we understand, be completed much before the end of the year.

A CORRESPONDENT writes as follows to the *Delhi Gazette*: It is well known that the Russians moved a column of troops from Chaadjui (on the Oxus) early in August, and hoped to reach Merv in fifteen days. By the end of that month, it was supposed, Merv would be in possession of the Russians, and Merv being only 150 miles north of Herat, the Ameer Sher Ali would at once have moved his head-quarters from Kabul, and have made Herat the capital (as, of course, it should be) of Afghanistan. Yet we hear nothing from Kabul further than that the Indian Government (fools that they are) pay the Ameer his 1,50,000 rupees monthly, and send him thousands of arms—*cui bono?*—the last batch of which were intercepted by the Khaibaris, who appropriated the said arms for their own use against the Amir, who now asks the Indian Government for more!

AFTER all the *Pioneer's* crumbs are not always supplied in a very liberal way. We, who do not profess to enjoy the confidence of the Foreign Office, have been enabled to give our readers full particulars regarding the Nizam; but it is evident, from the following vague, and mysterious allusion to the subject, that our contemporary is not equally fortunate. "We have ascertained that the Nizam of Haidarabad has not refused to meet the Prince of Wales in any contumacious sense. So far as the small boy himself is concerned, he would probably decide very differently. But his guardian, Sir Salar Jung, hesitates to expose the delicate lad to the risks and fatigues of a journey to Bombay or Calcutta. This, at any rate, is the reason assigned; whether the true one or not we do not pretend to determine. We have an impression, however, that the Nizam will be found in his place on the occasion, and we are certain that should he fail, none but the most convincing pleas will be accepted as an excuse for his absence."

A CORRESPONDENT writes from Allahabad to the *Delhi Gazette*: An appeal was heard before Mr. Oldfield on Tuesday last, from a petty Rajah in the Jhansie Division who has been convicted by the Sessions Court of having murdered his own wife. A model of the house in which they lived has been sent up as part of the case. The Rajah and his wife, a girl of about twelve or thirteen years, slept in an upper-storey of the house—one in a room and the other in the verandah of this room. During the night a cry was heard, and shortly afterwards the Rajah was seen by his mother running down the flight of steps. The other members of the family and the servants also woke, and ran up to see the cause of the cry. They saw the girl lying dead with her throat cut. The Rajah, it is said, stood still when accosted by his mother, and did not appear to be chasing anybody (as he afterwards said he was), nor did he go up with the others to see his wife. These and other circumstances, in the opinion of the Sessions Court, point to the Rajah as the murderer. The appeal was heard on Tuesday, and judgment was reserved.

ON the recommendation of the local Government, the Government of India have sanctioned a scheme authorizing the Conservator of Forests to select every year five young men of good families—if possible, sons or relatives of men serving in the Forest Department—to be trained at the Roorkee College for employment in the department. Government will advance Rs. 10 a month, for their maintenance while they are studying, and this advance the young men are expected to refund when they get employment. Our informant has omitted to say whether the scheme applies to natives or Europeans and Eurasians, but judging from the smallness of the maintenance allowance we think it applies to natives only. If such is really the case, we fail to see why a similar arrangement should not be made to prepare European and Eurasian young men for one or other of the several departments under Government. The impression that Sir John Strachey ignores the claim of this class on Government, and is particularly partial to the natives, is gaining ground, but we trust it is without foundation, and we have no doubt that we will soon see practical proof to the contrary.

THE latest news from Siam is that the rainy season has set in fully and during this time the Siamese priesthood confine themselves to the temples. The young men who enter the priesthood are, during the rainy weather, taught how they should prosecute their duties. Candidates for the priesthood only remain in the temples for three months. Taking advantage of the opportunity afforded them, a large number of noblemen have obtained the King's permission to enter the priesthood. In connection with this subject, it may be stated, that His Majesty has granted plots of land for the erection of temples. Many noblemen have been promoted in the King's service for the ability with which they discharged the duties devolving upon them. Mr. Fowle, Consul for H.M. at Rangoon, has been rewarded with the decoration of the Siamese crown, and many other private gentlemen have received orders in recognition

of their services. The Church Establishment question appears to have attracted some attention from the European residents of Bangkok. On the 18th July last, a meeting was held at the English consulate, and measures taken to establish a library for ladies. At the same time, the chairman was asked whether the British Government would provide for the salary of the clergymen to be appointed to minister to the spiritual wants of the English residents. The reply given was that such would not be the case. The English residents must provide their own clergy, and that the current expenses of the Church should be met by the members themselves. Thus the Church Establishment question would appear to be agitated in a small way in countries where a few adventurous Europeans have settled down for the purposes of trade. It has been argued that the British Government may help in the building or repairing of churches, but not in the support of clergymen.

AT the Meeting of the Viceregal Council at Simla on the 2nd instant, the Hon'ble Mr. Hobhouse obtained leave to introduce a Bill to amend the law relating to Merchant Seamen. He said that the English Acts contained provisions enabling the Governments of all British possesrions to send distressed British seamen home on board British ships—the expenses being provided for out of certain funds under the control of the Board of Trade. It had happened, however, in this country, that some masters of vessels had refused to receive seamen on the ground that they were not "distressed." These disputes had generally occurred just when a ship was about to set sail, and it was therefore proposed, in the first place, to provide a summary method of deciding them, and in the second, to impose a penalty payable in India on any master who, after the proper certificate had been given, still declined to receive a distressed seaman on board his vessel. Another point which had been disputed was the power of the local authorities to refuse sanction to the discharge of British seamen was a discretionary power, or a ministerial power which they could exercise only under certain circumstances. The Bill would make it clear that the power in question was purely discretionary, and would also impose a penalty on masters who discharged seamen without the requisite sanction.

One great temptation to the discharge of seamen here was found to be the facility with which lascars, who will work for less pay than Englishmen, can be obtained for the voyage home. A provision in the Bill, enabling the local Governments to prohibit the engagement of native seamen in the room of British seamen who had been discharged would, Mr. Hobhouse thought, strike at the root of the evil. Power is also to be given to the Port authorities to call upon masters either to receive back such of their seamen as, when the vessels, about to leave, may be suffering imprisonment for petty offences, or to deposit a sum of money sufficient to cover the expense of the men's maintenance while in India, and of their passage to England. This provision was thought necessary from the fact that masters had sometimes preferred trivial complaints against their men for the purpose of getting rid of them and engaging lascars instead.

BOMBAY.

NANA KHANVELKER has not paid the heavy fine inflicted on him, and consequently he is still in custody.

THE postage on letters from India to Zanzibar, forwarded *viâ* Bombay to Aden, and thence by the British India Steam Navigation Company's contract packet, will be reduced on the 1st of October next from 8 annas to 4 annas per half ounce.

WE regret to hear from Mhow that sickness is still prevalent in the station, but no fresh cases of cholera have occurred. The 65th Light Infantry are still in camp some three miles from the station.

THE Governor returns to Bombay on the 20th October. The religious affray at Poona last week was taken into Court. There was a good deal of excitement amongst the Hindoos at Poona. At the Bombay Chamber of Commerce Meeting, on Saturday, a protest was entered against the duty on long stapled cotton.

IT is reported by the *Bombay Gazette* that a Goanese Portuguese, of the name of Antone Camile DeSouza, has been appointed chief butler to His Majesty the King of Burmah on a salary of seven ounces of gold per mensem, and is said to be the eldest son of Captain Pedro DeSouza, an Aide-de-camp to His Excellency the Governor-General of Goa.

THE *Bombay Gazette* informs us, with reference to the missing steamer *Coromandel*, from Bombay, that Captain Mann, of the *Guy Mannering* (S.), which sailed from Bombay two days after the *Coromandel*, states that he had the same pilot out of Bombay, and was told by him that Captain Maby intended going as far as 22 degrees N. Captain Mann thinks the *Coromandel* has broken down and drifted north, and may not be heard of for some time.

ON Sunday last Mr. Anna Martand Josi, delivered a lecture in the Arya Samaj, of Bombay. He said that there were four castes or *varnas—viz.*, Sudra, Vayasha, Kshatria, and Brahmin—and that they originated from their respective professions. The Sudras were cultivators; the Vayashas, merchants; the Kshatrias, military men; and the Brahmins, priests. He also said that all persons composing these castes should eat with each other and intermarry with each other without the slightest objection. Mr. Atmaram Bapoo Dulvi endorsed what had been said, and added that the time was not far distant when he would be exceedingly glad to see these different castes broken up in spite of the animosity of the orthodox.

A CORRESPONDENT at Secundrabad writes to the *Times of India* as follows regarding the young Nizam's state of health: "The little Hoozoor, as his subjects call him, is, for his age (a little more than nine years), rather weak and small, as is often the case with children of an excitable disposition and quick intellect. He is an unusually intelligent-looking boy, with an interesting bright face, already showing signs of firmness in the sharp clean-cut lip, and of a keen eye. At the Residency, after a trying journey on an elephant, and what was almost a scramble up the steps, he had to retire to rest for some hours before his return home; but at durbars his little Highness sits on his *musnud* like a king, though this even is only for a short time in the early morning. But he is far from strong. The Minister believes—and this belief is supported both by the other guardian and by Captain Clark, the Nizam's tutor—that the excitement and fatigue of such an expedition would be excessively bad for his little ward, who is in anything but ruddy health."

WE are indebted to the courtesy of the Foreign Office for the following intelligence from Zanzibar: "Several large Arab caravans have reached the Zanzibar Coast from Unyanyembe with more than 2,000 frasilahs of ivory, but owing to prices having fallen to dollars 18 per frasilah for the best ivory, there is now no sale for it. Amir-bin Sultan who was sent by the Sultan of Zanzibar to the assistance of the Arabs at Unyanyembe against the rebel Chief Mirambo, has, after some misunderstanding with the Arab chiefs, returned with a small number of the soldiers that accompanied him, the greater portion having died from the sickness. At the least date all was quiet at Unyanyembe. Although Syud Barghash had recently announced his intention of giving no more help to the Arabs, and indeed of having nothing more to do with them, they were in hopes that he would reconsider his determination, and with this view had sent to Zanzibar to pray him not to carry out his intention. His authority at Unyanyembe is still acknowledged. Mirambo, who was supposed to have been dead, is still living, and caravans traverse his country without molestation or taxation. He has announced his intention of refraining from interference with the Arab chiefs, during the interval that may elapse before the arrival of the caravan he has sent down to the Sultan. A caravan of 1,500 slaves is reported to have reached Unyanyembe from the interior."

THE war between the Sultan of Sheir and the Sultan of Muccullah still continues. The former potentate recently purchased from Messrs. Rubattino and Co., at Genoa, a steamer of venerable age—twenty-three years, we understand—for the sum of Rs. 73,000, and, in order to avoid complications with the British Foreign Enlistment Act, he manned her with an Italian crew, and resolved to keep her well out of British waters in general, and of the port of Aden in particular. The steamer hoisted the Turkish flag, the Sultan of Sheir having declared himself a tributary of the Sultan of Roum, and great hopes were founded on the possession of a European steamer which, as a man-of-war, would be more than a match for the whole fleet of His Majesty of Muccullah. The Italian crew had stipulated for proper food and plenty of it, and, as chance willed it, fresh provisions became very scarce some three and four weeks ago. The Sultan did his best to supply the deficiency, and promised to do more. But the supplies fell off, and, of course, it was out of the question to put into Aden to replenish. The Italians became mutinous, and swore that the missing provisions they would have. It was thereupon decided to run for a Turkish port where supplies could be got without any risk of being caught in the net of a Foreign Enlistment Act of the new model. But misfortunes never come singly: it was found that there was not coal enough in the bunkers to enable the steamer to steam to the haven of refuge. The Italian crew thereupon mutinied outright, and took the unfortunate Sultan's man-of-war, bought at so great a price, right into the very lion's mouth—into Aden itself! There it was at once pounced upon by the British authorities, and there it will have to remain until peace is restored between the two Sultans.

MADRAS.

WE regret to hear that no rain has fallen in Mysore, and that scarcity of water consequently prevails there.

THE Madras Government has all native vessels coming from Ceylon put in quarantine so as to prevent the introduction of cholera.

THE Chamber of Commerce of Colombo has approved the proposals of its Committee, as to receiving the Prince, and has authorized an expenditure of Rs. 1,000 to provide that the address be presented in a suitable manner.

ACCORDING to the *Madras Mail*, the Prince of Wales will see two Governors in the Madras Presidency. He is to be received by the Hon'ble Mr. Robinson as Governor at Baipur, and by the Duke of Buckingham as Governor at Madras. We are also told that Mr. Robinson is to be made a K.C.S.I., and His Grace the Duke a G.C.S.I., at the installation in Calcutta.

SOMETHING very suspiciously like a murder by a Chetty or Chetties is reported in Colombo. A cook in the employment of a chetty firm saw, it is said, some money stolen, or was suspected of having stolen money, and incurred displeasure. He went amissing, and his body was found buried. An inquest and *post mortem* examination were held yesterday, and four of those concerned have been taken into custody by the Police.

AT a recent meeting in Madras, Dr. George Smith broached a somewhat novel idea. It was nothing less than that the Prince of Wales should be treated to a native drama, thoroughly well acted. The doctor thought that this could be easily done by importing the necessary elements from Madras. But leaving the question of well acted native dramas aside, what, we ask, would His Royal Highness be able to make out of such a theatrical medley?

IT is stated in a Madras telegram to the *Times of India* that "Government have resolved to establish an Agricultural College at the Model Farm, Mr. Robertson being the Principal, to cost about fifteen thousand rupees. The educational course will be for

four years, and will be for all classes. There will be an entrance examination." Provided things are not taught that cannot be applied to any practical use on Indian soil or under Indian agricultural conditions, we feel sure the College will prove a useful institution. Special attention ought, we think, to be given to the subject of the cultivation and curing of tobacco, and to the improvement of other products of the soil which are not now most valuable only because sufficient attention is not paid to them.

BURMAH.

THE reported disturbances between the Burmese emigrants and the Siamese in the northern districts of Siam have attracted the attention of the Siamese Government. Some of the Burmese are supposed to have been spies from the King of Burmah, but those who come with the intention of settling will be welcomed, as many parts of Siam want population to develop the resources of the country.

A PRIVATE letter from Mandalay to the *Rangoon Mail* states that the King is now wonderfully kind to the Chinese traders. He has accepted their presents, which were declined on a late occasion of a feast by one of the Queens. Instructions have likewise been issued to refund the duty levied on "returned" goods, and orders have been given to headmen of villages to afford every facility in recovering outstandings, or redressing grievances of Chinese. The King blames his ministers for past misunderstandings, and people are all wondering at the sudden change of his attitude towards the Chinese.

ASIA.

THE *Hochi Shimbun* states that a bookseller at Kumagaye in Bushiu has opened a room were newspapers may be read without charge, but no one ever comes to it.

THE reorganization of the Russian calvary, just ordered by the Emperor Alexander, amounts to the permanent mobilisation of some 50,000 horse. In accordance with this important measure, the greater part of the cavalry in European Russia will be always kept on the war footing, and stationed along railway lines, so as to be ready to act at a moment's notice. The measure, which is to be carried out this autumn, is to be immediately followed by the distribution of Horse Artillery among the fourteen new cavalry divisions.

THE issue of more stringent regulations for the guidance of the Japanese newspaper press has attracted considerable discussion both in native and foreign circles. Practically they differ but slightly in detail from the regulations first published with this view, but their re-issue at this moment is felt to indicate a determination on the part of the Government to put them in force in case of need, or in case of a fair warning failing to reach the offenders. Some sections of the native press have lately exhibited a rancorous and violent spirit in commenting upon the acts of the Government, and this, doubtless, has provoked repressive measures. It has also been notified that *employés* of the Government are henceforth forbidden to communicate to the Press any matter affecting their respective departments.

A [illegible] from Tientsin to the *North China Herald* gives the following account of the supposed insult to Mr. Wade, which has been so much magnified by telegrams: "Mr. Wade, accompanied by his Secretaries, was about to pay a visit by appointment to H.E. Li Hung-chang, and had reached the gateway of the yamen, when further progress was barred in the usual manner, pending the 'invitation' to enter, which the host would give on cards being presented. On the occasion in question, the delay in opening the gate was so prolonged that H.M's Minister caused his chair to be turned round, and proceeded on his way homewards, although pursued and besought to return by emissary after emissary. The Chinese Secretary was sent back to the Governor-General to explain, and that high officer came a few hours later on the same day to call on Mr. Wade at the British Consulate. The blame was laid on a gatekeeper and others, who had been punished in consequence. The Governor-General's visit at the Consulate lasted over three hours. His Excellency's people appear to have been much more on the alert on subsequent occasions!"

THE insurrection in the Turkish provinces is rapidly extending, and there are signs of great uneasiness at Constantinople. A large part of Bosnia, in addition to the Herzegovinian province, is now in a state of insurrection. The towns of Dubicza, Berbir, and Kostanicza are stated to be in flames, and many Turkish nobles are reported to have been slaughtered. A *Daily News* telegram says that several Croatians have joined the insurgents, and fears are entertained that the rising may develop into a religious war, as it is believed that in some instances the insurgents are led by priests. A force of about 3,000 men, chiefly composed of Dalmatians and Montenegrins, is endeavouring to cut the communication between Mostar and Hevecine. Two hundred and fifty men, recruited in Dalmatia, have occupied Berinkle, and another band of 1,500 men, also nearly all Dalmatians, is marching upon Booktche. From its Prussian correspondent the *Times* hears that the Turkish troops being rather less than 10,000 men, the insurgents who are armed with breachloders and seem to experience no lack of money, have obtained some advantages in the guerrilla warfare they are carrying on in the hills. The rising at Gradiska, or Berbir, a fortified town of some importance, only separated from the Austrian frontier by the Save, as well as the reported outbreaks at other places, are now placed beyond doubt; and communication with the northern districts of Bosnia is thus becoming as difficult as it has been in the more southern parts since the revolt in the Herzegovina. About a thousand Turkish troops have been landed at Klek, where they were joined by 1,500 infantry, 100 cavalry, and two guns sent by the Pacha of Mostar. This reinforcement was probably deemed necessary in order to enable the troops to march to Mostar with some degree of safety, the insurgents having mustered strongly in the mountain gorges; but it is reported that the troops refused to proceed along the dangerous route. A portion of the Turkish garrison at Trebinje have made a sortie which does not seem to have been attended with success.

THE *Goloss* calls attention to the increasing frequency of fires in Russia. "One fire" it says "is scarcely extinguished before we hear of another. After Morschansk had been destroyed, the best parts of Briansk and Pultusk were reduced to ashes, to say nothing of the many disastrous fires in the country districts. Public benevolence, which had been absorbed by the disaster at Morschansk, had to be diverted to the relief of other sufferers. The first important example in this respect was given by the Emperor, who subscribed 15,000 roubles for those who had suffered most from the fire at Briansk; and it is reported that some persons propose to form a private society with the special object of mitigating the evils suffered by the country from such causes. Seeing that these evils have acquired a chronic character, the establishment of such a permanent society might be of great value. It could not only collect subscriptions for the relief of those whose property have been burned, and see to the just and timely distribution of the amounts subscribed, but extend its sphere of action so as to exercise a certain supervision over the fire insurance companies—which, by allowing property to be insured far above its value, tempt dishonest people to incendiarism, and also over the existing means of protection against fires and the organization of volunteer fire brigades." The *Goloss* adds that, after suffering from the ravages of fire, Russia is now threatened with a famine. In many districts that harvest has proved a complete failure. The drought has destroyed the grass and the corn, and heavy rains, hailstorms, and destructive insects have completed the ruin. "From all sides," says the writer, "we hear the complaints of landowners, and agriculturists. Last year there was a harvest, but low prices; this year prices are good, but there is nothing to sell. No one is satisfied but the speculators who bought stores of corn last year and now sell them abroad at a great profi. It would be well if the Government took some general measures in view of the coming scarcity.

LITERARY.

WE read that Mr. Edwin Arnold, Editor of the *Daily Telegraph*, and formerly Principal of the Poona College, has in the press a metrical translation of the *Gita Govinda* of Jayadeva.

IT is with pleasure we acknowledg the receipt of the first number of what promises to be a most useful and valuable "Hindustani English Dictionary." The work, the first part of which is in every respect well got up, is to be completed in about 25 parts of 48 pages each, forming one large volume. As stated in the preface, "the chief features of the present work are the prominence given to the spoken and rustic mother-tongue of the Hindi speaking people of India; the exhibition, for the first time, of the pure, unadulterated language of women; and the illustration given of the use of words by means of examples selected from the every day speech of the people, and from their poetry, songs, and proverbs, and other folklore."

GENERAL.

ALL the immigrant depots in Otago are empty, though immigrants have been pouring in steadily. The ships "James Nicol Fleming" and "Aldlingdove" are seventy days out, with nearly 700 souls on board.

IT is proposed to form a company in Melbourne, with a capital of £5,000, for the purpose of sending a colonising expedition to New Guinea. The projectors contemplate the purchase of a small vessel and the establishment of a factory or trading station at Port Moresby.

IT has been reported that the remains of Leichardt and his fellow-explorers have really been discovered at last, but so many similar reports made from time to time have on investigation proved unfounded, that confirmation of the statement is required before credence can be given to it.

A TELEGRAM from New Plymouth states that Caoka, the celebrated Hauhau chief, who during the late war directed their engineering operations, is dead. His death will relieve the Government of much difficulty in procuring further additions of territory.

THE sugar season in Austria in 1874-5 has been one of the worst known. From the month of August 1874 to the end of February 1875 only 928,458 tons of beet-root were cultivated, while in 1872-3 the quantity was 1,668,000 tons. The reason of this great difference is that the cultivation of the beet-root had extended during the last year or two, so as to be very favourable to the farmers, but very unfavourable to sugar manufacturers.

THE committee of the Netley Hospital Charitable Fund are in urgent want of subscriptions, The charity was instituted in 1872, for the purpose of relieving the wives and families of those soldiers who are taken into the hospital on their return from foreign stations. The Government allows the women and children a certain amount of necessaries, but it is often desirable to supplement the Government allowance. The committee, whose objects are most praiseworthy, are unfortunately hampered by the precarious nature of their income. Surely each regiment out here might give a small annual subscription. During the last twelve months only

nine regiments subscribed in this way. The committee, with the hearty approval of the Commander-in-Chief, have therefore appealed to the Army in India. Subscriptions may be sent to Major C. C. Scott Moncrieff, R. E., Meerut, their Honorary Secretary.

THE following is said to be a complete analysis of the military strength of the various nations of Europe in 1875. Germany, it appears, has an army comprising 469 battalions of infantry, 465 squadrons of cavalry, 300 campaign batteries, 29 battalions of fort artillery, 18 battalions of pioneers, and 18 battalions of service corps. When are added the Reserves, the Landsturm, the Landwehr, and the Navy, a total of 1,700,000 men is arrived at, with annual estimates of £20,000,000. The English Army and Navy, including Militia and Volunteers, comprise 535,000 men and cost £42,800,000; Austria has 535,000, men, costing £10800,000; Belgium 43,000 with an expenditure of £1,659,200; Denmark 54,000 men, costing £366,000; Spain, according to the regulations of 1870, possesses 270,000 men with a yearly Budget of £640,000. The law passed by the Cortes in 1872 has as yet been imperfectly applied. France has 152 regiments of Infantry, 30 battalions of Chasseurs, 77 Cavalry Regiments, 40 Regiments of Artillery, four of Engineers, and 20 squadrons of Service Corps. With the Reserve and Navy the total effective strength of the country is 1,700,000, costing £26.600,000; Greece 51,000 men, and estimate £360,000; Italy 760,000 men, expenditure £9,840,000; Holland 100,000 men, estimate £1,120,000; Portugal 73,000 men, costing £180,000; Russia has an Army in time of peace of 188 regiments of infantry, 82 battalions of riflemen, 48 battalions for frontier service, 56 regiments of cavalry, 310 batteries of artillery, 14 battalions of engineers, besides irregulars and reserves. With the fleet, the effective strength of the country is 1,550,000; men with a Budget of £27,200,000; Sweden 160,000 men, costing £1,120,000. The effective strength of Switzerland is approximately 180,000 men, costing only £360,000: Turkey 300,000 men, with estimates of £5,680,000. On a war footing, therefore, the Armies of Europe are 9,333,000 men, costing annually £136,804,000.

THE following is on account of the new *Mann Boudoir* sleeping car. which appears to be a great improvement on the Pullman, "It runs with wonderful steadiness, which is a considerable advantage; even when put at the end of a train which was going at 60 miles an hour, it oscillated very slightly. It has another advantage over the ordinary saloon car. Instead of being in one large compartment it is divided into small *boudoirs* for the accommodation of three or four persons. In these the berths are placed one above another like the berths of a ship, and are placed across the compartment, which prevents any rolling motion. The steps by which the upper sleeper mounts to his couch serve in the day time as a handy little table, at which the passengers can write comfortably, and the lower berths make admirable sofa chairs. The operation of bed-making by the most simple and ingenious of processes can be performed in a couple of minutes. When the passenger is tired of his well-carpeted and upholstered private room, he may stroll up and down the corridors, in which there are a refreshment bar and lavatories. Electric bells are at the disposal of each passenger, who by them can summon an attendant, whose special duty it is to wait upon the occupants of the cars. In winter the carriages can be kept at a uniform temperature by means of a heating apparatus, and in summer they carry an ice safe for the convenience of travellers. They are admirably lighted at night, and provided with a supply of reading lamps, in addition to the other lamps. Another subject which has received considerable care is the ventilation, which is so contrived, that while the carriage is kept well aired, the dust is completely excluded. About fifty of these cars are already in constant use on the continent, and most of the carriages used by the Royal Family are constructed on the same principle." Could not a few of these comfortable conveyances be introduced on our Indian railways?

WE hear of a cheap and easy cure for elephantiasis—if it is a cure; and though the story told, has the ring of improbability about it, less likely things have sometimes been found effective. A contemporary tells us of a curious experiment in a hospital at Rio Janeiro. Some time since, an ingenious antiquary announced that the elephantiasis of Brazil was the identical disease that used to be cured among the ancient Greeks by the bite of a snake. The assertion caused some considerable stir, and one of the patients of the hospital resolved to try the experiment. The physicians and his friends assembled on the appointed day, and a rattle-snake was brought into the room in a *gaiola*, a species of cage. Into this the individual introduced his foot with the most perfect presence of mind. The reptile seemed to shrink from the contact, as though there was something in the part which neutralized its venom; when touched, the serpent would even lick the foot without biting. It became necessary at length for the patient to squeeze the reptile under his foot in order to receive a thrust from its fangs. The desired thrust was eventually given near the base of the little toe. So little sensation pervaded the member, that the patient was not aware he was bitten, until informed of it by those who saw the act. A little blood oozed from the wound, and a slight swelling appeared about a couple of hours after the foot was withdrawn from the cage, but no pain was felt. A period of intense anxiety now followed, while it remained to be seen whether the strange application would issue for the better or for the worse. The effects after a day became gradually manifest, although it was evidently retarded by the disease which had preoccupied the system. On the third day the man died without suffering. It must be remembered that persons bitten by a rattle-snake, have never been known before to survive for more than a few hours at the utmost, and that the most agonising pains set in soon after the poison has entered the system, lasting till death.

MILITARY ORDER.

BYASS, Captain L. B., to Europe on furlough for two years.
BRUCE, Lieut. Colonel J. C W., to Europe on furlough for two years.
CLARKE, Major T. G., to act as Secy. to the Chief Commissioner.
CRAWFORD, Capt. H. P. R. F., to be Major.
JAGO, Capt. R. S., to be Major.
KENNY, Lieut. E. E., admitted to the Madras Staff Corps.
LITCHFIELD, Capt. R. F., to officiate as District Supdt. of Police 1st Grade, in British Burmah.
RAMSAY, Lieut. Colonel E. B., permitted to retire from service on pension.
SHAW, Capt. E., to be Asst. Commissioner, 2nd class.
PEARSE, Major C. J., to officiate as Depy. Commissioner, 2nd class.
WINGFIELD, Capt. A., to be Major.

CIVIL GAZETTE.

BENGAL.

AHMED, Moulvi A. U., Depy. Magistrate, Pubna, to have charge of the Serajgunge Division.
ADDY, Baboo D. N., Depy. Magistrate and Collector Ranaghat, to act temporarily as Vice-Chairman of the Municipal Commissioners for the town of Santipore.
BABONAU, Mr. J. T., to act as Sub-Deputy Collector at Jahanabad in the District of Burdwan.
CHOWDRY, Baboo D. D., Depy. Magistrate and Collector, Meherpore Division promoted to the fourth Grade, Subordinate Executive Service.
CURRIE, Mr. G. M., Offg. Joint Magistrate, Begoo Serai Division transferred to Dacca.
CHUCKERBUTTY, Baboo N. C., Depy. Magistrate, Dinagepore, leave for three months.
GUPTA, Baboo J. N., Sub-Deputy Collector Jehanabad, leave for two months.
GRAVES, Mr. F., Asst. Supdt. of Police Jessore, to act as District Supdt of Police Cuttack.
LARMINIE, Mr. W. R., Magistrate and Collector, Bankorah, to act in the 1st Grade of Magistrates and Collectors.
MOOKERJEE, Baboo S., Depy. Magistrate and Collector, Buseerhut Division, promoted to the fifth Grade, Subordinate Executive Service.
MOSLEY, Mr. E. S., Offg. Magistrate and Collector, Durbungha, to act in the 2nd Grade of Magistrates and Collectors.
PALIT, Baboo B. N., Sub-Deputy Collector, Khoonla leave for two months.
REBELLO, Mr. P. T., to be temporarily a Sub-Deputy Collector of the 2nd Grade in Hazareebaugh.
SEN, Baboo A. C., Depy. Magistrate and Collector Backergunge, leave for two months.
WARDEN, Mr. W., Offg. Collector of Customs and Offg. conservator leave for two month's.

PUBLIC WORKS DEPARTMENT.

BAKSH, Baboo M. M., Acct. 4th Grade, transferred to the Gurdaspore Division.
DE, Baboo K N., Acct. 4th Grade, transferred to 2nd Division Lahore and Peshawar Rd.
HARINGTON, Mr. W. S., to be Executive Engineer of the 1st Grade.
LAWFORD, Mr. A. C., to be Executive Engineer of the 1st Grade.
LAW, Major G. V., to be Executive Engineer of the 2nd Grade.
RUNDALL, Mr. J. W., to be Executive Engineer of the 1st Grade.
SMITH, Major C. J., to officiate as Chief Engineer of the 3rd class and Consulting Engineer for Railways.
THOMPSON, Capt. R., to be Executive Engineer of the 2nd Grade.

MADRAS.

CALDWELL, Mr. E. C, to act as Inspector of Schools, 1st Grade.
CHETTY, Baboo A., 1st Grade district Munsif of Madura, to act as Subordinate Judge of Tellichery.
GARTHWAITH, Mr. L., to act as Inspector of Schools, 2nd Grade.
LISTER, Mr. A. L., furlough to Europe for one year.
MENON, Baboo K. K., two months' leave.
TYER, Baboo M. R. to be Registrar of the Nilgheeries.

OUDH.

GIBBON, Mr. R. F., to be a member of the Municipal Committee Rai Barriely.
PERKINS, Lieut-Colonel J., to officiate as Commissioner of the Lucknow Division.
REID, Colonel J., two months leave.
WALKER, Mr. A. G., Asst. Commissioner, Gonda, two months leave.

LYALL, RENNIE & CO.

BONUS YEAR 1875.

INCORPORATED BY ROYAL CHARTER AND SPECIAL ACTS OF PARLIAMENT.

NORTH BRITISH & MERCANTILE INSURANCE CO.

ESTABLISHED 1809.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

The Silicate Paints & Griffiths' Patent Enamel Paints.

All Colors always in stock.

F. HARLEY & CO.,

Agents for India, Calcutta.

ALL BILLIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S
ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERNATIVE TONIC.

DR. E. J. LAZARUS'S
ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at *Rs. 2-8 per bottle.*

Notice to Mariners.

NEW PLAN
BY THE
ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATE, with 80 per cent Invested Solely for Policy Holders.

Example.

	With Profits.
A, aged 30, wishes to Assure Rs. 1,000.	
Annual Premium at Indian Rate ...	Rs. 36 0 0
Annual Premium at English Rates	„ 23 10 8
Difference ...	Rs. 12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses and Forms of Proposal can be obtained from any of the Agents, or from

THE INDEPENDENT ORDER OF GOOD TEMPLARS.

PRINCIPLES.—Total abstinence, enforced by a life-long pledge, and the absolute prohibition of the manufacture, importation, and sale of intoxicating drinks.
POLICY.—Broad, allowing Lodges to act according to locality, times, and circumstances.
BASIS.—Non-beneficiary, the object being to do good rather than to receive benefit.
FINANCIAL SYSTEM.—Entrance fee may be as low as Re. 1. Quarterly subscription—Males, 12 ans.; Females, 8 ans.
ELIGIBILITY.—Male and Female are admitted, and are on a perfect equality as to eligibility for office, &c.
MEMBERSHIP.—About 800,000 Members, including Military Officers, Clergymen, Governors, College Professors, Lawyers. Directors, Merchants, Clerks, Soldiers, Sailors, and Mechanics.
SCOPE.—The Membership is fraternal, all being entitled to the privileges of the whole Order.
MODE OF WORK.—Employment of competent Lecturers, printing of temperance works, and formation of temperance libraries.
RESULTS.—The violations of pledges amount to only about 5 per cent. annually.

Great Indian Peninsula Railway.
NOTICE.
Reduction in the Rates for Grain to Bombay

THE Public are hereby informed that, on and after the 1st September next, the rates over this line, for grain only, when booked to Bombay from stations of railways beyond Jubbulpore and from stations of the Holkar State Railway, and also from stations between Jubbulpore and Khandwa and Nagpore and Badnera, all inclusive, will be reduced.

Full particulars can be obtained on application at any of the stations concerned, or to the undermentioned.

HENRY CONDER,
General Traffic Manager.

No. 1707A. of 1875.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon:—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold: said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to: (1) Haldwani; (2) Kaladungi (*viâ* Naini-Tal); and, (3) Ramnagar (*viâ* Khyrna). From Haldwani to Bareilly Railway Station 60 miles over a *pucka* cart-road; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road; and from Ramnagur to Moradabad 45 miles *viâ* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

1, 2, 3—markets at the foot of the hills.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable: a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godown, and numerous out-offices, all slated; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given: failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,

Offg. Secy. to Govt., North-Western Provinces.

No. 1708A.

COPY forwarded to the Commissioner of the Kumaon Division for information, with reference to his letter No. 681, dated 23rd July 1875.

No. 1709A.

COPY, with 50 spare copies, forwarded to the Secretary to the Bengal Chamber of Commerce, with the request that the Notification may be distributed to all firms interested in tea cultivation.

No. 1710A.

COPY also forwarded to the Superintendent of the ——— with the request that the Notification may be published in the ——— not less than four times.

THE ROYAL VISIT TO INDIA

C. LAZARUS & CO.

Beg to announce that they have been appointed.

Sole and Special Agents

IN INDIA FOR

J. DEFRIES & SONS,

By appointment to

HER MAJESTY THE QUEEN,
H.R.H. THE PRINCE OF WALES,
H.I.M. THE SULTAN OF TURKEY,
&c., &c., &c.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra, Fountains, Wall and Billiard Lights, and the Patent Prismatic Crystal Illuminations

for Gas, Oil, and Kerosine.

J. DEFRIES & SONS

had the honor of carrying out the

entire arrangement in the City of London of the Decorations and Illuminations

ON THE

Public Thanksgiving Day for the Recovery of H.R.H. the Prince of Wales, as well as for H.R.H.'s State Visits to almost every Town in the United Kingdom.

were also appointed to carry out the

Illuminations and Decorations both in Russia and England, on the occasion of the marriage of their R. H's. the Duke of Edinburgh and the Grand Duchess Marie Alexandrowna of Russia.

C. LAZARUS & CO.,

Sole and Special Agents

FOR

J. DEFRIES & SONS,

are prepared to furnish

SPECIAL DESIGNS AND ESTIMATES

To suit any Building, Street or Garden, for the carrying out of the entire Decorations and Illuminations, either with Gas or Oil, combining among the novelties the Lime and Electric Lights and their Patent Prismatic Crystal Illumination of any design, the Prince of Wales's Plume, Medallions, Mottoes, Shields, Laurels, Crowns, &c., &c.

FLAGS, TROPHIES, VENETIAN MASTS,

And Floral Decorations in every variety. Chinese Lanterns and variegated Illumination Lamps in every Colour for Gas or Oil.

C. LAZARUS & CO.

Are also in a position to arrange and carry out

GREAT FIREWORK DISPLAYS

IN HONOR OF THE

ROYAL VISIT TO INDIA

OF H.R.H. THE PRINCE OF WALES,

And for which they are prepared to supply

Special Programmes and Estimates.

Early orders are solicited, so as to allow ample time for perfect arrangements to be made.

Samples of Devices and Illumination Lamps may be seen, and prices ascertained, on application to

C. LAZARUS & CO.,

CALCUTTA.

PRINCE OF WALES'S

ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME,

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,

No. 10 and 11 Park Street.

MY DEAR MR. FLEURY,—I ... willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13th May 1875. E. LAFONT,

Rector.

OPINION OF BRADFORD LESLIE, ESQ., C. E.,

Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.

Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary.

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

GREAT EASTERN HOTEL, NIAUDE,

Calcutta, 17th January 1874. *Secretary.*

Calcutta, 28th December 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,

F. & C. OSLER.

P. W. FLEURY & Co.,

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.
20 „ Soluble } Guano Phosphate.
4 „ Insoluble }
Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.
Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a Guarantee of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

DR. DE JONGH'S

ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescsibed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects, I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion on DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.

POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.

ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 *15, 20, 25*, or *30* years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at *50, 55, 60* or *65* years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on *the participating scale.*

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra
premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2115.] Calcutta: Saturday, September 25, 1875. [Vol. XLI.

EDITORIAL NOTES.

THE Baptist Missionary Society has sustained a great loss in the recent death of two of its Missionaries. One of these, the Revd. John Sale, a man of long experience and of excellent ability, died in England whither he had gone to seek restoration of health. The other, the Revd. John Mintridge of Jessore, had but newly joined the Mission, and was engaged in the study of the Bengalee language. His progress had however been so satisfactory and his promise of usefulness was so bright, that his death is the occasion of great distress to all who knew him. Mr. Sale came out to India in 1849, and was at first associated with the Revd. J. C. Page in the Society's Mission at Burrisaul. After some years, he was transferred to the Mission in Jessore of which he took charge. Towards the end of 1858 he removed to Calcutta, where as Pastor of the Lall Bazar Church, Secretary of the Benevolent Institution, and a helper in every good work he was well known and greatly esteemed. It deserves particular mention, that in 1860 he was appointed by the Government of Bengal a member of the Indigo Commission, and gave unwearied attention to the duties involved in this appointment during its long session. On the final removal of Mr. Page from Burrisaul in 1868, Mr. Sale was requested by by his brethren to take charge of that Mission; and there his remaining days were spent until the end of 1873, when he returned to England in broken health. No particulars of his death have yet been received. It must have been somewhat sudden and unexpected, and was probably occasioned by heart disease from which he had for some years suffered.

The Society in connection with which these gentlemen so faithfully laboured, can ill afford to lose either the mature experience of the one or the youthful energy of the other. The great cause to which their lives were pledged, however, cannot fail to make progress. Men may, and must die; but God and Truth live and will triumph.

***

To shew how little trust can be placed in the vaticinations of military men concerning the progress of Russia in Asia, we may mention that it is now about 20 years, since General Jacob assured us that if arrangements for the defence of our North-West Frontier were not made by advancing to Quettah, "we should lose our Indian Empire within a generation of years." The impatience of the Army for active service, has had more to do with the perpetuation of this alarm, than any other cause. Our not driving every Russian back to the North of the Caucasian range, and making Georgia and the Caspian our frontier, was held by Jacob to be an enormous error (page 345, Views and Opinions.) Though fifty men of equal reputation advocated such views we should declare them to be insane. Military men seem to take leave of their senses when they come to this subject. We find it hard to believe that Sir Charles Napier held the same views as Jacob, but we are assured it was so. For Jacob was simply mad about his Sindh horsemen, and full of the notion of holding a great military and diplomatic command at the head of a force of his own organizing somewhere between the Bolan pass and the Caucasus. The line he would have had us seize is 2,000 miles as the crow flies from the frontier, but it was "an enormous error;" we are to understand that we did not seize this line in 1856. Another of these writers, Mr. Halliday, told us (1872) that this line should undoubtedly have been made our base of operations, "whereas Russia has now got it and is an overpowering strength on the Caspian." The whole of the Caucasus line ought to have been seized by Great Britain which would probably have enabled her to retain India! (page 138, *Retention of India.*) It is Mr. Halliday who tells us that Sir Charles Napier held this view. We ask the reader, who is not familiar with the question, simply to take up the map and look at it, when if he knows anything of military operations he will put it down in blank amazement at such counsels.

WE are now passing through the most critical season of the the year, for the crops. It matters little how favorable the previous months have been, if the rains fail us just now, at the period when the rice is coming into ear, and needs moisture for its proper development. We want no heavy rain after the 10th September, but a recurrence of showers during the weeks we are now passing through, sufficient to fill the rice and give promise of its coming to maturity. Upon the whole, prospects are favorable throughout the country, in spite of much local damage from floods. Sindh appears to be the only part of India where there has been any drought this season; great damage to the *Kharif* crops in that province being reported, owing to the fall of the river and consequent failure of the Canals. Three weeks more of moderate showers will give the country an abundant harvest; three weeks of drought would bring back scarcity once more, and spoil the prospect of next spring's wheat harvest.

***

THE young Nizam will meet the Prince of Wales at Bombay after all, if we may trust what the Bombay papers say. If he does so, it will not modify in the least our sense of the error committed in requiring the attendance of the child: for the facts are really as stated by us last week. Very extreme pressure must we are certain have been put upon the Minister, to obtain the acquiescence of the Hyderabad Court in this arrangement. For we can think of no inducement sufficient to have overcome the dread with which the journey was regarded, unless it were a hint that "the Berars" might probably be the reward of the child's appearance. We shall not conceal our conviction of the gravity of the step which the Supreme Government has taken. For we are satisfied that the attendance of the young Prince, if he really has promised to attend, has been secured by a course of conduct that will not bear the light. And we say this advisedly. Our relations with the native princes are so unsatisfactory, that an open scandal of some kind or other that will force the question on the attention of Parliament, has even become desirable, and we more than suspect that our Foreign office will have furnished it in this incident, if it be really true that the Nizam's ministers have at last accepted the invitation. It was a profound error to have given such an invitation at all, but it will be a far worse one to deal with, if it turns out—as we fear it will—that downright terrorism and threats have been employed to rescue the Foreign office from the false position in which its own incapacity had placed it. By its own error it brings matters into a position from which escape with complete dignity is difficult, and then forces the solution most agreeable to itself, at all hazards.

***

THE *Englishman* is right we fear when it ascribes the bitterness with which every act of Sir Douglas Forsyth has been assailed to some personal hostility to that officer in the department with which he is specially connected. Whatever view we may take of the success or otherwise of the Burmah Mission, it certainly is not fair to make Sir Douglas Forsyth responsible for its issue, as he seems to have accomplished all he was really sent to do.

***

IF Sir Richard Temple does not disassociate himself promptly from all complicity in the proceedings of the municipal Commissioner, it is not Mr. Hogg only that the present bad municipal weather will bring to grief. A very simple incident in the administration has now assumed the dimensions of a scandal, and the atmosphere is charged with all the elements of a heavy storm. We have never been violent admirers of Municipal institutions in India, but it would be sheer insolence to affect any disrespect for the body of gentlemen in this city, who have gathered around Mr. Roberts, and are bent upon making him the Vice-Chairman of the Bench of Justices, from a full and honest conviction that he is the proper man to fill the office. These gentlemen form the very heart and substance of the Bench. They are the only men who take any real interest in Municipal affairs, or who ever

have taken any interest therein; and if Sir Richard Temple allows these gentlemen, to whom the community owes so much, to be swamped by the discreditable following that Mr. Hogg beckons to these meetings, when he has some dirty business or other to carry over their heads, it is not Mr. Hogg only that will suffer from the scandal. We are living in days, when conduct so unscrupulous as that which Mr. Hogg is shewing in his attempt to carry the election in a way that will be agreeable to himself is, to put it very mildly, not safe. The Commissioner plainly does not care a brass farthing who is made Vice-Chairman, so long as Mr. Roberts is not. Having supported in office to the last, a man whom the public conscience finally compelled him to remove, he now plainly does not care, we say, in the least what character his successor may bear. If it had rested with Mr. Hogg, the Justices would on Wednesday have elected to the vacant office, a man declared to be of damaged character. He *tried* to get him elected; went to the meeting for the very purpose of getting him elected; and had summoned his whole "rag, tag and bob tail following" to assist him. And had it not been for the ready wittedness of Kristodas Pal he would have succeeded. The Justices should at once demand Mr. Hogg's retirement. He is plainly not fit to hold the appointment. He seems to have no sense of responsibility whatever. There is a Municipal hurricane gathering; and we advise Sir Richard to give it as wide a berth as the law of storms can suggest to him.

***

ALTHOUGH the new Punjab Judicature Act was made law in a hurry and declared to be in force from the moment it was passed, the ardour of the local authorities seems to have cooled somewhat over the matter. The only parties who as yet have benefitted by it are the rural Tahsildars, whose civil work has been taken over by the Munsifs. The principal object therefore of the measure, the relieving the Deputy Commissioners of appeals, has not yet been accomplished. This relief was to be given by the new class of judicial Assistants, with regard to whose appointment there is a hitch. The matter has unfortunately got mixed up with the Civilian "grievance" of small pay. The appointment of twenty-six judicial Assistants, and allowances for that number of covenanted civilians have been duly passed by the Finance Dep. but some of the best judicial officers in the Province are uncovenanted men, judges of the Small Cause Courts, who were long since told that their judgeships were secure. But these Small Cause Courts are now to be abolished. The men are eminently qualified for the new Assistantships; but if appointed they cannot draw the allowances which the covenanted men of the same standing would receive. It is this hitch we believe that delays the superior appointments being made. The matter has been referred to the Supreme Government which has not yet vouchsafed an answer; while the local belief is that the proposal is missing from the Home Secretary's box. In the mean time, the Government saves the new allowances which though sanctioned from April 1st cannot now be drawn until next month at the earliest. Mr. Melvill's being summoned to Simla may be the means of the matter being finally settled one way or another.

***

A CORRESPONDENT writes from Sylhet: Serious subsidencies and land slips have lately taken place in the village of Cherra in the vicinity of the Khassi Hills. Several deaths are reported and many houses have been engulfed. The whole neighbourhood was convulsed in the late Earthquake and the hills seemed about to divide asunder. Water and steam streamed from the breach, which closed up again. A few months previously, half the village was accidentally burnt down with great loss of property. The houses are structures of bamboo and grass, upon "cellars" wrought in stone, where the people keep all their property of value. The village which contains some 1,500 houses and 7,000 inhabitants is built on a very abrupt slope, and extends from the base (which is level with the plains) to a height of 1,500 feet. This is one of the largest villages in the Hills and the most picturesque. The villagers are experts in litigation, and combine the bad characteristics both of the astute Bengalee and the mountaineer. The rainfall this season is exceptionally scanty, and the weather unhealthy. Dysentery and fever are very prevalent. A short time ago it was discovered that the fish in the Soormah river and its tributaries were infested with a small red grub. The disease extends into the hill streams also, and orders have been issued to stop their being brought into any of the markets, as a great number of the people have suffered and died in consequence."

A CORRESPONDENT writes: "Has the paper currency in India no-"thing to do with the depreciation of silver? It is admitted that "the abundant supply of this metal occurring at the same time that "a gold coinage is being adopted in most civilized countries and so "diminishing the demand for *it*, has lowered its price in the market, "and it is thus sent to India already much depreciated. By main-"taining a paper currency representing this reduced value are we "not adding fuel to fire?" The question thus raised is of considerable importance, and has been before our own minds from the first introduction of a State paper currency into India. In a country like this, the effect upon prices of an increase in the quantity of money afloat therein would seem to be very *direct*. And that effect will be produced by paper as much as by *metallic* currency. Every issue of notes unrepresented by bullion will tend to raise prices, just as surely as a mint issue of so many lacs of rupees. It was maintained by Hume in his Essay on Money that an advance of prices must follow the introduction of more money into any country; while Adam Smith held that any addition to the currency in excess of what the country required, would find its way abroad, leaving prices unchanged. The truth or otherwise of these opinions would appear to depend upon the peculiar circumstances of the community in which the increase takes place. Where, as in Europe, an increase or diminution in the quantity of money afloat in the community is effected mainly by banking and discount operations, it is hard to say what precise effects upon prices will follow from either. Speaking generally, we may say that when money is abundant, prices will be high; but the term *money* is so mixed up with, and so covers the term *credit*, that we may have prices rising in spite of a steadily diminishing quantity of money. The effect upon prices of an increased issue of money, in a poor country like this, where discounting and banking are almost unknown will be far more direct and cognizable. The question is a very difficult and intricate one, but there is no doubt we think that every issue of Government notes in India must tend to raise prices. And by *tend*, we mean directly tend to such increase. The power of issuing such notes is therefore an engine that judiciously used may work immense good and it must be worked very injudiciously we think to do much harm. Meantime it is certainly true that every note issued in the country tends to raise prices to the disadvantage of all fixed incomes and obligations.

***

IN reply to our statement that "there is no mint price of silver in India," the *Indian Daily News* points out that, "the provi-"sions of the Bank Act of 1844, and those of the Indian Act "of 1861 *to provide for a Government Paper Currency*, are almost "precisely similar as regards the obligatory purchase of bullion. "Under the English Act all persons whatever are entitled to "demand, from the issue department of the Bank of England, "bank notes in exchange for standard gold bullion, at the rate "of £3-17-9 per ounce, and similarly under the 9th Section of "the Indian Act, parties are entitled to demand currency notes "from the Paper Currency Department, in exchange for 'standard "silver bullion, or foreign silver coin, computed according to "such standard, at the rate of 979 rupees per thousand tolahs "of standard silver fit for coinage,' which rate *is the Mint price* "of silver in India, as £3-17-9-*per oz.* is the Mint price of gold "in England."

This is true: but it is not what the writer in the *Pioneer* meant. It is doubtfully wise, moreover, to import the term "Mint price" into India at all; for it is very misleading. The currency law of both countries gives a right to the holder of gold or silver of standard quality to have it declared so much money, weight for weight, upon payment of a small seignorage. By a fiction, we call this a *sale* of the metal to the Mint at a fixed price; whereas it is simply the conversion, at private option, of so much private bullion into money, weight for weight, at a small fixed charge of seignorage. While this private option lasts, it is a fiction to speak of the Mint price of bullion in either country. One of the main objections to the Bank Act lies in the fact that it has done away with all distinction between bullion and money, by empowering the holders of the former to make and unmake the money of the country at their pleasure, whereas the increase or diminution of the currency should be a State act. There was a real *Mint* price of bullion before this option existed: but it is only a fiction to speak of it now, when all the bullion in the country is potential money, and may be at any moment declared so, weight for weight, on payment of a small fixed charge. A ton of standard silver bullion means simply a ton of rupees less 2 per cent of the weight for seignorage, and to speak of a "Mint price" of silver under such circumstances is only to mislead.

IT is almost permissible to ask whether Roman Catholicism in some of its aspects can properly be called Christianity at all? The venerable Newman himself tells us, that he has never yet been able to reconcile himself fully to some phases of the devotion with which the Romish Church regards the Blessed Virgin. Cardinal Manning on the other hand, with the true zeal of a pervert, has no difficulty with any part of the system whatever, and seems to find almost a morbid satisfaction in insisting upon what many Roman Catholics themselves speak of with reserve. Preaching a few weeks ago upon the Assumption of the Virgin he described the death of the Virgin, and the disappearance of her body from the grave on the third day—the growth of flowers, the melody as of angelic strains, and the fragrance, not of earth testifying to the mystery and glory of her Assumption. The Cardinal said that these things were written in the heart of the Church, the true Scripture. The word written by the Holy Ghost was only a part of the Word, but the heart of the Church was written within and without by the same Spirit; and the Church had thus been taught to believe that Mary the Mother of God was assumed to the glory of God, not in soul alone, as the saints also were, but in body also; so that she was now on the right hand of her Son, as He was on the right hand of His Father. He then proceeded to adduce various reasons for the belief in the doctrine of the Assumption—reasons which, he said, were so convincing that *he could not understand how any man with the faith of a Christian could hesitate to believe with entire faith the glory of Blessed Mary* :—

First, it was incredible that she who had known no sin could suffer the corruption of death. A second reason for the Assumption was that she had ministered to the Son of God of her substance, so that, as a saint of the Church had said, "He is what she is, and she is what He is." Her substance He took; and, deifying it, He elevated it to a condition above the conditions of nature. It would be impossible to believe that she who had been, by the Divine right of her Son, assumed to be with Him in His kingdom, should be with Him in spirit only. It could not square or harmonise with the true views of that blessed body in which He took His manhood, and in which He reigned over heaven and earth, that it should lie in the grave. No. She stood there the Queen of angels and of saints, with a dignity and sanctity exceeding theirs, and with an essential glory also exceedingly theirs in proportion as her sanctity exceeds theirs. She was the Queen of Heaven, the second Eve.

Cardinal Manning must know how all this jars upon multitudes of minds. But a sort of desperate hope seems to be indulged by these men that the mind of Europe is to be stormed by audaciously representing the superstitions of by-gone ages as vital truths of Christianity. While the venerable and learned Dollinger is denouncing these superstitions all round, Cardinal Manning cannot sufficiently proclaim his ardent belief in them all.

***

SOME of our readers may like to see the official correspondence concerning the Commissioner of Jhansie, in the matter of the outlaw Randhir Singh :—

From A. Howell, Esq., Offg. Secretary to Govt. of India, to Sect., Govt. N.-W. P., dated Simla, 11th August 1875.

SIR,—I am directed to acknowledge your letter No. 388, dated 26th May last, with enclosures, including a protest from Colonel J. Davidson Deputy, Commissioner, Jhansi, against the charges, imbecility and cowardice which he considers to be conveyed in the 13th para. of the resolution of the N.-W. P. Government dated 4th idem, on the subject of the failure to capture the outlaw Randhir Singh.

2nd. In your letter No. 387 of the 26th May, it was pointed out to Colonel Davidson that the Resolution in question was limited to the expression of the Lieutenant-Governor's opinion as to Colonel Davidson's negligence; and it was added, with regard to the charge of cowardice, that the Lieutenant-Governor "is quite prepared to disclaim the slightest wish to throw any doubt whatever in Colonel Davidson's courage." The Governor General in Council is satisfied that no such imputation was intended. The facts of the case in no way brought into question Colonel Davidson's courage, and the 10th and the subseqent part of the 13th paras. of the Resolution clearly distinguish the part of the failure for which he was responsible. It is clear, therefore, that in the passage complained of carelessness only was intended to be imputed to Colonel Davidson.

3rd. It is only right, however, that an officer in Col. Davidson's position should be keenly sensitive to any imputation which may be supposed, however erroneously to be thrown upon his courage and therefore I am to request that your letter of 26th May with enclosures from and to Colonel Davidson, together with this letter, may be published in the Gazette of the N.-W. P.

4th. The Government of India agree with His Honor in considering that Colonel Davidson was negligent in the performance of his duty, and they regret that he should have rendered himself liable to just censure on this account.

(Sd.) A. HOWELL,
Secy. Govt. of India.

No. 493.

From Secy. to Govt. N.-W. P., to Col. J. Davidson, Deputy Commissioner Jhansie, dated Naini Tal, 25th August 1875.

SIR,—In continuation of my letter No. 387 dated 26th May, I am directed to forward for your information a copy of a letter from the Govt. of India in reply to your protest against the charges of imbecility and cowardice which you consider to have been implied in the Resolution of this Govt. dated 4th May 1875, regarding the Jhansi outlaw.

2. His Honor the Lieutenant-Governor, as you have already been informed, had not the slightest intention of imputing to you anything beyond negligence in the performance of your duty. But while the Lieutenant-Governor is still of opinion that the terms of the Resolution of 4th May were not open to the construction you have put upon them, an opinion in which the Govt. of India has now expressed its concurrence, he desires to express his regret that any such misunderstanding should have occurred, and to repeat that the words "imbecility and cowardice" were not applicable to you, as His Honor has never thought of calling into question your general capacity and courage.

(SD.) J. MACKINTOSH,
Officiating Secy. to Govt., N.-W. P.

***

THAT the silly season is well set in has become painfully evident. Our newspapers are getting singularly devoid of news and one of our daily local contemporaries has devoted a long leader to prove that Anglo-Indian ladies are not after all types of the demi-monde. Surely dissipating phantoms called up by the author of Dustypore and Florence Marryatt, is a tyrannous use of a giant's strength. We do not pay our contemporary the bad compliment of supposing that he thinks the type of English ladies in India portrayed in these books to be the usually received one, either at home or in India.

***

IN the list of American failures, announced by the mail as the result of Duncan, Sherman, and Co's suspension, we observe the firm of Ford and Co., the publishers of Mr. Beecher's books. The suspension is attributed to the falling off in the public demand for those publications, particularly the "Life of Christ."

***

THERE seems to be a growing tendency amongst Companies at home, to raise the money they require by debentures in preference to the issue of shares, a tendency that speaks well, we suppose, for the solid character of their enterprise as a whole. The following figures are taken from a return of the capital, proposed to be raised by Railway and other Bills brought before Parliament in the last nine years :—

	No. of Bills.	By Shares. £	By Loan. £	Total. £
Return for 1866	634	125,638,785	49,851,861	175,490,646
„ 1867	321	24,947,447	17,691,328	42,638,775
„ 1868	228	15,269,990	9,937,366	25,207,356
„ 1869	212	17,756,335	11,465,371	29,221,706
„ 1870	244	14,202,271	9,474,228	23,676,499
„ 1871	280	18,827,365	10,891,825	29,719,190
„ 1872	304	57,803,590	28,641,241	86,444,831
„ 1873	334	60,112,250	26,781,693	86,893,943
„ 1874	281	43,763,000	19,602,240	63,365,240
„ 1875	266	29,746,194	20,198,113	49,944,307

A VERY extraordinary Bull of the present Pope, issued privately in 1866, has just seen the light. The Italian Government as every one knows, has been obliged to legislate exceptionally for Sicily; and a very wide-reaching measure was proposed by the Ministry. Pressed by opponents, and by friends who thought the Bill too sweeping, the Government was obliged to tell the truth. It seems then that the Mafia and Camorra organizations have honey-combed society and all classes, including judges, police, brigands, and beggars; the root of the evil lying in the action of the priesthood. The old Bourbon officials, whom the Government have continued in office, merely do what the Vatican enjoins. The system has been in operation for 300 years, but the notorious "Bull, of Composition" was renewed it seems by the present Pope in 1866. The Ultramontane journals denied the existence of the Bull but have been silent since the text was published *verbatim* in the daily papers. The Bull arranges for the compounding of any sin, or crime, against either person, or property, at a fixed price. It is a penal code used by confessors who for a money equivalent absolve the thief, murderer, or worse, from his crimes. The sinner confesses his sin, but says that he either does not know the sufferer or cannot make restitution, when he purchases one of these fly-sheet Bulls, signs his name, pays a portion of the ill-gotten goods to the Church, and returns to his home, retaining the rest, with a good conscience. The Church it is

said gets about 30 per cent. in this way, leaving 70 to the malefactor. We take this statement from Strahan's *Evangelical Christendom*. If it is a Protestant lie; the guilt of it is very great.

***

In Mr. Price's recent memoir of the Chuar rebellion of 1794 he tells us that a perusal of the local records from which he has compiled his narrative suggests the discreditable disinclination of the authorities, civil and military, to proceed in person to quell the disturbances. "There were living in Midnapore all together—if not continuously, certainly at different times—Messrs. Imhoff (Collector), Ernst (the Assistant Collector), Gregory (Judge-Magistrate), Law (Assistant Magistrate), the Surgeon, and several European Commissioned Officers belonging to the Native Infantry Regiment located there; yet I do not observe that a single European went out on any but two or three isolated occasions, though in several instances the Chuars brought their devastations up to the very doors of the residents. The conflagration of burning villages and the shouts of the robbers were frequently seen and heard in the station, but no gentleman volunteered to go in person to lead the sepoys to the charge. The deputation of a few of whom, under the command of a havildar, was all the assistance that the ryots obtained. In these days of breech-loaders, half a dozen Europeans would have been a match for twenty times the number of Chuars. Of course with the imperfect nature of the weapons of that day, it could not be expected that Europeans would fruitlessly rush into danger, but I should have expected that the European officers of the station would have, in some instances at least, courted and met an attack in person and repulsed their assailants. I wonder that no one European officer, civilian or military, with the exception of perhaps Lieutenant Gill, owned to that sensation of joyous excitement most young men feel now-a-days in field sports, or in any pursuit where there is an element of danger. I think most of us, had we lived in 1799, would have counted it better sport had we bagged a marauding Chuar, reeking with blood and spoils, than the largest bear that the Midnapore jungles can produce." The Mr. Imhoff who figures in this passage, we suppose must have been a son of the Baroness Imhoff whom Warren Hastings married and who, whatever her faults, was a woman of excellent parts and in some respects of fine character.

***

We learn from a note lately received from the settlement officer at Midnapore that an attempt was made as early as 1799 to naturalize the potatoe in Bengal but that from a maund of seed sown in that year at Midnapore, one maund twelve seers only were obtained owing, to the soil having been allowed to fall out of cultivation. Potatoes are rarely seen in Midnapore even now we believe, but the Collector thinks the crop might grow on high land.

***

The *Indian Church Gazette* says that a very strange graces follows the terminal dinners of Clement's Inn. After dinner is over, the members and guests rise on the removal of the white cloth; and before the president of the second table the butler put four loaves adhering to each other by their kissing crusts. Taking the mass of bread in his hand, the president slowly raises it above his head to the full reach of his arm, and after a pause brings it down with a thundering whack on the oak table. A second and third time it is done. Then before strangers have had time to recover from their astonishment, the president has thrown the bread, so that it slides spins down to the bottom of the long table, when it is caught up by the butler, who instantly runs out of the hall with it in his outstretched arms. The grace is wholly typical. The four loaves represent the four Gospels. The three elevations are in honor of the Blessed Trinity. The manner of casting the bread indicates the liberality with which the Bread of Life was given for mankind, the alacrity with which the butler leaves the hall, and the readiness with which zealous servants hasten to distibute the Bread of Spiritual Knowledge to those who hunger for it. The date of it is unknown, but it undoubtedly sprang from devout feeling and sentiment."

COLLEGES AND HIGH SCHOOLS, BENGAL.

The energies of Sir Richard Temple whatever adverse critics may say, are far from being exhausted in running up and down, and to and fro, in his province and his artistic efforts are we presume but the graceful relaxations of a mind usually occupied with problems of statesmanship. The education problem, among others, has been "carefully considered." In calling attention, some time ago, to his education policy, we remarked that he had not attempted to introduce any startling novelties but that, though observing the broad lines of policy previously marked out, he was no mere imitator. We were speaking at that time of primary education. We have now before us his minute on "High" Education, to use his own term, and the same remark is equally appropriate. He does not propose to revolutionize or to alter, in any respect, the nature of the high education that is now given, or the system pursued in giving it. But he proposes to make it, such as it is, more easily accessible to all his subjects, and at the same time to teach them the importance of self-help in their efforts to obtain it. These are in general terms—the two objects which he sets before him in the minute under consideration, and notwithstanding our doubts about the real worth of the higher education that is given in our Colleges, we are inclined to sympathize with the former object, as we do most heartily with the latter. We are not among those who seek to underrate Sir Richard's zeal in behalf of education. He is honestly anxious to diffuse its blessings, as equally as may be over the province, and the method he has adopted in so doing is unquestionably judicious.

We shall briefly indicate the nature and extent of the want he discerns, and the manner in which he proposes to supply it. Central and Eastern Bengal are well supplied with Colleges. Those at the Presidency, at Hooghly, and at Dacca are in need of nothing save an increased number of students in the higher classes. The Kishnagur and Berhampore Colleges were reduced to the rank of High Schools, but the restoration of the former is at present under consideration, and like measure will be meted out to Berhampore if the friends of the College can raise a certain amount of funds as has been done at Kishnagur. The present wants of Behar are satisfactorily supplied by the Patna College, and the want of a college which has been felt in Orissa is to be supplied by the conversion of the High School at Cuttack into a College, the proportion of funds required from private subscription having been already raised. It is in Northern Bengal, Chota Nagpore, and Chittagong that the want of Colleges is still deeply felt, and the proposals in the minute have reference to these localities. Sir Richard points out the importance of some of the districts of Northern Bengal, such as Rungpore and Dinagepore, and, seeing that the railway is about to bring civilization among the inhabitants, thinks it time that they were provided with high education to enable them to make use of their new advantages. Whether the conversion of a certain proportion of the people into B. A's is likely to help these localities much in the way indicated may be doubtful, but is apparently not so to Sir Richard, and here we are led to notice what is at once the strength and weakness of high education in this country. Why does His Honor conclude that a College education is necessary for these districts? Because "it is often difficult to find natives of this region sufficiently educated for the higher posts for which they would otherwise be eligible." This then is what is meant by enabling the people to make due use of the advantages of civilization—to educate a few of them up to such a standard as shall fit them to hold certain offices under Government. This is the aim of the high education which our Government provides, and Sir Richard proposes to extend in the interests of civilization. And here we say, lies the strength of high education among the natives of this country; for there will always be found students for a curriculum whose goal promises to be Government employment. And here also lies its weakness, for while such is the chief, if not the only, aim of the students, a power of passing certain examinations will be all they will seek at College. And experience has abundantly proved that such a power can be acquired without the true mental training which is ever the object of high education where it is not prostituted to unworthy aims. On this subject we shall probably have more to say. We proceed to observe that it is to meet the same deficiency that Sir Richard proposes to extend the blessings of higher education to Chota Nagpore. "Hardly ever has a native of that province passed the First Arts examination or taken a university degree, and it is notoriously difficult to find natives of that province sufficiently educated for the higher posts for

which they might otherwise be eligible." It sounds better—although the difference is perhaps only verbal—to hear that the inhabitants of Chittagong have themselves expressed to the Lieutenant-Governor a desire for increased facilities for obtaining a higher education, and to this desire Sir Richard now proposes to respond.

Let us now see the method he proposes to adopt, and with this we have no fault to find. In every case, Government will act only to supplement voluntary local effort. Where a zillah school is to be raised to the status of a High School, or a High School to the status of a College, a third of the expenses must first be provided or guaranteed from fees and voluntary contributions, and on this condition Government will supply the remaining two thirds—the necessary minimum of expenditure being fixed by the Lieutenant-Governor. With the proportion to be provided by Government in the experimental stage of the undertaking, we are not disposed to quarrel, though it is too great as a permanent grant-in-aid, and unless a gradual reduction be contemplated is surely inconsistent with the declared policy of the Indian Government. We are, however, pleased to see so decided an adoption of the principle that voluntary local effort is the prime essential in any undertaking to supply the higher education which is desired. In the manner which we have indicated it is proposed to raise the High School at Rajshahye to the position of a College, at an expenditure for two years of Rs. 13,000 and the zillah schools at Rungpore, Ranchee, and Chittagong to the position of High Schools at an expenditure for two years of Rs. 7,500 each. The total cost to Government for two years will thus be Rs. 23,500, or two thirds of the whole. If the object aimed at be merely to provide native officials for the Government in the several localities, it may perhaps he doubted if the game is worth the powder and shot, but if we may look upon the project as a step toward the attainment of the real object of higher education, the contemplated expenditure is certainly not extravagant.

We cannot however avoid expressing some regret that Sir Richard Temple should employ words, as he does in this minute, without any corresponding meaning, and so raise expectations at the commencement which are not met by anything in the sequel. "Much," he says, "as the Government of Bengal may be convinced of the need of extending and elevating primary education, it is equally convinced of the need of extending and *elevating* high education also. Much as high education may have established itself in Bengal it has not spread itself nearly enough. Superior as the high education may be to anything which existed in former times, *it is yet far from being high enough, and ought, if possible, to be rendered higher still.* The best informed Bengalees will probably admit that high education in Bengal, greatly as it may have advanced, needs much further progress both as regards *quality* and quantity." From these preliminary sentences we are justified in inferring that something more is contemplated by the Lieutenant-Governor than merely the desirability of extending high education, such as it now is, to those localities which are not properly provided with it. He insists upon the need of elevating as well as extending high education. The sentences are so carefully balanced, have about them such an air of calm statesmanlike deliberation, and are so explicit—almost indeed to redundancy—that even those who know how pliant a slave language is to Sir Richard Temple, may be excused for anticipating that the proposals which are to follow will refer to something more than simple extension. But they do not. We have given above the whole drift of the minute, which while it sets forth a good practical scheme for the extension of high education, makes not a single proposal for rendering it "higher still." After telling us, in a fine-sounding introduction, that high education "needs much further progress both as regards quality and quantity," we have certain proposals to increase the quantity, but not a hint about improving the quality. The sentences we have quoted are merely words, and not intended, so far as the sequel shows, to mean anything in particular. And this is a pity because the need which the practical part of the minute ignores is far more painfully apparent to all of us, than the need which it is proposed to supply. It may, or it may not, be desirable to increase the number of Colleges and, as a consequence, the number of University graduates. On this point opinion is divided, and there are many who think that Government has already done too much in this direction, and ought rather to bend its energies to the task of perfecting its system of primary education. At the same time it has become too evident that a multitude of graduates are being manufactured at our colleges at considerable expense who can in no true sense be called highly educated men. The superficial smattering of knowledge that is acquired for the mere purpose of passing certain examinations that are supposed to open the door to certain offices, is in no true sense high education. We alluded to this subject in a recent issue, while referring to a paper by a *Native* in the *Pioneer*, and it is unnecessary to enlarge upon it here. But we unhesitatingly say that it is more imperative that something should be done to improve the *quality* than to increase the quantity of the higher education. But for this we need more than an energetic administrator or an able writer of circumlocutionary minutes. A real statesman is needed, and even for a real statesman, the task would probably be a difficult one. We are by no means surprised that Sir Richard Temple should shrink from it, but then why does he raise our expectations by such an elaborate statement of a need for the supply of which he has not a single proposal to make? We are too forcibly reminded of the gigantic pictorial representations in front of a travelling menagerie which used to flatter our boyish eyes with the hope of seeing so many wonderful animals which, after we had entered, we searched for in vain. May we expect another minute to justify the introductory sentences of this one?

THE NEW ASSESSMENTS IN BOMBAY.

IT is a happy circumstance for the ryots of Bombay, that Mr. Pedder is acting Secretary in the Land Revenue department of the Presidency, at a time when so much uncertainty exists as to the prices of agricultural produce in the immediate future. The assessment which the land will bear, depends so largely upon the price of the common food staples of the country, that we have long felt and expressed our doubts of the wisdom of attempting to settle the rates for so long a period as 30 years. Thus the revised assessments in the Poonah Collectorate are not yet eight years old, while the local Government deems it necessary to reduce the rates so recently imposed from the fear that the estimate of the probable average of prices on which the rates were based, is likely to prove too high. It is not needful to recapitulate the considerations which led the Government to decide on the rates of assessment now in force. Suffice it to say that the Secretary of State, 1868, approved of them, in the following terms :—

> "No room is left to doubt that the new rates have been fixed at an amount fully justified by the improved circumstances of the district and even below that which the average prices of the last few years may have seemed to require."

Since the revised settlement was introduced however, and this despatch was received, prices have fallen greatly, and there seems to be strong probability that they will range lower than was anticipated when the rates were fixed. It is this uncertainty that invests the proposal to settle the land revenue in perpetuity with so fatal an aspect. Indeed we have long been of the conviction that even 30 years is far too long a term, and that the rates should be subject to re-adjustment every ten years, if not oftener. Having taken a somewhat prominent part in the discussion of this question, we think it right to say that we hail with satisfaction the action of the local Government in this matter, as there is no fear whatever of the interests of the State being sacrificed while they are in Mr. Pedder's keeping. What we would deprecate however, is the giving any pledge that these lowered rates are to last for 30 years. At this moment, there is every reason to believe that the fall in the value of silver will cause an important rise in prices within a few years throughout India, while other causes are at work to augment the rise. We object to these long leases, on the ground that they are dangerous both to the cultivator and to the State. Should prices fall heavily during the term, the ryot may be hopelessly impoverished before relief comes, while on the other hand should

they rise very materially, a term of 30 years gives a sort of prescriptive title to the cultivator to hold at the prevailing rates. We have pointed all this out over and over again, and the remedy. The leases should not be interfered with by any attempt at a re-survey, but the rates of assessment might be reviewed every seven or ten years, and lowered or raised by simple proclamation according to the course of prices. Under such a system, the leases might even be made perpetual without ruin to the State. The objection to so doing is that other causes will be sure to affect the value of land in a country only just beginning to shew progress like India, e g. notably from the improvement of communications therein. It is simply impatience of the natural course of things that demands permanence in any arrangements whatever concerning the land. The matter is in very safe hands in so far as Western India is concerned, and we should be glad to hear that Government had made a "perpetual settlement" of Mr. Pedder in the Revenue department of that Presidency.

A SUMPTUARY LAW FOR MARRIAGE EXPENSES.

A MOVEMENT appears to be on foot in Behar, for curtailing the extravagant expenditure at present attendant upon native marriages, and a deputation is said to have recently waited upon a high official in the district, soliciting his personal influence in behalf of the movement. The *Lucknow Witness* cannot see why it should be considered beyond the scope of Government to attempt something in the matter. "It has not refused to interfere with important socia "customs which sacrificed or imperilled life. And that inter- "ference has been attended with the best results. Why then "may it not interpose to prohibit or restrict a custom which "though it may leave life intact, with despotic force strips "existence of nearly all that makes it worth having, which "entails perpetual bankruptcy, wretchedness, and ruin. It is "largely owing to long oppression at the hands of its Govern- "ments that this people lack the stamina and independence "to carry out such reforms unaided. Can it be counted any "more than fair that Government should lend a hand to help "in a movement, whose triumph, we are persuaded, would be "welcomed by nearly all, and would be an enormous benefit "to the country."

May we suggest to the native press that this is eminently a question for them to determine; for although sumptuary laws have long been considered to be opposed to the principles of political economy, those principles assume the existence of a condition of things very different from that which prevails in India. We have frequently ridden these "principles" to death in our application of them, and it is not clear to ourselves that Government might not do something to deliver the people from the *thraldom in* which they are held, and the ruin in which they are involved, by a custom which it is impossible for the people to violate individually, without subjecting themselves to social ostracism. The failure of our own sumptuary laws was attributable to the fact that they were an attempt to fetter the discretion of the people, in matters in which they desired to be free. Mr. Froude has indeed suggested that the ancient sumptuary enactments of England were not meant to be enforced, but were issued rather as authoritative declarations of what wise and good men considered right. There is plainly a wide difference in principle, between taxing the wearing of silks, and skins, and furs, or attempting to regulate the dress of the ladies, as the Scottish Parliament once did to save the purses of the "puir gentleman their husbands and fathers;" and the attempt to subvert a tyrannous fashion under which the people *groan, and from which they would* fain be delivered. The attempt to put down luxury by legislative enactment is one thing: the effort to deliver a people from an expenditure they would gladly escape, another and very different thing. As every one knows, sumptuary laws abounded in ancient legislation, but we think it will be found that they were directed against wilful and voluntary extravagance, and were designed to repress a luxury of living that was held to be fatal to the spirit of a people. Thus at an early period of Roman history, the Censors to whom was entrusted the care of the public morals, punished with the *notatio censoria* all persons guilty of luxurious living, and as the love of luxury grew with foreign conquest and the increase of wealth, enactments were passed with the object of restraining it. Now it is against sumptuary laws of this nature, that political economy pronounces. Governmental interference to assist the people of India to free themselves from the intolerable burden which their marriage customs entail upon them, might be wise, as the Lucknow paper suggests. But such a question is eminently one for discussion and settlement in the native papers, and we recommend it therefore to their attention. It is they only, that can tell us how such an attempt on the part of the State would be received; and in particular the extent to which interference should go and the shape it might take. No people certainly ever were in a happier state in many respects than the people of India. The attitude of the Govern-, ment towards them is that of honest, patient waiting to be told what legislation they really desire. The Indian Government is in advance of the governed a long way, and is entitled on this ground alone, if on no other, to something like loyalty from them. Thus if they think a sumptuary law affecting marriage would be of help to them, and can show what it should be, and how it is likely to benefit them, they will get it as a matter of course; and it is of very few Governments that such praise can honestly be given. We have long been of opinion that a marriage tax would be a real advantage to the people, and Utopian as it may sound in the ears of some, we do not think we should despair, if we were in Sir William Miur's place, of lowering the tax on salt very materially by substituting for it a tax on marriage. One of the ablest of the Madras Native Judges (Mr. P. Sreenevasa Row) pointed out some years ago, the numerous recommendations there are in favor of such a tax, and the grounds for believing that a light tax of this order might be made to yield two millions sterling a year. A marriage tax, he wrote "in my humble opinion is the only (direct) tax suited to India. "It has not any of the disadvantages which a direct taxa- "tion is generally attended with; nor is it a novel tax. Al- "though no specific mention thereof is made in the Hindoo "codes, yet tradition tells us that the tax was paid by the "citizens cheerfully, and of their own accord to the heads of "villages, if not to their chief; and this story gains ground by "a similar practice obtaining in most of the villages, even to "this moment. And under the Mahomedan Government, Akbar "did actually levy the tax according to the rank of the parties "ranging from 10 Mohurs (150 Rupees) down to 1 Darham "(Ten Darhams make about 6 shillings and 8 pence sterling); "and it is said that it produced an enormous amount of revenue." We would once more commend the question to the attention of the native press. They need not mix up the fiscal question with that of a sumptuary law; but treat the two distinctly, if it seems to them better so to do.

COLONIZATION.
THE CENTRAL PROVINCES.

A SCHEME has lately been submitted to the Government of India by the Chief Commissioner of the Central Provinces for the colonization of a tract of waste land in those Provinces known as the Charwa jungle in the Hoshungabad District. We propose to examine it at some length, as if successful it would have a most important bearing on the welfare not only of the Central Provinces, but also of other thinly populated tracts of country in India, and would perhaps solve the grave question of the increasing pressure of population on the soil in the Gangetic valley.

Until it was proved by the last census, that the population of Lower Bengal had been vastly under-estimated; that a district believed to contain 1,47,000 persons, in reality had a population of over a million; and another district supposed to contain less than a quarter of a million a population of nearly 1½ millions—Oudh was generally believed to be the most densely populated province in India. But Oudh, a comparatively small and long inhabited territory, was held to be blessed with a soil so fertile, a peasantry so industrious, and a land

holding class so wealthy, as to justify no apprehensions for its future well being as the Garden of India. The scarcity in Behar and the adjacent districts of Oudh and the North-West, combined with the revelations of the census papers, and the recollection of the Orissa famine, dispelled this view, and the desirableness of various emigration schemes was rapidly canvassed. Emigration to the Sychelles, Mauritius, Reunion, &c., had heen tried with moderate success for several years, and statistics were furnished to show the prosperity of the emigrants, and the fostering care with which a paternal Government regarded the coolie. Burmah was willing to receive thousands, and a protector of emigrants was ready to consider their welfare the sole aim of his existence. Assam, with its developing cultivation of tea, offered comparative wealth to the emigrant, and pledged itself to punish with imprisonment the planter who assaulted the labourer while the coffee planters of Coorg and Wynaad were ready to receive him with open arms. But all these schemes for one reason or another failed to attain the proportions anticipated by their promoters. A small but steady flow of emigration no doubt reaches the Mauritius, but the wondrous tale of Ram Bux's sugar mill and wealth in dollars has failed to induce Ram Bux's countrymen to set sail for the promised land. In Burmah the emigrants expected too much. They considered that a paternal Government should feed them, but demurred to being called upon to work, and are now better known as inmates of the jails than as workmen. In Assam, in spite of rules innumerable, and the presence in every Bengal district of touts and recruiting agents, coolies are still at a premium, and as for the Wynaad the scheme was but the effervescence of some well meaning but inconsiderate "Sabha." The causes of these failures are not far to seek. The ryot dreads a long land and sea journey, and expatriation from his home. The advantages offered were by no means extraordinary, and the toil to be undergone in a foreign land by no means light. Unless therefore Government could have guaranteed advantages, which it could not with any reasonable regard to expenditure, failure was inevitable. Enterprise is a plant of slow growth in India, and when all the difficulties are considered, it is not surprising that the Oudh and Behar ryot preferred to remain at home. As regards Oudh and the North-West Provinces moreover, these schemes failed to take into account the immense but thinly populated tracts of country that were next door to the intending emigrants at home. It was forgotten that as in order to its development, Assam had been separated from the unwieldly mass of Lower Bengal, so part of the diversified territories now comprised in the Central Provinces had about thirteen years ago been separated from the North-West and Bengal, and with the Nagpore Province had been brought into one homogeneous whole, with an especial view to a development which though steady has not been by any means so rapid as was expected.

It has been reserved for the Chief Commissioner of the Central Provinces to propound a scheme which from its moderation gives ground for believing in its ultimate success; and which, though comparatively inexpensive, is intended to form a nucleus which may spread far and wide over the Central Provinces, and afford the solution of a most difficult problem. Such a scheme deserves careful consideration, and if while admitting its undoubted merits it is found to be impracticable, it must still be regarded as a step forward and as such deserving of commendation. Summarising the articles on the subject in the *Pioneer*, it is remarked that the Central Provinces with great mineral wealth and every species of forest produce are wanting in men, there being only 81 persons to the square mile, whereas there are 389 in Lower Bengal, and 361 in the N.-W. P. There are in the Central Provinces hundreds of square miles of country lying waste, which by a year's clearing and cultivation might be converted into broad fields of wheat. The remains of wells and tanks, and the ruins of villages and even cities point to the former prosperity of tracts of country, which the ravages of the Pindaries have turned into a stricken wilderness. To bring one of these tracts again under cultivation it is proposed to found a colony consisting of 10 villages of fifty families each in the Charwa jungle of the Hoshungabad district; and a sum of one lakh of rupees or Rs. 200 for each family is to be set aside to carry out the project. As a number of strangers collected at random would have little in common, it is proposed to induce some members of the land holding classes, or of the old dispossessed land holding classes to head the emigration, and bring with them as many cultivators as are willing to follow their fortunes, and take up land in another province. It is proposed that the colonists should be Kooknees, Jats, or Aheers from the trans-Gangetic tracts north and east of Allahabad, and their leaders are to become in time the village managers on the part of Government, and to receive free of rent for ever a portion of the land brought by them under cultivation.

The adoption of the present scheme would be but a first step. Not only however is the first of the greatest importance, but the establishment of the colony would, it is thought, be likely to lead to important results. Such a colony, it is believed, would become the nucleus and centre of attraction to which many other emigrants from the N.-W. P. and Oudh might be drawn, and from which such subsequent extension might take place as would dwarf into insignificance the initial cost ef its establishment. The leading principles in framing the proposed measure are these:—

(1.) The Colony should be large,

(2.) The Colonists should be men of the industrious cultivating classes.

(3.) The Colony should be near the Railway.

(4.) The advantages offered should make it thoroughly worth the while of the colonists to come.

The difficulties to be encountered are:—

(1.) The difficulty of securing emigrants of the right kind.

(2.) The difficulty of selecting a suitable locality; and (3) the danger that the colonists would lose heart and desert, when after a reasonable period, a demand was made upon them, for the rent of the land they have cleared.

Before proceeding to remark on the scheme founded on these principles it is necessary however to explode the idea that there are only 81 persons to the square mile in the Provinces

Statistics unless carefully examined are fruitful sources of error, and seldom more so than in instances like the present. The conclusion drawn *from these figures is* that the provinces are miserably under-populated, whereas in reality the population is by no means scanty. In the first place to obtain this average 15 feudatory states having an area of 29,112,* square miles and a population of 36 persons to the square mile have been included. The area of these States Bustar, Karond and others, should no more be included in the average population of the Provinces, than the areas of Puttiala, Bhootan, or Kattywar in calculating the average population of the Punjab, Lower Bengal, or the Bombay Presidency. Now excluding the area of these States, the Central Provinces average 96 persons to the square mile.

A still larger deduction requires to be made for the area of 34,113† square miles which represents the unculturable waste lands There then remain but 22,951 miles of cultivated land and 27,807 of culturable waste, or in all 50,758 ‡ square miles that can reasonably be taken into account; and on this area are placed 8,200,000 persons, or 260 persons to the square mile. The population is still not very dense, but it is almost double the figure mentioned in the *Pioneer*; and taking into consideration the comparatively small area of unculturable waste in Bengal, the N.-W. P. and Oudh and the comparatively recent development of the Central Provinces as compared therewith, 260 persons to the square mile will not appear so exceedingly scanty a population. The argument can however be applied with even greater cogency in the case of the districts of the Nerbudda Valley the site of the proposed colony. The Nerbudda valley may

*Administration Report of the C. P. for 1873-74.

† The Census report, 1872, makes this area over 39,000, square miles inclusive of State Forests.

‡ The portion of the Upper Godavery District, transferred to the Madras Presidency on 1st April last, has not been taken into account as its area is not known.

be considered to comprise part of the Jabalpore district, the Narsingpore and Hoshangabad districts, and perhaps a small portion of Nimar. The area of the Jabulpur Tehsil (which may be held to represent that portion of the district, in the Nerbudda Valley) is 1,546 square miles ; of the Narsingpore District 1,916 square miles, and of the Hosangabad District 4,222 square miles, and the population 267,785 ; 339,395 ; and 440,186 persons respectively. The total unculturable area (including forests) of each is as follows. :—

Jabulpore tehsil	548	square miles.
Narsingpore district	733	,,
Hoshangabad district	1979	,,

Now, deducting these areas, we have a population of 268, and 286, and 196, per culturable and cultivated square mile. Now it is not argued that this is a dense population, but the corrected figures show the danger of accepting such statistics as have been put forward as an index of the scantiness of the population. We shall pursue the subject in our next issue.

HOSTELS FOR STUDENTS.

WE learn from a recent minute of Sir Richard Temple's that he contemplates the establishment of "hostels" or lodging-houses for students, in connection with Government schools and Colleges. It is proposed that they shall be under the charge of native masters chosen or approved of by the School or College authorities, and that the said authorities shall exercise some kind of general supervision over them. Students from a distance cannot easily obtain lodgings to their own and their parents' satisfaction. If they have no friend or relatives on the spot, "they sometimes "lodge miserably. As they live according to their own pleasure, they "are exposed to temptation ; and if they fall into habits alike in- "jurious to their morals and their studies, there is hardly any "room for surprise." It is to remove these evils, the existence of which is notorious, that Sir Richard Temple proposes to establish authorized lodgings. The proposal seems at first sight an exceedingly commendable one.

But on consideration, it seems doubtful whether it would accomplish its object, and whether the object is one, for which it is within the province of Government to provide funds. One object, but not the chief one, is to lodge the students with greater comfort. On this we need not remark, as it is professedly not for this object that Government money is to be granted. The parents or guardians are to defray all charges, except a portion of the cost of supervising the establishments. But the power of exercising some kind of control over the habits of the students, is that which is chiefly desired, and the Minute proposes to pay a capitation grant to the keepers of the houses as "cost of supervision." The nature and extent of this supervision are not clearly defined. The best account we can give of it after a study of Sir Richard's rather misty minute, is that it is supposed to be worth from four to eight annas a head per mensem to the Government. There are to be two classes of lodging houses ; in the one the students are to be fed as well as lodged, and the master in charge will act as temporary guardian of the students under his care. In the other they will pay for lodgings only, and will find their own food : but a mere general supervision will be exercised over them, amounting apparently to nothing further than the expulsion of those who seriously misbehave. Now it seems to us that in houses of the first class, where parents are to pay for board and lodging, and of their own choice to commit their sons to the guardianship of the master, the remuneration ought to be sufficient to repay the master for all his trouble, and we cannot see why Government should step in with a capitation grant for cost of supervision or of anything else. It would be for his own interest to keep a respectable house without being paid by the Government, and if his own principles and considerations of self-interest, were insufficient to make him do so, we fail to see that a capitation grant of four annas could much improve matters.

In houses of the other class, which are to be simply rows of thatched huts where nothing but lodging and "supervision" are to be provided, if the parents of the students are to pay sufficiently for the lodging, and the supervision is to be limited to the expulsion of notorious offenders, we hardly see that there is anything that Government need pay for, unless, perhaps, the "cost of supervision" is to be paid to the lodging-house keepers for allowing themselves to be supervised. For we read that the principals of the colleges, the head masters of the school, and the district committees would be expected to exercise a general supervision, so as to make the hostels or lodging-houses as worthy as possible of the confidence of the students, and of their parents or guardians." In that case, a capitation grant is to be paid to one set of Government officials for allowing another set of Government officials to exercise a nominal supervision over them, in the performance of an extra-official duty which is supposed to be in itself remunerative. Now experience proves that such supervision as is here indicated is every purely nominal ; the same might indeed impose upon parents and guardians and attract more lodgers, but would we are convinced have no other effect. The question is, should public money be paid for a censorship of morals, and especially for one of so ineffective a nature as this would be. It is professedly to effect a moral improvement that the money is to be expended. We do not believe that the massing together of students in "hostels" has ever effected, or will ever effect, such improvement, and we fail to see that the kind of supervision to be provided in this scheme will be anything more than a name. Such a proposal sounds well doubtless, but if a careful perusal of the minute shews that there is no other clear purpose discernible in the scheme, and that it can effect no other than to make our schools and colleges more popular among the natives and perhaps attract a greater number of students. It would be better to say so distinctly, and not to profess that we are expending money to set up chimerical moral safeguards. We believe we have given as clear and correct an interpretation of the minute as it is capable of bearing, but it is very mistifying from beginning to end. We could understand a proposal to provide students with cheaper or better lodgings, and might sympathise with the expression of a hope that their close connection with the college would have a good effect on the habits of the students, though we should still object to doing so out of the public funds ; but this minute proposes to provide the other things but to pay only for the moral gain. After this who shall charge the Government with neglecting the moral tone of the students of our colleges ?

THE LATE SIR EDWARD RYAN.

FEW if any of our readers will remember Sir Edward Ryan as Chief Justice in Calcutta, but many will have friendly recollections of him as Chief Civil Service Commissioner before whom they had to appear on their entrance to the public service. The *Times* of 25th August, in an obituary notice which we append, does no more than justice to his memory. We merely add that he married very early in life Louisa, a daughter of William Whitmore Esq. of Dudmaston near Bridgenorth in Shropshire, and had a numerous family. Of the College friends mentioned in the *Times*, he was the last survivor. He and Babbage made their appearance at Cambridge the same day, and sat next to each other : they afterward married sisters and remained friends through life :

"Sir Edward Ryan expired, after a short illness, on Sunday night at Dover, whither he had just gone for his usual vacation. Born in 1793, his career from first to last was one of devotion to enlightenment and progress. Having taken his degree in 1814, at Trinity College, Cambridge, where he was the friend of Herschell, Babbage, Maule, Romilly, and Sedgwick, he was called to the Bar at Lincoln's Inn in 1871, and after pursuing the profession with great success for several years, was, in 1826, appointed Puisne Judge of the Supreme Court of Calcutta, and promoted in 1833 to the Chief Justiceship of that Presidency. Of his career in India it is enough to say that he discharged the office with great ability ; while as to the mark which his genial nature left on society in Calcutta, many a retired Civil Servant can testify to that pleasant and hospitable house in Garden Reach which was ever open to welcome old friends and new faces on their arrival from England. Nor let us forget to mention the repeated notices of Sir Edward Ryan which are to be found in Miss Eden's "Letters," which prove that the genial Chief Justice was the life and soul of society in Calcutta. He had received the honour of knighthood on his elevation to the Bench, and held the Chief Justiceship till January 1843, when he resigned his appointment and returned to England. Immediately after his arrival he was sworn in a Privy Councillor, in order that the country might have the benefit of his experience in Indian Appeals to the Judicial Committee of the Privy Council—a duty which he continued to discharge for many years. Nor was this duty the only one which was laid upon him. In 1846, he was appointed a Railway Commissioner, in conjunction with the late Lord Dalhousie ; while in 1851, he was appointed Assistant Controller of the Exchequer, an office which he held till he resigned it in 1862.

"These duties and offices, arduous and honourable as they were, might well have been deemed sufficient to fill up the life of any man ; but the career of Sir Edward Ryan was not yet complete.

THE WEEK.

THE main incident of the week has been the Meeting of the Justices on Wednesday, for the election of a new Vice-Chairman, and the extraordinary proceedings of Mr. Hogg thereat are the talk of the hour. Should the Lieutenant Governor persist in upholding the Commissioner, there is but one course left to the Justices, consistent with their self-respect—to resign in a body. Mr. Hogg has succeeded in raising a feeling of intense indignation throughout all classes against his administration. The *Indian Mirror* is but faithfully reflecting that feeling when it says, that the proceedings of Wednesday disclose so scandalous a state of things that no time should be lost in convening a public meeting of the rate-payers to adopt a memorial to the Government for the remodelling of the whole municipal system. "Mr. Hogg has shown himself wholly unworthy of the office he holds, and the ratepayers can no longer have confidence in him as the Chairman of the Municipality.' As a correspondent in one of the morning papers points out, there were in support of the appointment of Mr. Roberts not only the votes of the great majority of the Justices whose opinion is of any real worth, but a spontaneous representation in his favor signed by almost every leading non-official Englishman in Calcutta, certainly by the most prominent and influential of them. If then, in the government of the Municipality, public opinion is ever to have any weight at all, it was now when it had spoken in a manner it had never done before, and with a force and unanimity which it was impossible to disregard. Mr. Hogg's first nominee having failed him, he ventured to bring forward a man of whom and of whose antecedents he admitted that he knew nothing; and did his best to get him elected, and was very nearly succeeding. "I appeal" adds the writer, "to the independent Justices as a body "to tender their resignation of a position which it is impossible "that they can retain with self-respect." There is nothing else left for them. They should call a public meeting of the ratepayers, to memoralize the Government for Mr. Hogg's removal, and if the Government refuse to remove him, resign in a body. The *Indian Daily News* hints that this course will be taken, and we are very glad to hear it.

THE alarm that was being expressed at the Russian advance appears to be giving way to a more reasonable feeling; and if the government of the country instead of ministering thereto by its own fussy action beyond the frontier, would but disdainfully ignore the neighbourhood of Russia as any menace to ourselves, the disquieting rumours arising therefrom in the bazaars of India, would die out of themselves in the course of time. It is the Government and the press that are the propagators of the mischievous belief, that an opportunity will one day come for subverting the British Raj, by the help of a Russian army. Were the doubtful morality of our present relations with the native States of India but to give place to a clear, and well defined, and honest policy towards them, we should have nothing to fear from the neighborhood of Russia. But while we deem it safe to alienate from our rule the sympathies of men like Dinkur Rao and Salar Jung, it is vain to suppose that there will be no disaffection in the bazaars. According to the latest telegrams, General Kaufmann has occupied Khokand, the permanent occupation of which is considered likely in St. Petersburgh, but it is thought to be more probable that Russia will retire after placing Khan Sade on the throne, and content herself with maintaining a strong outpost at Khodjend. Neither at Khodjend, says a contemporary "nor on the Atrek, is the Russian position a very strong one; and advancing as she is in parallel lines eastwards, Russia sees the folly of pushing her northern parallel so far as Khokand, while the Southern one lingers so far behind as Merv. In a few days, we ought to hear that Khan Sada has been placed on the throne vacated by Khan Khudayar, and that Kaufmann has fallen back upon Khodjend."

ANOTHER revolution has occurred at Muscat, concerning the true nature of which the *Englishman* gives probably a more correct account than the Bombay press. Since the death of Azan bin Ghez and the defeat of the extreme fanatical party, Sayed Turki has ruled in Muscat with general acceptance amongst the people of Oman. But of late the natural force of the once dashing Imam is said to have abated; or the puritanic sects may have coalesced to uphold the strict tenets of the Koran against their somewhat Gallio-like ruler. There seems ground for this latter supposition, in the welcome accorded to the Imam elect, Abd-ul-Aziz, who has of late affected a leaning towards orthodox Mahomedanism. It is about two years since he took upon him the character of a Sayad. He is a son of the venerable Sultan of Zanziber Sayad Said, who died in 1858; and is half brother, to Sayad Turki, who has now voluntarily resigned the *musnud* in his favor. The fine personal appearance of Abd-ul-Aziz, which we hear spoken of, is attributed to his Circassian mother. The new ruler thus enjoys the advantage that accrues to the Mussalman race from free selection in their matrimonial arrangements. Lady Mayo pronounced Sayad Turki himself, according to our contemporary, the finest-looking man she had seen in the East. We think there must be some mistake in this. WE saw the Sayad, if we remember rightly, in Bombay in 1869, and he was anything but a fine-looking man at that time. We thought him decidedly ill-looking.

VENICE has been finally fixed upon as the port at which the Prince of Wales will embark for India. The *Serapis*, is ordered to be at Venice on October 16, and the departure will take place the same day. The stay at Suez and Aden will be brief. At the last named port, the flying squadron under the command of Sir Rowley Lambert, C. B., will meet the *Serapis*, and act as its convoy to Bombay.

THE *Pioneer* appears to have written to Mr. R. G. Melvill, suggesting that he should furnish the public with an explanation of the considerations which had induced him to embrace the Mahomedan faith. In reply, the journal has received the following very painful letter:—

"The only reply I can give to yours of the 16th instant is that I never really adopted the Mahomedan faith. The only explanation of my having for a short time professed the faith appears to be that a 3-years' residence at Sirsa had so far acted on my brain that I was ready to do anything for the sake of a little excitement, without reflecting on the consequences. Those who have seen Sirsa will have no difficulty in crediting this. Of course, I soon repented of my folly, and have long since ceased to profess a faith in which I never believed; but I was hurried out of the service without a chance of retracing my steps. I should be glad to have it generally known that I am a Christian and not a Mahomedan."

HOWEVER much we may have opposed the aggressiveness of the Du ch in Sumatra, we cannot but admire the energy and pluck which is now being displayed by the Netherlanders at Achin. Repeated repulses have now given way to frequent successes, while the malarious atmosphere of the country is gradua ly becoming purified under the unceasing efforts of the Dutch doctors to overcome natural as well as physical obstacles. The latest news by this week's mail, informs us that another successful assault has been made on one of the most determined Cantons. This has inspirited the troops. The construction of the railroad between Kotta Rajah and Oleh-leh the landing place, is at present vigorously proceeded with: every one will understand that good communications, between the landing place and the principal settlement is and continues to be a chief requirement. The Achin history, so long full of sorrowful and sombre scenes, begins to assume a more rose-coloured aspect, and we hope that soon matters will be in a more satisfactory condition. According to advices from the seat of war, a patrol from Kotta Alam has succeeded in capturing three or four of the enemy's forts which were weakly garrisoned and badly defended. After having partially destroyed these hostile fortifications, the troops retired, because extension of our positions in that quarter is not at present intended by the Commanding Officer there. In many places in Netherlands India, cholera has appeared frequently in a sporadic form: this has also been the case at Batavia; and as as it seems to be impossible to check the sale of unripe fruit, damaged meat, and spoiled fish, all of them injurious to health and favouring cholera, the victims are much more numerous than would have been the case had more care been taken.

MONEY MARKET.

FRIDAY, 24TH SEPTEMBER.

THE effects of the great falling-off in the public demand on the Presidency Bank, which gave an easier tone to the value of money last week, have gradually worn off, and the event has proved that it was not without foresight the Bank maintained its rates, in face of so serious a contraction of its business. Although the Government balances have this week been fully maintained in amount, notwithstanding the large withdrawals for up-country and for Bombay, the public demand has increased to a moderate extent, but quite sufficient to strengthen the Bank in its scale of charges; and from now up to the holidays there must almost of necessity, be a continuance of that demand of sufficient importance to maintain the

value of money at its present level ; and after the poojahs are over shipments of silver to India having for the present ceased, trade requirements will likely be large enough to employ all the capital available on at least present terms. During the past week some gold has come in, but the amount is quite insignificant as an influence on the money market. One point of the pressure on the Bank shows very little sign of abating, the advances against Government paper : and as such securities stand just now at a much lower range than has of late years been considered their normal value, it is probable that borrowing on them will be continued, either until a rise in prices takes place, or until it is conceded that their value has been overestimated. And in a market for them, such as has been lately witnessed, almost entirely devoid of speculation, even the small portion of this year's loan, which has yet to be taken up, can scarcely fail to keep prices of stock low for the remainder of the year. At the same time, taking everything visible into account, the probabilities seem to point to a continuance of something like comparatively moderate rates for money, and there is at present nothing to lead to fears of stringency.

During the past week there have been steady withdrawals of money from the Bank of England, and the bullion by yesterday's return had decreased to 27½ millions, the cause being doubtless a demand for wheat. The rate for discount of six months' bills had advanced to 3 per cent., but the Bank's minimum remains at 2 per cent.

The Import market here has decidedly improved during the past week, and a deal of the lee way in sales has been made up. Light weight shirtings, from 6 up to even 8 ¼lb. shirtings having been chiefly touched by the demand, stocks of them having been greatly cleared out at 2 to 3 annas advance from the lowest point. This too has been in face of a declining market in Manchester, and no great falling off as yet in outward shipments, so that it may be said with truth that a healthy business may now be looked forward to.

There has been a very considerable export business arranged for, the leading articles being Jute, Tea, and Seeds, but home accounts are not over favorable for any of them. The last named article is indeed declining, and although the others are steady it seems doubtful if shippers will do much more than get back their own money. There has been a strong demand for freight, and rates are about 5 shillings a ton higher. All the available shipping here is engaged fully up to the end of the poojahs, and vessels have been engaged to come round from other Eastern ports to take cargo. Estimates of the Indigo crop are being put rather lower, and from 112,000 to 115,000 maunds is now thought to be about the mark.

The Exchange Banks are dilatory this half-year in issuing their reports ;—the only dividend yet declared is that of the National at rate of 5 per cent per annum *ad interim*, but it is known that their profits have been largely in excess of this, and that with commendable prudence, they have kept in hand a large sum, larger it is believed than they have divided ; but it will not be known positively how much, until the issue of their report a fortnight hence.

The course of Sterling Exchange has been steady, and a very large amount of selling business has been done by the Banks, for completion up to the middle, and even up to the end of next month, at 1-10-1-16. to 1-10⅛. for six months' sight, and at 1-9¾. for telegraphic transfer. The last named rate has weakened since prospects of dearer money at home set in, and 1*s.* 9-11-16*d.* may be now quoted as the working price. Private buyers have been taking credits moderately at 1*s.* 10·3-16*d.* and sellers are now trying to do business at 1*s.* 10⅛*d.* ; but the Banks buying rates have been steadily 1*s.* 10·5-16*d.* for discountable paper, and 1*s.* 10⅜*d.* for bills with documents deliverable on payment. Present quotations may be fairly put as under :—

Bank Bills	1*s.* 10 1-16*d.* to ⅛	6 months' sight.
Credit Bills	1*s.* 10 3-16*d.*	
Document Bills	1*s.* 10⅜*d.*	

The market for Government paper has been heavy throughout, with a disposition to sell, A good amount of business has been done at from last week's quotations down to the present, but in five and a half per cents, it must be remarked that sellers have not yet given in to the lowest quotation, though it is impracticable to sell in value, at the highest, Rates may thus be fairly quoted a under :—

4 per cents,	101⅞
4½ per cents,	102⅞
5½ per cents,	108⅛ to ¼

The market for shares must be described as even more depressed than before, and sellers have decidedly predominated, Tea scrip is the worst of all, but this is perhaps capable of explanation on temporary grounds, namely the necessity of selling forced on some holders by the approach of the holidays. These having been for so long the favorite investment, a very dull market tells on them with all the greater force. Spinning Mill stocks, having had their evil days early in the year, have been comparatively steady. India General Steam were rising fairly, but reports of the loss of another steamer have produced a fresh and serious depression. There has been an increased amount of business done during the week, but the subjoined memorandum of the principal sales will show that there has been nothing like an improvement in the market. A large business has been done in the shares of the new Sugar and Rum Company, Carew and Company, and their price, almost an exception, has been very firm. The sales chiefly worth quoting have run in this way :

Bank of Bengal, 1,420, 17½, 20, 17½ 1,420
National Bank, 117, ½, 18, 16½, 16, 17, 114.
India General Steam, 410, 15, 10, 365, 360.
Barnagore Mills, 98.
Howrah Mills, 73, 2, 3, 2½, 72.
Oriental Mills, 70.
Calcutta Mills, 107, 8, ½, 9, 108.
Fort Gloster Mills, 79, 80.
Seebpore Mills, 79, 8½, 79.
Budge Budge Mills, 2 discount.
Carew and Co., 9 premium.
Bengal Tea, 98.
Durrung Tea, 75.
Bisnauth Tea, 58 premium for contributories.
Central Cachar Tea, 148, 40, 41, 141½.
Singell Tea, 98, 97.
Dehing Tea, 25 discount.
Punkabaree Tea, 90.

The English Mail of 3rd September was delivered here this morning.

LATEST TELEGRAPHIC NEWS.

London, 16th September.

THE wheat crop of France is estimated at 96,600,000 hectolitres and there will be a surplus of 10,000,000.

The American Agricultural Bureau reports the condition of the cotton crop this month as better in Mississippi, Louisiana, and Arkansas, but worse on the Atlantic Coast, Alabama and Texas. The only States however which reports a lower condition than 1874, are South Carolina, Georgia and Florida.

London 17th September.

OBITUARY.—Major Farquharson of the 42nd Highlanders.

London, 20th September.

THE Bullion in the Bank of Prussia is reduced to £24,000,000 owing to the withdrawal of notes under 100 marks.

Paris, 17th September.

AN interview has taken place between M. Thiers and Prince Gortschakoff at Vevey. The latter feared that the French Government would be carried away by clerical reaction. Regarding the Eastern question, he said its solution was momentarily adjourned ; but that he could, nevertheless foresee the autonomy of Bosnia and Herzegovina, and the rectification of the Montenegrin Frontier with a port on the Adriatic.

Berlin, 18th September,

THE Emperor of Germany leaves Baden for Italy on the 1st October 1875.

Madrid, 21st September.

800 Carlists have entered France disarmed.

Madrid. 23rd September.

THE Vatican has requested the SpanishGovernment to execute the Concordat of 1851. The Government have resisted the application. The Papal Nuncio here has issued an intolerant circular to the Spanish Bishops.

St. Petersburgh, 21st September.

ACCORDING to advice from Khokand, General Kaufmann has had an interview with Khan Sade, who has agreed to comply with all the wishes of Russia, nevertheless Russian occupation of Khokand is not improbable.

St. Petersburgh, 22nd September.

GENERAL KAUFMANN occupied Khokand on the 16th September without resistance and released Russian prisoners. Khan Sade has accepted conditions of peace.

New York, 17th September.

A SEVERE storm at Galveston in Texas has partially submerged the town, demolishing several bridges and causing loss of many lives.

New York, 21st September.

DISASTROUS floods and storms by which several settlements have been swept away have visited Coast of Texas. The town of Indianola has been destroyed and 150 persons are reported to have perished.

Belgrade, 20th September.

THE Servian Parliament at Secret Sitting have adopted by 71 against 44 votes an address merely paraphrasing the speech from the throne.

LIST OF PASSENGERS.

ARRIVALS.

The P. and O. Co.'s S.S. *Hindostan*, Commander N. Roskell, arrived at Bombay with the following passengers :—

From Southamton.—Col. R. and Mrs. Johnstone, Mr. and Mrs. Thomson, infant and child, Mrs. Douglas and 2 infants, Capt C. J. A. Yates, Miss C. Kingsford, Mr. J. Bryan, Mr. and Mrs. P. Peterson, infant and European female servant, Mr. C. J. Tarrachund, Mr. A. Dunjeebhoy, Mr. N. J. Guzder, Lt Col. A. R. E. Hutchinson, Mr. J. Gibbins, Mr. G. Cahill, Mrs. Woolcombe's man-servant, Mr. R. Oliphant, Mr. and Mrs. Ponsonby, Mr. B. Winepenny, Mr. J. W. Thomas, Mr. J. Cheetham, and Mrs. M. C. Cohen.

From Venice.—Col. Finch, Lt. J. Carruthers, Mr. C. W. Chisholm, Mr. W. F. Minus, and Mr. Dinshaw Nowrojee.

From Brindisi.—Mr. C. Robertson, Mr. P. S. Carnegie, and Mr. Justice Kindersley.

From Suez.—Lt. H. N. Sawyer, and Mr. A. Angolke.

From Aden.—Capt. Bulkley, Mrs. Bulkey, 2 children and 2 infants, Dr. Thacker, Mr. Dhunjishaw, 19 natives, and Mrs. Dumely's native servant.

DEPARTURES.

The P. and O. Co's S.S. *Mongolia*, Captain A. Coleman, left Bombay with the following passengers :—

For Southampton—Mr. P. Robertson, Mrs. Lennox, and European female servant, Mrs. Pitcher, Mr. George Fawcett, Col. G. S. Morris, Mr. and Mrs. Maclaren.

For Brindisi—Mr. Startling, and Mr. J. Turton.

For Gibraltar—Mr. J. Pereira, child and infant.

For Venice—Major Chambers, and Mr. Fraser.

For Malta Revd J. Kidd, Mrs., Miss Kidd, and native female servant.

The following is a list of passengers per S.S. *Madura*, which left Calcutta on the 18th instant for Rangoon, Moulmein, and the Straits — Lieutenant Colonel C. M. Mercer, Mr. Maciver, and Baboo Guzadhur Lall. Second Class—Criminal Lunatic John Ryan and one European Constable.

The The following is a list of passengers per S.S. *Maharatta*, which left Calcutta on the 18th instant for Chittagong, Akyab, and Kyouk Phyoo—Mr. C. W. Bordwine Thompson, Mr. J. Clark, Mr. E. M. Showers, Mrs. J. Ballantyne and four children. Second Class—Mrs. Munsie.

About the year 1850, the question of filling the junior offices in the Civil Service by competition rather than patronage began to be discussed, the chief promoter of the plan of recruiting those officials by merit rather than favour being Sir Charles Trevelyan. The result of this discussion was the establishment of the Civil Service Commission, upon the duties of which and the controversies which arose out of it Sir Edward Ryan entered with a freshness and energy which showed that long service had only mellowed without in the least impairing his capacity for official work.

"Sir E. Ryan was a member of the first Board of Civil Service Commissioners appointed by the Order in Council of the 21st of May 1855, the other members being Sir J. Lefevre and Mr. E. Romilly. The Commission was unpaid until April 1862, when Sir E. Ryan, as First Commissioner, received salary; having previously, as we have already stated, resigned the offices of Assistant Controller of the Exchequer and member of the Judicial committee of the Privy Council. His unpaid colleagues at this time were Sir E. Head and Mr. Twisleton. Under Sir E. Ryan's presidency the scope of the Commission was gradually enlarged from year to year, the mere test examination of nominees for Civil appointments prescribed by the original order in Council, being succeeded by limited competition, as recommended by Lord Derby's Committee of 1860, and that being followed by open competition, as established by the Order in Council of June 1870. In addition, the Commissioners have conducted since 1858 the examinations for the Civil Service of India and for some years past those for admission to the Army. To such proportions has the Civil Service Commission grown since its establishment in 1855. During the whole of that time Sir Edward Ryan, assisted by successive colleagues, has been its guiding spirit, displaying in the transaction of its business a tact aad sagacity rarely, if ever, surpassed in the public service. Indefatigable and energetic to the last, he may be truly said to have died in harness and to have only ceased from his labours with his latest breath. His kindly face and stately figure will long be missed in London society, and not least of all by that University of London of which he was Vice-Chancellor, and whose interests he incessantly watched over both before and after the decease of his dear friend Grote." The *Mofussilite* says:—"Sir Edward Ryan's name takes us back to a dark period of Indian history, when men's minds were wrought to fever heat of excitement by the appalling disaster which befel our army in that dreary passage through the Cabul gate, whence only one remained to reach the goal at Jellalabad. Among those who administered the sweets of consolation to the troubled mind of the Governor-General as he paced up and down the terrace of Government House, it was Sir Edward's genial face and gentle nature which spoke comfort to Lord Auckland far more than any others who approached that noblemen in the hour of his country's humiliation, which was charged to his account.

ATHANASE COQUEREL.

THE liberal Protestants of France and indeed of the whole Continent of Europe have suffered a great loss by the death of M. Athenase Coquerel. Fierce theological warfare has for some time raged in the Protestant Churches of France and Switzerland. In both countries, the two opposing parties may be similarly described. On the one hand, there are orthodox Evangelicals, who are willing to be tied and bound in the chains of their orthodoxy. On the other hand, there are free thinking Liberals, who resist all attempts to induce them to share the fetters of their brethren, and are equally unwilling to forge any enduring fetters of creed and dogma for themselves. Englishmen, who are far removed from sympathy with the particular views now prominent amongst the liberal Protestants, or with their attitude of critical antagonism towards many of the accepted doctrines of the Churches of Christendom, look upon the Liberals nevertheless as occupying a sounder position than those to whom they are opposed, and as having amongst them the germs of truths which are receiving more decided recognition amongst minds whose desire is to secure culture of the most catholic kind. The orthodox Evangelicals on the contrary have somewhat of a repellent influence even upon those who take great interest in their past history. The Calvinism, in which so many of them are deeply rooted, has of itself no attraction for the English mind, accustomed to dwell in the genial light of sunnier thoughts than those which the students of the gloomy theology can ever be conscious of. The desire of the orthodox to perpetuate their narrow system of doctrine in a creed, and to impose the same upon the growing minds of those who are seeking more freedom, and desiring to enter into conscious sympathy with a more widely extended brotherhood, helps also to divert from them the kindly feelings of English Christians. Many therefore have heard with regret of the death of M. Coquerel, and their feelings will be shared by Englishmen everywhere who have entered into sympathy with the later movements of the Christian mind at home, especially with the tendency developing itself in the National Church towards rescuing the Religion of Humanity from a godless Positivism and co-ordinating it with the Divine Humanity of Christ. One of the newspaper telegrams from Paris announcing the great French preacher's death, speaks of his sermons as having attracted large congregations of English residents, more especially from amongst the Anglo-Indian colony. The views enunciated were such as might have been heard by listeners to the late Frederick Maurice's earnest utterances, or as may still be heard by the congregations who recognise beneath the terse and glittering eloquence of Mr. Stafford Brooke, or beneath the homely genial talk of Mr. Hawe is a far reaching liberality of view. But the sermons which were so attractive to English minds were grievous to the late M. Guizot. Whenever the liberal divine mounted the pulpit, the Protestant historian walked out of the Church, with the offended dignity of an aggrieved par ishioner, and there would follow him a band of protesting ones. This oft-repeated procession from the Oratoire Church was but one of the outward manifestations of the struggle which has since rent the Protestant Church of France. The first decided utterances of M. Coquerel which drew down upon him the rebukes of the Orthodox, were contained in a review of M. Renan's 'Vie de Jésus." He clearly asserted that he did not agree with M. Renan's religious views, but he spoke approvingly of the literary and historical aspects of the book, saying that its author with regard to such aspects had conducted his discussion in a fair and legimitate manner. As he bestowed commendation, instead of pronouncing the severe judgment expected, he was himself fixed upon for condemnation. The consistory of Paris suspended him from his ministerial office. This was in 1864. He was never reinstated. He secured after a while legal authorisation to preach, and with the help of other pastors, but with no help or sanction from the Consistory, he formed a congregation, and carried on his Church work with just the same organisation as would have been adopted had the sanction which was withheld, but which he never ceased to claim, been granted. The breach between the orthodox and liberal parties in the French Protestant Church from this time became wider and wider. The orthodox in their alarm at the increasing latitude of view claimed by the Liberals, agitated for the imposition of a creed upon the ministers of the Church, and upon, all laymen who took part in Church government. In 1871 M. Thiers summoned a general synod of the Church, urged so to do by M. Guizot. By a very slender majority, a confession of faith was adopted, and subscription to it demanded from all electors to the council of Presbyters. The resistance to this rule has however been so decided, that enforcement has been impossible. It is this question of subscription to a creed, which at present divides the Church into two opposing parties, the one that of the orthodox representatives of a Protestantism which prefers to cast out from its midst every principle of growth; the other, the liberal Protestants who wish to live in formal union with their orthodox brethren, to cultivate friendly feelings with Christians of other Churches, but to keep the path before them clear for future development. The death of M. Coquerel at the early age of fifty four removes one who can be ill spared from amongst those who are seeking in France to widen the arena of religious thought.

In Switzerland, the contest has taken a somewhat different turn. In France, the orthodox show no desire to remove themselves out of the influence of State patronage. On the contrary they are not a little inclined to rely on State aid to enable them to bring the protesting party to an acceptance of the formal confession of faith. But in Switzerland, the orthodox party is ever lamenting the favour which liberal theologians receive from the Cantonal governments; while the men of liberal tendencies look upon their connection with the State as helping to assure to them a freedom of thought and action which but for state-support they would be in danger of being deprived of. The orthodox, especially those of pietistic tendencies, shrink from the alliance which state connection maintains between them and the ministers whose views are tinged with what they regard as dangerous nationalism. Some have seceded from the National Church rather than be partakers of the benefits of State patronage with those they look upon as deserters from the faith, and are forming Free Churches which are supported entirely by the contributions of congregations whose sympathies are with orthodox Protestantism and Evangelical implicity. Amongst both parties still remaining in the Church

there is however a movement spreading which may help to ensure the perpetuation of the unity which is threatened. This is a movement having for its object the adoption of a more attractive ritual, the introduction of music into the services more largely than is at present the case. The pastors of the National Church are conscious that their congregations have been dwindling down to very scanty numbers, and while they have been disputing with one another, their flocks have been scared away by the very dulness of their services. One of the pastors confessed to ourselves that he always felt that he had to preach to people who were not roused to any warmth of devotion by any hearty service of prayer and praise. He was tired of the lifelessness of the Church ritual. There has been for some time a general desire to introduce a liturgy of a more decidedly musical character than it would be possible to import to the present services, and pastors have met together to devise such a liturgy. The amount of music now introduced is but an indication of the intense desire to put an end to the dreariness which has for so long oppressed their Church services. A like movement has been spreading in France and we hope that both there and in Switzerland the efforts to render the services of the Protestant Churches heartier and more full of life will be successful, and that the success will be accompanied by common resolve to extend the borders of Christian freedom, so that within those Churches there may be abundant room for all reverent Christian thought to ripen and develope.

FUTURE PUNISHMENT.

WE have received an interesting letter from the Revd. J. Ross on the subject of future punishment, but find it too long for the space at our command. We publish part of it however in our correspondence columns, as Mr. Ross raises an issue therein as to the views of the apostolic fathers on the subject of great importance. The corruption of Christianity began so early, that the views of the later Fathers carry little weight in the discussion. We want to know what the Scriptures themselves say upon the subject, and then the views of the men nearest the apostolic age. In reply then, to what Mr. Ross says as to the views of the latter, Mr. Constable (late prebendary of Cork) writes :—

"It has been often asserted that the theory of Augustine was the theory *always* held in the Christian Church. The doctrine of the Apostolical Church was in perfect agreement with Scripture. We see this from those "Writings of the Apostolical Fathers" which have been preserved to our time, and which are now readily accessible to the English reader in the admirable issue of the "Anti Nicene Christain Library," edited by Rev. A., Roberts, D.D., and James Donaldson, L.L.D. From beginning to end of them, there is not one word said of that immortality of the soul which is so prominent in the writings of the later fathers. Immortality is by them asserted to be peculiar to the redeemed. The punishment of the wicked is by them emphatically declared to be everlasting. Not one stray expression of theirs can be interpreted as giving any countenance to the theory of restoration after purgatorial suffering. The fire of hell is with them, as with us, an unquenchable one ; but its issue is with them, as with Scripture, "destruction," "death," "loss of life."

"We could not attempt to examine the writings of all these several fathers. We must content ourselves with a general view of their teaching and refer our readers to the volume which contains their writings from which they can judge for themselves. We challenge our opponents to controvert our view and we propose to give at some length the views of one of these fathers, Clement of Rome. We select him, because his first epistle is a work of whose authenticity there is little doubt. If genuine, it is the work of a man who was a contemporary, and highly-valued friend of the apostle Paul.* It would thus rank in authority of statement next to the testimony of an apostle. It was in fact "read in numerous churches" of the apostolic age "as being almost on a level with the canonical writings."†

"The first thing we notice in Clement is his silence on certain points. He very often speaks of future punishment. It is a theme upon which no Christian teacher can with fidelity be silent. Yet Clement never speaks of *the immortality of the soul*, so indissolubly bound up with the theory of punishment as taught by Tertullian and Augustine. Nor is there throughout his epistle (we speak only of his first epistle as the authenticity of the second is generally doubted,) a single passage descriptive of future punishment, which can be paralleled in expression with passage after passage from every writer who holds the Augustinian theory. In Tatian, and Tertullian, and Hippolytus, and Athanasius, and Augustine, we find expressions which have no parallel in the epistle of Clement. He differs from them just as much in what he says as in his silence. His descriptions of human nature are quite unlike the lofty descriptions of Plato copied by his Christian imitators. With Clement, man is a material being made out of that *matter* which from the time of Aristotle downward was distinguished from the intelligent principle, the mind. With him man has come out of a sepulchre, from utter darkness. So far from being an immortal, he is, in Clement's phrase, a mortal creature, consisting only of *dust and ashes*. With life as but the life of one day.* Such is Clement's general description of man with which we shall find his particular accounts in perfect harmony.

"We believe that for the Greek word *athanasia*, translated "immortality" there is but one meaning. We have never seen but one meaning given to it in any dictionary we have used, no matter what the theological bias of its editor. Its root, *thanatos*, has acquired new figurative senses ; but the derivative has but one sense showing emphatically the original and proper sense of the root from which it sprung. Immortality or eternal existence is its only sense. Clement tells us that this immortality is one of God's gifts to the redeemed : that if we would gain it we must "earnestly strive" for it : that if we do not thus strive for it we shall not obtain it.† He distinguishes it expressly from the moral qualities that make up the believer's character, his righteousness, truth, faith, holiness. Clement did not believe that the lost were possessed of, or should ever obtain, any immortality at all.

"We come next to another word *zoe*, "life," and observe how Clement uses it. The meaning of this word is not so undisputed as that in the last paragraph. Many writers suppose it to mean "happiness," "well-being," etc. We shall however, confine ourselves to Clement's use of it. In one place he speaks of it as the *life of Christ* which was taken from the earth. It can here have no meaning but existence. In another place he describes it as that *life of man* which may last but for a day. Here too existence is its only sense. In another place he expressly distinguishes it from that "righteousness," or moral well-being of man, with which so many confound it: with him righteousness is not life, but the way to life. And lastly he tells us that this life when joined to immortality is God's gift to His people, for which they must strive.‡ Clement did not think that there was any everlasting existence for the lost.

"One of Clement's descriptions of what will happen to the wicked hereafter, is that they will suffer "death," *thanatos*. He probably took this from the epistle to the Romans where it is the usual expression of Paul. The ready definition of this phrase by Augustinian theorists, whence derived we cannot see, is that it means death temporal, spiritual death in sin, and everlasting misery. This was not Clement's sense of it. In the first place, he expressly distinguishes it from spiritual death, or the ill-being of the moral condition of man. Death he tells us results from this. In the next place he identifies the death which sinners will hereafter endure with that death which Enoch was exempted from, which certainly was only the death which men, whether good or evil, ordinarily undergo. And he also identifies it with the death which Abel, Christ, and the martyrs endured.§ When Clement tells

* Phil. iv. 3.

† Writings of the Apostolical Fathers, edited by REV. A. ROBERTS, 1st Epistle of Clement, Introductory Notice.

* Epistle, par. xxxviii., xxxix., xvii,

† Par. xxxv.

‡ Par. xvi., xvii., xlviii., xxxv

§ Par. ix., viii., iii., iv., v., xvi.

us that death is the ultimate fate of the wicked, he means that they will be deprived of their existence.

"While we do not know whether Clement ever *directly* uses the verb "to destroy," *apollumi*, in his descriptions of future punishment, he leaves us in no doubt what is his established meaning for it. He applies it to the death of the people of Jericho by the hand of Joshua, to the death of the army of Pharaoh in the Red Sea, to the death which has come on all, good and evil, through sin.* We also see what force he attributes to it, when we find him making it the equivalent for such verbs as *anaireo thanatoo teleutao.*† Our readers will see the force of this from the consideration of the force of one of these verbs, *teleutao.* This verb *never* has the meaning of bringing misery or moral ruin on a man. It meant originally "to bring about," "finish," "accomplish," "end," and hence it came absolutely to signify "to die," as the end of human existence. We thus see Clement's meaning for that word *apollumi*, one of the most usual in Scripture for the end of the wicked. It meant, with him, their loss of existence.

"There can be no doubt then of Clement of Rome's view of future punishment. By his silence and by his words he tells us what it was. With him there was no immortality for any but the redeemed of Christ. Endless life was, with him, only for those who would use it to the glory of the Giver. For all others there was, after resurrection and judgment, the sentence to a second death, the loss of existence for ever from which they were never to be recalled to another life, another probation, another opportunity of salvation. And what we have established in the case of Clement we could with equal ease establish in the case of all the other apostolical fathers."

LETTERS TO THE EDITOR.

MR. SMOLLETT.

To the Editor of the Friend of India.

SIR,—In his late speech on the Indian Budget, Mr. Smollett informed the House of Commons, after 30 years experience in India and 20 years cogitation at home, that the people of this country will use any quantity of water for irrigation, if it is only brought to them in a proper manner. As that honourable member some 25 years ago, denounced the Godavery works as a "gigantic swindle," it is to be regretted he did not guarantee the sincerity of his repentance by apologising for this brutal insult, when he must have been perfectly aware of the great success of these works. And in fact that they are the only works in India, of irrigation, which have paid at all. He could to suit his own purposes denounce several irrigation schemes and the great apostle of extravagance Sir. A. T. Cotton, but he had not a word to say against the works in which this officer was personally engaged, The Godavery works have paid into the Treasury three times their entire cost up to date, increased the revenue of the district from 19 lacs a year to 55 lacs a year, established an export and import trade worth at least 1¼ millions sterling a year, banished all fear of famine by securing to the land an abundant and never failing supply of water, provided the district with the cheapest carriage for its products to markets, so as to secure to the cultivator the greatest possible value for his industry and outlay, and developed and established an industry which gives abundant employment to the laboring classes at such rates that poverty and distress amongst them are unknown almost. For such works Mr. Smollett has no word of commendation, and when your correspondent X. Y. Z. can explain how these results have been brought about, he will not be pointing out to me that I am mistaken in my estimate of the cost of railway carriage, as he will have something far better to think about. By-the-way, it will be just as well to shew how loosely his statements are put together. He says the cost *to the sender* was 6¼ pie a ton a mile and *he believes* the cost to the company was 2 pie a ton a mile, giving no data for his calculations or speculations, and omitting all about "subsidies to the railways" "deficits" and the credit taken for their additional earnings, when this was paid for out of taxation. My estimate was expressly based on the cost to the community, which had to be taxed to furnish the ways and means for all purposes, which he simply ignores or is unable to apprehend.

A. B.

THE COMING K.——

To the Editor of the Friend of India.

SIR,—A writer in the *Fortnightly Review* for October 1873, made a curious proposal. "I myself" he writes "see no cause for the abolition of kingship: I only ask for toleration, for those who think otherwise. The worst side of our present system, is not political but social. Where the existence of kingship works badly, is in the spirit of grovelling flattery which it encourages. The habit of cringing to princes, of hiding or putting fair names on their vices, must have a bad moral effect; it must tend to deaden men's feelings of truth and right. I suspect that this habit of prince-worship is one of the special evils of [illegible] a constitutional monarchy, and that it has more influence and appeals in a worse form, in a constitutional monarchy than it does in a despotism. But the spirit which goes down into the dirt at the mere hearing of the name of a Royal Highness would, under any other form of Government, find something else to go down into the dust before." Here follows the proposal. "For my own part" (writes Mr. Freeman) "I have no wish to disturb the existing form of the executive, except perhaps in one way. The experience of the present reign, shows that the duties of a constitutional sovereign are best discharged by a woman, and I suspect that to make constitutional monarchy at once respectable and lasting, *the wisest thing would be to entail the Crown on the female line.* Such a notion will of course be sneered at by those who find it easier to sneer than to think, but there can be litttle doubt that such a change would give constitutional royalty a new lease for another century or more. It is only the enemies of royalty who would expose it to the chance of another Charles II. or George IV."

These be "brave words" but do they find an echo in the popular feeling of to-day? It would then have been more likely to do so before the Providential event that gave new life to the expiring sentiment of personal loyalty? How many, thereby imitating our dark-visaged fellow-subjects, will hasten to kiss the Son "lest he be angry" (*Ki Huzur Khufa na ho*) in another month or two. Is there no *Flavius* to say to him—

"Who is not Timon's?
"What heart, head, sword, force, means, but is Lord Timon's?
"Great Timon, noble, worthy, royal Timon?
"Ah! When the means are gone, that buy this praise,
"The breath is gone whereof this praise is made:
"Feast-won, fast-lost, one cloud of winter-showers,
"These flies are couch'd."

Suppose it were officially given out that no bestowed "khillats" honorary titles, presents, or distinctions of any kind, would form part of the programme of the coming royal visit, would native loyalty burst forth in such a spontaneous flow of rupees as we have lately witnessed?

Unseeking loyalty is good so far as it will go,
But common people mostly seek a

QUID PRO QUO.

WHY ARE MISSIONS NOT MORE SUCCESSFUL?

To the Editor of the Friend of India.

SIR,—A correspondent of your's represents "the conduct of *nominal* Christians as the great obstacle in the way of the spread of Christianity in the country." This, we believe, is on the whole an incorrect statement. Missionaries especially those who have deserted their post to get up revivals among nominal Christians in India, have been of late but too prone to overrate this difficulty in their way. They forget that our countrymen, are shrewd enough to see that no proper argument against any system of religion, can be based on the irregular or scandalous conduct of those who have never come under its influence. But inconsistencies and irregularities in the conduct of those who have come under the influence of Christianity—who are not merely its professors but its teachers—are properly speaking the greatest obstacles in the way of Christian progress in the country. To make a long story short, the distinctions which Missionaries themselves make between white and black in almost every thing they do in the country, do more to injure the reputation of Christianity than the scandalous lives of all its false professors put together. A native Missionary—one who had of late been instrumental in bringing many of our countrymen from darkness into light,—thus stated the case in my hearing. "Some three years ago, a grand Council or synod of Missionaries of a particular denomination was held. 'A white-faced' Missionary, more generous there his brethren in general, proposed that, a native Missionary be in consideration of his faithful service extending over a quarter of a century, received into full membership. The resolution though backed by a record of services such as had been rendered by few of the Missionaries present, was vetoed. Another Missionary proposed that brother B—a European be admitted to full membership in consideration of the services rendered by him during the six months he had been an agent of one of the missions within the jurisdiction of the Synod. This resolution was adopted with acclamation by the Indian Missionaries—though it was subsequently vetoed by the Home Board." 'Do you not think' added the native Missionary referred to, "that the solemn prayer with which they began their council business was a mockery? Do you think God listens to such prayer?" Let Missionaries remove such injustice out of their tents, and a general outpouring of the Holy Spirit on themselves and those for whom they work, will be a posibillity.

TRUTH.

FUTURE PUNISHMENT.

I

To the Editor of the Friend of India.

SIR,—I read a few days ago, with much interest, an article in the *Friend* on the subject of "The Tree of Life." While I admired the sober and reverential strain in which the article was written, I could not help being struck with the *one-sidedness* dis-

* Par. xii., ll., xxxix,
† xxxix,

played. The existence of tenets which speak of the eternal punishment of the wicked was not even hinted at. How do you explain such a tenet as the following: "Marvel not at this for the hour is coming in the which all that are in the graves shall hear his voice and shall come forth; they that have done good unto the resurrection of life and they that have done evil unto the resurrection of damnation." An earnest enquirer after Scripture truth.

H.

NOTE.—We recommend the writer to get some of the literature that exists on the subject, by which he will find the text he quotes noticed at length. In particular he should study Mr. Constable's, and Mr. Minton's Essays on the subject. —ED., *F. of I.*

FUTURE PUNISHMENT.

II

To the Editor of the Friend of India.

SIR,—From a literary and historical point of view, some portions of your article on Eternal punishment invite criticism I think. You state that "the doctrine of eternal punishment was mainly the work of Tertullian and Cyprian, led away by the neo-platonic speculations of the second and third centuries into substituting the Greek doctrine of the necessary immortality of the soul for the doctrine of the Jewish scriptures, that the soul is not in its nature immortal," &c. On this assertion I would make two remarks:—

First, the doctrine was as firmly and generally held before Tertullian and Cyprian's time as after it. Clement of Rome, who died 100 A. D., and was a fellow labourer of Paul, in his second epistle to the Corinthians says. "If (we do not the will of Christ.) He will in no wise rescue me from endless punishment." Ignatius, who died 107 A. D., says. He that is thus defiled shall depart into unquenchable fire." Polycarp (died 167 A.D.) "There is a fire of approaching judgment and everlasting punishment perpetually fed for the profane." Irenæus (178 A.D.) "Christ sball send the impious, &c., into endless fire." Clement of Alexandria (194 A. D.), in one of his minatory addresses, speaks of the "endless torments" of the wicked. All these writers lived and wrote before the time of Tertullian (200 A. D.) and Cyprian (248 A. D.) Augustine (354-430, A. D.) in his "City God," Book II. C. 17 says that the views of Origen (died, 253 A. D.) were deservedly condemned by "the Church," implying that the doctrine of eternal punishment was esteemed the orthodox doctrine of the Church at the time. If according to your article, this doctrine was mainly the work of Tertullian and Cyprian," who both lived near the time of Origen, they must have had marvellous powers of persuasion to convert in a few years the whole "Church" into the belief of a new doctrine on such a momentous subject; and the "Church must have had scant respect for "the fathers" who lived before them, who so distinctly expressed the same views as their successors, Tertullian and Cyprian.

Secondly, you are wrong, I think, in tracing the adoption of the doctrine of eternal punishment, as held by Tertullian and Cyprian, to "neo-platonic speculations." You are not aware of, or forget, the fact that Origen himself, who denied the eternity of future punishment, was a much more distinguished disciple of the neo-platonic school than either Tertullian or Cyprian. His whole theological spirit was gathered from the writings of that school, and from the teachings of his professor, Ammonius of Alexandria a learned neo-platonist; and this more than any thing else, led him into those views which resulted in a denial of eternal punishment. He was the semi rationalist of his time, while such men as Tertullian and Cyprian, whom you describe as innovators, were the respectable orthodox theologians.

Your assertion that the "necessary immortality of the soul" was imported "from the old Greek philosophy" is also an inviting morsel for criticism. If you will allow me, and I can obtain the time, I may offer some remarks on that at a future time. Your statement is, I believe, erroneous. The old Greek Philosophy was never so far "advanced" as to hold such a grand truth as that.

J. ROSS.

NOTE.—We have noticed this letter elsewhere.—ED., *F. of I.*

DISESTABLISHMENT.

To the Editor of the Friend of India.

SIR,—It may be expected that I should make some reply to the letters of M. N. and the Revd. James Ross in reply to my former questions. I am however at present on leave, and at such a distance that your paper has reached me only ten days after publication, and were not the subject one of permanent interest I could not suppose that you would consent to insert an answer so long after date.

Your correspondents have the advantage of me that they are in earnest on their side, whereas I wish to be proved in the wrong. Still I cannot on that ground let unsound or irrelevant arguments pass, or consent to rash steps taken in *faith* till that faith also becomes mine.

M. N. asks me a few questions. First—why should not Government make good to officers what I called the "part of their pay" spent on a chaplain, and let them provide themselves. In the first place, as I said before, because the officers are so few and various in opinions, and so removable, that they could not make the arrangements themselves. Secondly, I do not see the difference in point of principle, between taking extra pay from the heathen people's taxes and giving it to officers for a chaplain, and engaging the chaplains direct. M. N. does not mean I suppose "give them the extra pay to spend on a chaplain, or a house, or what they like."

M. N. then speaks of inequalities in amount of ministrations, difference of sects, and asks what provision is made for the congregration that be in my station. That is my case. Not belonging to the Church of England, I do not get the services I should choose: being in a small place I get them but once a month. I accept this as a necessary inequality, which must be the same under any system. If it is my lot to be sent to a large station I shall get more. I have before and been for years without any ministrations at all, so I am not accepting what gives me the lions share, but the least. And I have learnt this at least in the Mofussil, which 1 did not know in England, that the differences of sects are nothing as compared with the unity of Christianity. Why, asks M. N. should not Government cut so much from each official's pay and supply his food by commissariat. Why? because we have plenty of bazars within reach. Were I employed at sea, that is the very thing I should expect done, and should I complain then because coffee was supplied me and I preferred chocolate, or rum when my taste was for whisky? And the latter is our case here.

I do not wish to make the question one between the Church of England and Dissenters; and were it so I as a Dissenter should not wish to exalt the superior canopy of the former, since I agree with M. N. on these matters. But I know as a fact that throughout my Indian residence, my circumtances have been such that I have owed to Government arrangements and C. of E. clergymen what ministrations I have received.

To Mr. Ross, I must acknowledge that the difference between us is one of faith. He thinks untried arrangements, which cannot be tried till the old and broken, would work well. I fear not: though I wish it were so. But doubters will ever think men of faith rash, and as some faith *is* rashness, what but trial can tell? Some men learn to swim by being thrown into deep water. Others trying the plan are drowned. I fear to go out of my depth, Mr. Ross does not.

That Christians even in the mofussil could support as many and good ministrations as they have, *if they would give enough*, cannot be doubted. But if they would give it, as a whole, I doubt; still more if they would agree in their choice, being still sectarians; whereas now choice is made for them. And Mr. Ross does not say who is to make the arrangements, or hold the property, or guarantee the salaries, or select the persons of the voluntary chaplains. And this is the first step. If this is to be done at home, let it be first done. Then the old stumbling block of Sectarianism will be in his way. That must be first removed. When we are again Christians and not sectarians, perhaps these things may be.

Mr. Ross makes a personal allusion to me which I would not notice, but that by silence I might be supposed to accept his commendations. I can lay claim to no such liberality as he supposes. His figures must be inverted

Lastly, Mr. Ross makes it a question of justice. If it is so, there is no more to be said. But that is what I, trying to see the arguments on both sides fairly, cannot clearly see or clearly deny. Where is the line to be drawn between the claims of conscience and the compromise of opinions necessary to hold society together? Has any Government put down standing armies because Quakers think all war wrong; and Quakers' money is mingled in the general taxes whence armies are paid? Is this injustice? If not, why the case under dispute? That the Quakers are a minority and the Hindoos a majority can make no difference in a question of justice. If only one man in a nation had a conscientious objection to part of the public expenditure that part should, on Mr. Ross's pure *principle*, he cancelled, if not, where is the line? We make one national judgment of what is good for the Hindoos and necessary for ourselves as their rulers, or what we believe to be the order of Providence, or what else may be the way in which we individually justify our presence here, overrule the Hindoo's wishes and tastes in all other matters, and why does injustice appear here. Many men conscientiously think that the State ought not to support education unless religious. Mr. Ross holds that the State should not support it unless secular. Some one's conscience must be violated. Is injustice then necessary? Not so, but conscience itself is a fallible and pervertable thing, and though to be handled tenderly, it cannot always be indulged. A man must follow his own conscience; but men collectively are not bound to indulge every man in the vagaries of his conscience I make these as general remarks, not of this special case where I am in doubt, but they would apply to the Quakers' objection to armies and to one side or other in the educational dispute. I cannot grant the *injustice* of our present course though I am uncertain as to its *expediency* Mr. Ross's way would be far better if it suceeeded. But in faith, and zeal, and organisation ready? "Yes, he says, throw those rotten old corks away, and you will find you swim beautifully. But I feel that I shall sink: or say my heart is faint." So the question stands—shall I throw away the corks?"

MOFUSSILITE.

September 14th, 1875.

RAILWAYS vs. CANALS.

To the Editor of the Friend of India.

SIR,—It is hardly worth while replying to X. Y. Z's., letter in your issue of the 28th August 1875 as it is clear he does not apprehend the facts on which I based my calculations. It is nothing to the point to say that grain was being carried during the famine at such a rate by the railways, unless he shews that this includes *all* charges to the community, such as subsidies to them, deficits on their accounnt and a profit besides. I never *estimated* the cost at 3 pie a maund a mile, or stated that railways were *earning* this rate, I simply took the data from a printed published report, by an officer employed on the line who gives this as the rate allowed by the Government.

I have no more doubt that grain is now being carried by the E. I. R. at the rate your correspondent gives, than I have of the deficit on account of the railways in each years' Budget; but does he really suppose that such a fact establishes the economic nature of the system he adocates? I have shewn from the experience of all the world the soundness of the late Mr. J. S. Mill's opinion on premature railway enterprize, in countries whose industry was in any backward condition. From Canada, from the United States, from Peru and from India, we have exactly the same story regarding their works, confirming in full, the scientific economic grounds on which Mr. Mill based his opinions and because I do not accept such flimsy, transparent statements as X. Y. Z. is pleased to put forward, I am declared to be entirely wrong and it is hopeless to put me right. After twenty years' experience of railways in India we find these works do not pay, that they do not save the products of the land from ruin when rain fails, that they have in no instance developed or established any great industries, have not improved the condition of the laboring classes, but added 140 millions to the debt of the country and an annual deficit of 4 millions sterling. And are we to accept such results as the best which can be devised to save the finances of the country! No one wishes more than I do that India could support railways, but the conditions of society will have to be very much changed before this is possible and your correspondent had better study to find this out.

A. B.

NOTICE TO CORRESPONDENT.

AN ENQUIRER wants to know whether the Bible sanctions polygamy: He must be content with a simple "No."

INDIAN INTELLIGENCE.

BENGAL.

THE total collection of opium this season has been about 40,000 maunds, or 3,000 maunds less than the collection of last year.

THE actual loss on the Secretary of State's bills on India from the 1st of April to the end of September amounts to Rs. 84,90,210, being Rs. 7,26,442 in excess of the estimated loss.

MOONSIFFS are in future to be officially addressed "Rai Bahadoor" if Hindoos and "Khan Bahadoor" if Mahomedans, the title being strictly official and not personal in their application, ceasing when the office is vacated.

IT is rumoured that Mr. J. A. Crawford, Collector of Customs Calcutta, now in England, whose leave expires in April next, will return to India rather earlier, and that he is to be attached to the Prince of Wales' Indian staff.

IT is said that the Government of India has sanctioned the establishment of a Statistical Department for Bengal. It will be made a branch of the Bengal Secretariat, and, if rumour can be trusted, Mr. Cotton is likely to be its first chief.

THE respective heads of the Topographical and Trigonometrical Surveys have been charged with the duty of framing for the consideration of Government, a scheme by which considerable reductions may eventually be effected in the general cost of the Survey.

MESSRS. HENRY S. KING & Co., East India Agents and Bankers of London, in conjunction with their branches, Messrs. King, King & Co., Bombay, and Messrs. King Hamilton & Co., Calcutta, have had the honour of receiving the appointment as agents to His Royal Highness the Prince of Wales during his approaching tour in India.

WE learn from a contemporary that during the Prince of Wales's stay in Calcutta he will have an opportunity of seeing polo played by the crack professors of the game from Munnipore, Dr. Brown, the Political Agent in Munipore, having undertaken to bring down a party of the best players in the State. Our Calcutta team must practise well together, if they make up their minds to play against such formidable opponents, considering how easily they were beaten by the Dacca Munniporees.

THE up-mail of the Eastern Bengal Railway ran off the line near Kissengunge at about 1 A.M. on Sunday last. Several waggons were smashed and the engine is buried up to the axles in a paddy-field. The driver and fireman escaped unhurt, but some of the passengers have been injured. On examination a rail was found to have been removed and placed across the line, and as this could scarcely have been done by people unacquainted with railway work, it is supposed to have been the act of some discharged coolies employed on the P. W. staff.

THE Lieutenant-Governor having being dubious about the fitness for human food of the third class beef sold in the local municipal market, Dr. Tonnerre has hastened to set his fears at rest by assuring him that the meat in question is "wholesome food." If this had not been the case, he thinks that, as the third class beef is very largely consumed by Europeans, some disease or disorder of a serious nature would ere this have made its appearance. Dr. Tonnerre has daily observed "khansamahs, belonging to very respectable masters, buying largely third class beef," and as the supply of third class beef is double that of superior qualities, there would be "a famine of beef in the market" if khansamahs reject the inferior article, We can quite understand, so far as the khansamahs are concerned, why there should be a large demand for inferior beef; but it is probable that the khansamah' employers are charged just as much as if a better quality had been purchased.

THE following are the arrangements for the disposal of business by the Vacation Judges of the High Court. The vacation bench on the appellate side, consisting of Mr. Justice Phear and Mr. Justice Lawford, will sit on Tuesdays and Fridays at 11 A.M. to take criminal business. Parties wishing to make applications of an emergent nature should communicate with Mr. H. Twidale, 36, Wellington Street, who will make special arrangements with the Judges for the disposal of such applications. On the original side Mr. Justice Phear will sit to take urgent applications only on Tuesday, 21st, Friday, 24th, and Tuesday, 28th instant, and on Friday, 1st October, Tuesday, 15th, and Friday, 19th November, at 3 P. M. His Lordship will also sit on Saturday, 2nd October, at 11 A.M., as Presiding Commissioner of the Insolvent Court. Appointments for really urgent business on the original side can be obtained at other times through the Chief Clerk, who will usually attend at his chambers from 1 to 3 P.M. daily, except during the close holidays and on Saturdays.

NORTHERN INDIA.

TWO fatal cases of cholera have occurred among the 5th Fusiliers at Simla. The regiment is preparing to go into camp.

THE Secretaryship of the Board of Examiners, about being vacated by Captain Garrett, proceeding on furlough, will be conferred on A. C. Talbot, of the Foreign Office.

THE Supreme Government have made a grant-in-aid of Rs. 5,000 to assist the military pensioners residing at Chunar whose houses suffered greatly by the late floods there: the distribution will be made under the orders of the Commander-in-Chief.

THE report that work has been stopped in the Kirkee small arms and ammunition factory, owing to the breakage of some portion of the machinery, which could be neither replaced nor repaired in India, has been officially denied. The factory is at work now.

IT is believed that Sir Charles Reid, till recently commanding the Lahore Division, will be out in India again about November next. *On dit* at Simla that he has been selected by the Commander-in Chief for a high command at the coming Camp of Exercise at Delhi.

THE Lahore paper informs us that the Board of Directors of the Sind, Punjab, and Dehli Railway Company, have offered the Government of India, through their Indian Agency, to undertake the working of the Punjab Northern and Indus Valley State Railways. The matter is now, we believe, before the Government.

THE news from the Gurgaon District is distressing. The floods have been heavy, and the sickness and mortality is very great. We hear, with regret, of a daily average death rate of abont 90 or 100. The Jharsa bund, which protected the civil station, has been swept away. Some houses have suffered from the flood, as well as the jail.

WE are credibly informed that during the month of August some 17,000 odd snakes were killed in the Lahore and over 8,000 in the Sealkote districts. The floods had driven these pests to seek refuge in the trees, shrubs and high pieces of ground, and the villagers, unable to plough or do anything else, devoted their energies to a wholesale slaughter, having in view the *prospect* of two annas reward per venomous snake allowed by a paternal Government, which we trust they may duly receive.

SIR JOHN STRACHEY went up to Almorah on the 15th, and will remain there till the first week in October, returning to the "Chilumchee" in time to meet the Viceroy. Lord Northbrook's chief object in visiting Kumaon is understood to be a wish to see Ranikhet and settle a controversy about barrack sites. "It is impossito forsee the consequences of a viceregal visit to Ranikhet," argue connoisseurs of hill stations. Abundance of wood, water, and level ground have suggested the place as one which might even supersede Simla.

IN order to assist the Director of State Railways and officers in charge of state railways by preventing the re-employment (ignorantly) of objectionable characters, quarterly lists of all appointments made to, and of dismissals for serious offences from, posts varying in salary from Rs. 400 to Rs. 16, are to be submitted by Managers and Engineers in Chief of State Railways to the Director for circulation. There are to be two separate lists,—one of appointments, the other of dismissals, but limited to such serious offences only as ought to debar the offenders, from re-employment on other State Railways, a brief statement of the offence being recorded in each case.

The following Grand Commanders of the Star of India have been invited to assist in the cermony of investiture in Calcutta:—The Maharajah Scindiah; Maharajah of Khasmeer; Maharajah Holkar; Maharajahs of Jaipore, Rewah, Travancore, and Pattiala: Sir Salar Jung; Rao of Kutch: and Begum of Bhopal. The following Knight Commanders have also been invited;—The Chief of Johore; the Maharajahs of Vizianagram and Bulrampore; Jay Mungul Sing of Gidhore: and Nawab Mahmoed Dowlah of Lucknow. The three Grand Commanders are to be admitted,—The Maharajah of Jodhpore, Nawab of Rampore, and Rajah of Jheend.

A CORRESPONDENT from Delhi writes:—It rained heavily and continuously at Delhi from the afternoon of the 7th until the morning of the 11th. Inclusive of the suburbs about 5,000 houses are said to have either fallen down, or to have been so much injured as to be unsafe and uninhabitable. Some 13 or 14 persons are reported to have been killed and a number hurt. There is a good deal of sickness among the natives, and suffering among the poorer classes. The prices of food grain are rising. Cholera still hangs about. Two more fatal cases occurred among the European garrison in the fort, and a third in the family of an European Overseer of the P. W. D. The floods from the local rain-fall have been general and unusually high for the season of the year. A small portion of the E. I. Railway line near Shahdera appears to have sunk somewhat owing to the scour of the flood against the wing walls of a culvert. It was therefore considered unsafe to run the train over it, and the Punjab mails were consequently somewhat delayed for a day or two. But prompt measures were taken by the Railway authorities to repair the damage and likewise to prevent all possible detention

and inconvenience to travellers. A special train was sent out from Dehli to bring in the mails and passengers.

A SERIOUS case of attempting to bribe a public servant has just been tried and decided by Mr. Smith, the Officiating Magistrate of the Meerut District. It appears that a certain Ramsarran Dass, banker and member of the Municipal Committee in Hauppur, got into a dispute with the Tehsildar of that place, who was acting as a Magistrate, as to the right he had to make certain rules concerning the sanitation of the town. This led to an investigation which was handed over to Mr. Billings the Deputy Collector. Hereupon Anund Saroop, a member of the Meerut bankers known as the *Pattar-wallas*, a family of great wealth and also a connection of Ram Sarran Dass, bethought himself of getting his relative out of difficulties by bribing Mr. Billings. For this purpose he called on Mr. Billings on the morning of the 4th instant, and stated in course of conversation that he would give a thousand rupees to get Ramsarran Dass off, adding, as he made his salaam, that he would bring the money in the evening. Mr. Billings at once reported the particulars of Anund Saroop's visit to Mr. Webster, the Magistrate, and took measures to prove the case by arranging witnesses for the evening when Anund Saroop should arrive with the money. Everything happened as had been expected. The money in gold-mohurs was placed on the table, confiscated by Mr. Billings, and the briber informed that he would be tried for his offence. The case was decided on Monday the 13th instant. The defence set up was on an *alibi*, and numerous witnesses were brought forward to swear that the defendant had not been in Meerut the day on which it was alleged that the bribe was offered. Counsel was procured from Allahabad, and no money spared; but in spite of all, the defendant was sentenced to six months' imprisonment and a fine of Rs. 1,000, in addition of the eighty-five gold-mohurs given as the bribe, or in default four months' extra imprisonment.

BOMBAY.

THE prospects of the Oomrawuttee cotton corps are very favourable.

SIR MADHAVA RAO continues as Dewan at Baroda after the the arrival of Mr. Melville as Agent to the Governor-General.

SAYYAD Turki, Sultan of Muscat, has abdicated in favour of his half-brother, Abdul Aziz. He now resides at Guadur, suffering from paralysis.

CAPTAIN P. W. Watts, of the 1st Battalion 18th Regiment, has been appointed Assistant Garrison Instructor at Poona in the place of Captain G. C. Sartorius, resigned.

INFORMATION has been received by the *Times of India* from Aden that Captain Dey, of the Royal Artillery, has been sent by the British Government to Shehar and Mackulla to preserve peace. These places are some miles from Aden, and some disturbance is reported to have taken place between the two.

WE see that the amount subscribed for the Prince of Wales's reception fund at Bombay up to Saturday last was only Rs. 27,656, but with the recklessness characteristic of Bombay, the expenditure has been calculated at nearly a lac of rupees. There is the Municipal Rs. 50,000 to fall back upon but even then there is a large deficiency.

THE portion of the ex-Gaekwar's effects, consisting of hanging lamps, chandeliers, mattrasses, &c., which was left in the custody of the police, has been removed to the auction-rooms of Messrs. Crawford and Co., where they will be brought under the hammer. It is said that the Baroda authorities have refused to authorise the continuance of Mulharao's firm in Bombay.

WE take the following delightfully fresh cricket sketch from the *Guzrat Mittra* :—"Take your bat in hand, if you are a player, and know this manly sport, and stand gracefully within the wickets, as we have seen many in times past, standing with inimitable grace, and what with the noise of horses and carrrages on the opposite side of green grass under your feet, the sky with its fleeting hues over your head, you seem to stand like a conquering hero watched by the bright eyes from the glass windows in the fort."

THE *Times of India's* Baroda correspondent states on good authority that on the occasion of the late Gunputtee festival some misunderstanding took place between the Resident and the Baroda officials as to whether Sir Richard should salute the idols. He, of course, refused to do so, and on the matter being referred for the decision of Government, it was definitively settled that on no account was the Resident to salute the idols. It was at the same time pointed out that his presence at the festival was not be taken as a mark of respect for the ceremony itself, but simply as a personal honour to the young Gaekwar. It seems strange that the officials of any Native State should have the audacity to make such a reference at this time of day.

A CORRESPONDENT of the *Bombay Gazette* mentions the following facts with regard to the Army in the Presidency, which certainly require explanation, if true—At Belgaum there is a European and a Native regiment of infantry. The native regiment is armed with the newest pattern breech-loading steel-barrel Sneider rifle, with the new sword bayonet, with saw backs; the English regiment is armed with the old iron converted Enfield rifle and old-fashioned bayonet. These rifles are so old and worn that they are quite unfit for use, and are not to be relied on to hit anything beyond 300 yards. Again the new steel field guns have been issued to the Artillery, but they have not a single round of ammunition with which to serve them in cases of need. Nor is the Arsenal at Bombay, I believe, able to supply them; but this you can ascertain for yourself.

THE Bombay correspondent of the *Pioneer* writes: "I mentioned in my last letter that Mr. Lewis had arrived at Bombay with a dramatic company. I attended their first performance in the Grant Road Theatre, and found *Ivanhoe*, which is not, to my thinking, one of the best of Mr. Byron's burlesques, rendered in a lively and amusing manner, not altogether so good as the original performance at the Strand Theatre, but entertaining nevertheless. The lively snatches of music from *La Fille de Madame Angot*, &c., were given in a manner calculated to be exhilarating to any one not possessed of an extremely critical taste, and the breakdown dances went with spirit. The performance must be described as provincial, but it did not lag, which is a great point with burlesque. Several pretty girls, with undeniable legs. Exhibited by the usual curtailed skirts, played their parts with vivacity, and without that vulgarity into which burlesque actresses are too often led by the indiscriminate or injudicious applause of their audiences. Last night, however, Dion Boucicault's drama of *Led Astray* was produced, when Mrs. Lewis, the Manageress, is reported to have achieved a great success in the character of the Countess De Chandoce. The adaptation of Wilkie Collins's novel of the *New Magdalen* is also announced for representation."

MADRAS.

THE Prince of Wales will occupy the Club at Ootacamund.

THE Government has subscribed ten thousand rupees to the Madras Reception Fund.

ASKA has been flooded for twenty-four hours. Five breaches have been made in the south embankment of the Goomsure River, and the whole country for miles is under water. Excessive rainfall has occurred also at Berhampore and Gopalpore.

ABOUT 2,000 deaths from cholera have occurred in the Salem district since it made its first appearance there about five or six weeks ago. Thirty deaths a day are still taking place, and there is great consternation amongst the inhabitants.

THE construction of the Colombo break-water will be delayed for at least one year longer than was expected. as the Titan Machine for laying the large blocks, which was expected in November next, will not arrive before May, and consequently work with it cannot be commenced until the end of the south-west monsoon next year.

A BACHELOR Aide-de-Camp of His Excellency the Governor is reported to have committed a disastrous error in a circular, in which for the guidance of Ootacamund ladies, who intended to go to the gubernatorial picnic at Kotagherry, he indicated that the "bridal path" was the best to take. He has only escaped the imputation of being jokative on duty at the expense of his reputation as a student of orthograghy.

THE Governor of Ceylon has received a despatch from the Secretary of State, intimating that His Lordship regrets that the contributions given for religious purposes, from the public revenue of Ceylon, should be viewed with disfavor in the Colony, but that he is not prepared to authorize any change which shall deprive either the Church of England or the Presbyterian Church of that support from Government which they have hitherto enjoyed.

FROM an examination of the usual Annual returns of Regiments of the Madras Native Infantry and Light Cavalry and Sappers, it appears that the average height of the Madras Army is 5 feet 6⅞ inches. There are 154 men upwards of 6ft., and 3,226 under 5ft. 5in. There are 494 men of 5ft. 11in., and 1,151 men of 5ft. 10 in. Of 5ft. 9in. there are 2,415 men of 5 ft, 8 in. there are 4,112 men. Of 5ft. you there 5,705, of 5ft. 6in there are 7,147 men, and of 5ft. 5in. there are 6,285 men.

THE *Madras Mail* writes:—"At last! Three live coolies commenced this morning the repair of the Wallajah Bridge. Only one hundred and forty days have elapsed since the foot-way of that venerable structure subsided during the passage of Lord Hobart's funeral, and dropped several unfortunates into the Coovum—and eternity. Three coolies, all lean looking, do not constitute a formidable gang of labourers; but it is comforting to see even this limited development of energy in the Provisional Executive of this Presidency."

THOUGH cholera is still prevalent in the city of Madras, we are glad to be able to say that the returns for the week ended the 10th instant, compare favorably with those for the week ended tho 3rd idem, the deaths being respectively 77 and 160, so the mortality may be said to have declined a fourth. The total mortality from all causes exceeded the mean of 10 previons years by 80 in the week ended the 3rd, and by 49 in that ended the 10th instant. Small pox, fevers, dysentery, diarrhœa, are less prevalent now than in corresponding periods of former years.

WE learn that, on the 6th instant, at Secunderabad, a man belonging to the 16th (Queen's) Lancers met his death at the hand of a comrade—by a mischance. Both men were drunk, *cela va sans dire*, unlimited supplies of horrible liquor being obtainable in all the hamlets round North Trimulgherry. Being drunk, a quarrel was easily established. The men commenced fighting in the back-room, when it is said one of them broke the neck of the other by violently throwing him against the edge of a box or iron cot. A Court of Enquiry assembled to investigate the affair, but the result has not transpired.

A CASE that has caused no little sensation in Tanjore, Trichinopoly and other districts in the Madras Presidency, as well as in some parts of Bombay, has been going on for the past week in the Tanjore Sessions Court, and is being tried by Jury before Dr. Burnell, Sessions Judge of Tanjore, and the Court house is thronged, outside as well as inside, by crowds of natives from varions parts. Eleven men, several of them being wealthy Caboolese merchants, trading in Trichinopoly, Bangalore, Poona and other places, are charged under various counts with house-breaking, abetment of theft, aud receiving stolen property, &c., the charge having reference to a daring case of burglary that was committed most mysteriously in the house of a noted dancing girl at Tanjore. on which occasion, her house was broken into and jewelery valued at 22,000 rupees was stolen.

THE question with regard to having a Town Hall for Madras is again being taken up, and it is to be hoped that something good will result from it. The Town Hall Committee formed some years ago, met at the Municipal Office, for the purpose of considering measures for providing Madras with a Town Hall. Mr. L. R. Burrows presided, and it was agreed that, if the Town Hall Committee will make over the Rs. 16,000 to the credit of the Town Hall Fund to the Municipality, the Municipality will sell their office premises, which it is expected will realise Rs. 24,000 and add this sum to the Rs. 16,000. Further the Municipality will collect funds from the public towards the erection of the Town Hall, and make arrangements to have the foundation-stone of the building laid by His Royal Highness the Prince of Wales. It has been decided that the hall be called the "Albert Hall." It is, of course, understood the accommodation will be provided in the "Albert Hall" for the Municipal Office.

THE sanitary authorities at Bangalore, says one of the local papers, deserve great credit for the successful efforts they have made to keep cholera out of that station. For a considerable time past cholera has been very prevalent in the surrounding country, and along the lines of railway which place Bangalore in communication with the outside world, but we understand there have been no cases in Bangalore—a circumstance which, under Providence, is to be attributed to the sensible precautions adopted by the military, civil, and sanitary authorities at the station to prevent an entrance of the grim visitor there. Stringent measures were taken at Bangalore. Country people and carts were not allowed to enter the station without examination, and the travellers were made to wash their clothes thoroughly as another precaution. The railway was placed in quarantine, and we believe that, at one time, Europeans were unable to quit Bangalore or to travel there, and last, not least, the station was thoroughly swept and cleaned, and the drinking wells well looked to. The result is, that Bangalore has remained free from cholera, while Madras and the country all about has been visited with the pestilence.

ASIA.

SIR CHARLES Dilke, it is reported, is about to visit China and Japan.

NEWS from Siam to the 8th of July states that despatches received by the Siamese Government announce disturbances of the Burmese frontier in the province of Cheen Hau, where a large band of dacoits, some 2,000 in number, were committing depredations. The had plundered a few towns, but at latest advices some 2,000 Cochin Chinese had gathered to resist their incursions. A Siamese Commissioner had been sent up to collect reliable information as to the doings of the plunderers, and endeavour to ascertain the true cause of the disturbances, and if, necessary, a Siamese force would be sent up to assist in protecting the inhabitants of the province. At Chiengmai also a number of Burmans and Karens had located themselves on Siamese territory and the Siamese authorities of Chiengmai had organized a force of about 2,500 men to expel them. A Commissioner had been sent to Chiengmai from British Burmah, where he met an officer of the British Consulate General of Siam. Both were treated as guests by the Siamese Royal Commissioner. A later despatch states that the Siamese forces, after frightening away a number of Burmese settlers, had burnt down some 240 of their houses.

THE *Times* discourses as follows about the advance of Russia to Merv: "The worst enemies of Russia do not believe that her troops go to Merv for the deliberate purpose of assailing Afghanistan; but they think that her collision with the neighbouring tribes will spread discord far and wide; that in self-defence she will be forced to drive her enemies over the frontier; that they would receive such aid from Afghan tribes as to make it necessary for her to follow them; and that the same pressure would force her to annex strip after strip of the Afghan territory if she were allowed. The only Power that could block the way is, of course, Great Britain. Hence, if we are committed to the defence of Afghanistan, and if the Russians have already seized Merv, the two States may meet face to face in the course of a very few years. But even this prospect is far less serious than it seems at first sight, for Russia possesses very slender powers of attack in the present state of her communications, and it will take many years to make them a real menace to the vast system of defence we have organized in India. Russia dares not risk any collision with our power while her base of operations is cut off from her outposts by a march of thousands of miles in length, much of it lying through pathless deserts, and none of it shortened by railways or canals. In the present state of her communications the one danger is that her approach might stir up the fanaticism of our Mahomedan population but the fanatacism of Bokhara and Kashgar exposes her to a far greater peril. Meanwhile, we shall do well to form no rigid plans of defence, but to be guided by events." The remarks of the *Times* go to strengthen the case of Russophobists who wish the advance of Russia to be arrested "in the present state of her communications;" and if it be true that "Russia dares not risk any collision with our power while her base of operations is cut off from her outpost by a march of thousands of miles in length," the probability is that really resolute diplomacy on our part would force Russia to withdraw from all her recent conquests in Central Asia; but this will not be the case a few years hence. The concluding advice of the *Times* is characteristic. We are to form "no rigid plans of defence," such as our foolish friends, the Germans, are in the habit of drawing up in anticipation of events; but rather to wait patiently till the plans of Russia are sufficiently developed to enable her to defy us.

LITERARY.

MR. CHARLES E. Wilson is, we read, engaged in translating the Baharutan-of Jami into English from the original Persian.

A CONTEMPORARY states that the Rev. Mr. Long has offered £2,000 towards defraying the expenses of a full collection of Indian proverbs. This munificent gift comes very appropriately from one of a class to whom the world is specially indebted for their labours in many fields of oriental research. His collection of about 6,000 Bengalee common-places was itself a feat of which Mr. Long might feel a little proud; though indeed he stands a long way behind another co-labourer who is credited with the collection of 25,000 Russian proverbs.

AMONG the many valuable facts which we find in a new work on Pyrology; by Major Ross, are some that strike us as being of considerable interest both to Government and others about to build; and especially here in Bombay, where everything in the way of building, whether it be a house, an office or a dock, is done by contract. We will let Major Ross speak for himself. "The *soi disant* mortar taken by myself from between the bricks of the Agra barrack, was supplied by a native contractor to the Department of Public Works of the Indian Government, and is made—or said to be made—from the kunkur, with which the whole district abounds. The reaction shows that this substance is litte bettar than mud. with a small quantity (perhaps 8 or 9 per cent.) of lime and magnesia. The costly building from which this composition was taken is not yet one of the many Indian public buildings which have been ordered to be "abandoned" by the Government, but they should fall on the heads of troops and others. Some have actually fallen, and one at Allahabad—from the morter of which just 5 per cent. of lime was obtained by a Calcutta chemist, at the request of Lord Mayo—fell and killed five or six people. It has been publicly stated in India, without denial, that the Indian Government has lost £40,000,000 by abandoned or ruined public buildings built of kunkur and mortar in the last ten years, though, on the other hand, it appears to produce a fair hydraulic cement."

ECCLESIASTICAL.

ON the Sunday before last the Archdeacon of Bombay somewhat astonished the congregation of his cathedral by reading, in the place of the sermon, "one of the homilies already set forth, or hereafter to be set forth, by authority." The quaint old lecture appeared, it is said, to be considered highly edifying by the congregation, "though it ran to considerably greater length than the usual sermons which our clergy, in this trying climate, beneficently bestow upon us."

GENERAL.

AS the friends of the ex-Colonel Baker have, with characteristic taste and delicacy, endeavoured to transfer to Miss Dickinson's shoulders a modicum of the odium which attaches to her indecent assailant, Her Majesty has considered it necessary to rebuke these unjust and ungenerous partisans by conveying to the young lady through Sir William Jenner an expression of her sympathy and good-will, accompanied by a request for her photograph.

THE *Times* leader on the breaking away of the Christian Provinces of Turkey has, it appears been followed up by a declaration on the part of Prince Gortschakoff to the effect that he foresaw the autonomy of Bosnia and Herzegovina and the rectification of the Montenegrin frontier with a port on the Adriatic. This is just what the insurgents have been asking for, and the knowledge that Gortschakoff "foresees" the gratification of their hearts' desires with doubtless strengthen their hands considerably.

SIR Frederick Currie, whose death on the 14th instant was announceed by Reuter, was third son of the late Mark Currie, Esq., of Gatton, Surrey. He was born in 1799, and educated at the Charterhouse and Haileybury; entered the Bengal Civil Service in 1817, and having held several intermediate posts, amongst others that of British Resident at Lahore was made successively one of the Secretaries to the Government of India, and a member of the Supreme Council. His energy and administratives capacities were largely tested during the first Sikh War, which was terminated by Lords Gough and Hardinge in 1847, and he was raised to the baronetcy soon after the battles of the Sutlej. Returning to England, he was nominated by the Queen in 1854 a Director of the East-India Company, and appointed in 1858 Vice-President of Her Majesty's Indian Council. He was a D. C. L. of Oxford.

THE island of Santa Cruz, the scene of Commodore Goodenough's murder, has enjoyed an evil reputation ever since its first discovery at the close of the sixteenth century. In 1594 the Spanish navigator Alvoro de Mendana, fitted out a squadron of four ships, with a vague intention of colonizing the Solomon Islands, upon which he had alighted in his previous voyage. Having, however, laid down their position with glaring inaccuracy, he was unable to find them where he fancied he had left them. As some sort of compensation, he came across the Marquesas, whence, sailing in a north-westerly direction, he arrived at a cluster of small islands, to the largest of which he gave the name of Santa Cruz. Here he attempted to carry out his scheme of colonization and landing his mariners, founded a city which, he hoped, would become the capital of an empire. His first step was to convert the natives, but his success was limited to teaching them to make the sign of the cross, and to repeat a few words of Spanish. Discord soon arose between his followers and the savage islanders, and, in the course of an altercation, a native chief was killed. Mendana, indeed, put to death the authors of the crime, but at his death, a few weeks later, the colony was broken up, and the Spaniards returned to their own country. The Santa Cruz group lying out of the ordinary track of sailing vessels, these islands were seldom visited until quite a recent date. It was in 1856 that Bishop Selwyn, accompanied by Mr. Patteson, made the first serious attempt to humanize these fierce islanders, but failed to effect much good. The neighbouring island of Nukupa has since acquired an infamous celebrity by the murder of Bishop Patteson. Close at hand, too, is the islet of Tubna, whence the missionary bishop and his coadjutor beat a hasty retreat. Yet a little farther Vanikoro rises out of the sea, the scene of La Perouse's shipwreck, and of the massacre of at least sixty Europeans, whose skulls were discovered in 1826 piled up in a temple.

ADVERTISEMENTS.

NOTICE.

RAMDEEN AND DOOLAUR, lately arrived from Trinidad per Royal Mail and P. and O. Steamer, are hereby notified that the Government Emigration Agent at Calcutta is prepared to pay them the sum of Rs. 5,687-8-0 deposited in the Colonial Treasury at Trinidad, for remittance to India.

No. 9, GARDEN REACH. ROBERT N. S. MITCHELL.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this office, all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned :—

Marquirite LANG of No. 16 Piazza Dello Statuto Turin in the Kingdom of Italy a spinster, died in Italy on the 24th November 1871.

William Bland LANG of Houstka in Bohemia in the Empire of Austria a Lieutenant in Prinitz Eugen Von Savoyen's 13 Dragoner Regiment in the Austrian Army, died in Austria on the 4th July 1872.

Doorgachurn DHUR a Hindoo Inhabitant of the Town of Calcutta carrying on the Trade and business of a Banker and Goldsmith in Khaugraputty Street in Burra Bazar Calcutta, died at Calcutta on the 24th January 1875.

Henry Archibald MERRITT a Retired Branch Pilot, died at Calcutta on the 20th August 1875.

Joseph THACKWELL, Lieutenant-General Sir Knight Grand Cross of the Order of the Bath, of Aghada Hall in the County of Cork in Ireland, died in Ireland on the 8th April 1859.

Maria Andriah THACKWELL, Lady, Aghada Hall in the County of Cork in Ireland, widow, died in Ireland on the 1st July 1874.

William Beauchamp Bagnal HARVEY of No. 49 Stockwell Park Road in the County of Middlesex in England, died in England on the 22nd June 1869.

Devereux HARVEY of No. 49 Stockwell Park Road in the County of Middlesex in England, died in England on the 9th November 1869.

Caroline Augusta MARK wife of Howard Mark of No. 118 South Collinga Street, Calcutta, died at Calcutta on the 30th September 1872.

Lucy LANG formerly of No. 37 York Street, Portman Square in the country of Middlesex and afterwards of No. 16 Prazzo Dello Statuto Turin, but late of Casa Manzi Viazenggia Tuscany both in Italy, widow, died in Italy on the 17th August 1874.

John SMITH of Calcutta a Medical Practitioner but late of No. 40 Talbot Road West Bayswater in the county of Middlesex in England, died in England on the 24th May 1875.

John Swaine PAYNE Intendant of the Opium Godowns, Calcutta, died at Calcutta on the 28th August 1875.

John HARRISON a Lieutenant in Her Majesty's 5th Hussars, died at Simla on the 14th June 1875.

Thomas Henry Forster STRICKLAND a Lieutenant in Her Majesty's 73rd Regiment, died at Cawnpore on the 19th June 1875.

Frederick Nathaniel CALLWELL a Captain in Her Majesty's 11th Foot, died at Jubbulpore on the 5th August 1875.

George Edward ABBOTT an Assistant Engineer, Public Works Department, Irrigation Branch, Bengal, died at Mooteharee Factory in Tirhoot on the 8th August 1875. Certificate granted under Section 36 Act II of 1874 to Francis Henry Abbott, brother of the deceased.

Joseph Alfred D'SILVA a Clerk in the Public Works Department, Government of India, died at Simla on the 21st June 1875. A like certificate granted to Mrs. Isabella Caroline Baylee, sister of the deceased.

James Roy WESTON of Mudhoobanee in Tirhoot an Assistant Engineer Public Works Department, Government of Bengal, died at Mudhoobanee on the 25th July 1875. A like certificate granted to John Weston Father of the deceased

Paul D'CRUZ a compositor in the P. W. Department Press, Government of India, died at Calcutta on the 31st July 1875. A like certificate granted to John Bernard, Executor of the deceased will.

NOTICE.

ADMITTED Claims against the undermentioned Estates are payable on Tuesday and Friday as usual.

ESTATES.	Claim or Dividend.	Rate of Dividend per rupee.	Remarks.
Clarke H. R., late of the Bengal Civil Service and Magistrate and Collector of Futtehpore ...	1st Dividend	@ 2as. 2¼p.

SUTTON'S HOME-GROWN SEEDS

ARE HELD IN HIGH REPUTE BY THE PRINCIPAL RESIDENTS IN INDIA, AS ALSO BY LEADING AGRI-HORTICULTURAL SOCIETIES, AND MESSRS. SUTTON HAVE PLEASURE IN REFERRING TO THE FOLLOWING UNSOLICITED TESTIMONIALS :—

From A. JAMIESON, Esq., Superintendent, Government Gardens, Ootacamund, India.

Aug. 6.—"The Seeds and Bulbs arrived here in good condition in March last. Both the Flower and Vegetable seeds have germinated exceedingly well, and given the greatest satisfaction."

From Mr. J. M. HENRY, Superintendent Agri-Horticultural Society's Gardens, Madras.

July 3.—"We received the Seeds and other things in excellent order. We have tried them all, and find them of first-class quality, and not one seed failing to germinate, and this being our very hot season, everything was against them."

From W. NEW, Esq., Government Gardens, Bangalore, India.

July 17, 1873.—"Your last consignment of seeds turned out well."

From Capt. JNO. HIBBERT, Executive Commissariat Officer, Neemuch, Rajpootana, India.

March 28, 1873.—"I shall send you another order in a short time, and only hope that the seeds will be as good as the last; certainly no better could possibly have been sent."

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)
CABINET MAKERS, UPHOLSTERERS,
BILLIARD TABLE MANUFACTURERS,
BY APPOINTMENT
To His Excellency the Viceroy and the Governor-General of India,
AND
His Royal Highness the Duke of Edinburgh
CALCUTTA.

THE NEW PATENT
ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade adver sement, which must of necessity fail to cor ey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little ever manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

No. 1707A. of 1875.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon:—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. . Traill's with its compound, which will not be sold: said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to: (1) Haldwani; (2) Kaladungi (*viâ* Naini-Tal); and, (3) Ramnagar (*viâ* Khyrna). From Haldwani to Bareilly Railway Station 60 miles over a *pucka* cart-road; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road; and from Ramnagur to Moradabad 45 miles *viâ* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

1, 2, 3—markets at the foot of the hills.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable: a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godown, and numerous out-offices, all slated; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given: failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,

Offg. Secy. to Govt., North-Western Provinces.

No. 1708A.

COPY forwarded to the Commissioner of the Kumaon Division for information, with reference to his letter No. 681, dated 23rd July 1875.

No. 1709A.

COPY, with 50 spare copies, forwarded to the Secretary to the Bengal Chamber of Commerce, with the request that the Notification may be distributed to all firms interested in tea cultivation.

No. 1710A.

COPY also forwarded to the Superintendent of the———with the request that the Notification may be published in the———not less than four times.

Special Programmes and Estimates.

Early orders are solicited, so as to allow ample time for perfect arrangements to be made.

Samples of Devices and Illumination Lamps may be seen, and prices ascertained, on application to

C. LAZARUS & CO.,

CALCUTTA.

HIBBERT'S

HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:

"April 23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A., writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship Sidney A. Jenkins."—Dundee, May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Bottles, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

HIGH COURT,
Calcutta, 28th August 1875.

F. S. COLLIS,
Offg. Administrator-General.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

LEOPOLD I ROI DES BELGES

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility. I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.

POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.

ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of *50 per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

GENUINE HOME-GROWN

VEGETABLE SEEDS.

FLOWER SEEDS

FARM SEEDS.

GENUINE, NEW, AND UNADULTERATED.

SUTTON'S HOME-GROWN SEEDS

ARE HELD IN HIGH REPUTE BY THE PRINCIPAL RESIDENTS IN INDIA, AS ALSO BY LEADING AGRI-HORTICULTURAL SOCIETIES, AND MESSRS. SUTTON HAVE PLEASURE IN REFERRING TO THE FOLLOWING UNSOLICITED TESTIMONIALS :—

From A. JAMIESON, Esq., Superintendent, Government Gardens, Ootacamund, India.

Aug. 6.—"The Seeds and Bulbs arrived here in good condition in March last. Both the Flower and Vegetable seeds have germinated exceedingly well, and given the greatest satisfaction."

From Mr. J. M. HENRY, Superintendent Agri-Horticultural Society's Gardens, Madras.

July 3.—"We received the Seeds and other things in excellent order. We have tried them all, and find them of first-class quality, and not one seed failing to germinate, and this being our very hot season, everything was against them."

From W. NEW, Esq., Government Gardens, Bangalore, India.

July 17, 1873.—"Your last consignment of seeds turned out well."

From Capt. JNO. HIBBERT, Executive Commissariat Officer, Neemuch, Rajpootana, India.

March 28, 1873.—"I shall send you another order in a short time, and only hope that the seeds will be as good as the last; certainly no better could possibly have been sent."

SEEDS PACKED FOR ALL PARTS OF THE WORLD.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2116.] Calcutta: Saturday, October 2, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

NOTICE.

SO much regret has been expressed at the discontinuance of the *Indian Economist* and its Supplements, that Mr. Knight has determined to publish on the 1st December next, the first number of a new monthly journal of Indian Agriculture, Mineralogy, and Statistics, the prospectus of which will be found in our advertising columns. The circumstances under which the *Indian Economist* was discontinued, have not been made public, and probably never will be. Suffice it to say, that the stoppage of the paper deprived the country of the only Agricultural, Industrial, and Statistical newspaper it possessed; and the new journal is designed to partially supply its place. The subscription will be Rs. 12 a year only, and Mr. Knight believes that he may count upon sufficient support, to warrant his announcing the publication without further delay. The new paper will be somewhat larger than the old *Agricultural Gazette of India*, and more comprehensive in its range, but will be strictly technical and in no way political or controversial. A limited space only will be allotted to advertisements.

EDITORIAL NOTES.

ALTHOUGH the south-west monsoon must be nearly over, an extraordinary flood in Guzerat has now to be added to the list of similar calamities for which the year 1875 will be long memorable. Ahmedabad has been suddenly submerged 14 feet deep by the rise of the river Saburmuttee, on the east bank of which the city stands. The river rises nearly a hundred and fifty miles north of the city in the Aravelli Mountains, near Mount Aboo. At Ahmedabad, its bed is fifteen to sixteen hundred feet broad in the rains. The Aravellis are nearly sixty miles in breadth, are more lofty than the Vindhyas, and for scenes of savage grandeur surpass the Western Ghauts. In their inaccessible fastnesses dwell wild fierce tribes that have never been brought under any yoke. The mountains arrest the passage of the monsoon clouds towards the great desert beyond, and the clouds descend in torrents of rain, swelling the Saburmuttee to an immense volume in an inconceivably short space of time. In ordinary seasons, the waters roll harmlessly to the Gulf of Cambay, but on the present occasion the rain appears to have fallen in a deluge over the whole district drained by the river and its tributaries.

The flood buried the entire city of Ahmedabad: and twenty thousand people have been rendered houseless. The railway bridge was swept away, and the Government bridge shared the same fate. The loss of life fortunately has not been great. From almost every part of the globe, we hear of floods such as have not before been witnessed by any now living. There must be a cause says the *Statesman*; but what can that cause be? "We hear of no huge comet devoting its attentions to us; the moon appears to be all right; everything seems to be going on much as usual amongst the stars, and yet we hear of little else than 'water, water, everywhere' until even our spirits are damped by it, and all creation wears a sloppy aspect."

***

IN answer to the call repeatedly made in these columns during the last few months, for the report of the Commissioners in the Stevens case, we are demi-officially told that, instead of being published in the usual way, the report has been communicated to the Landowners and Commercial Association, who "have been "carrying on certain negotiations with the Government in "reference to the case." The announcement is accompanied with profuse expressions of sympathy with the Association in the disappointment which the Report must occasion them; as the Commissioners have satisfied themselves by enquiry upon the spot, that a murder really was committed on the unfortunate man Habiram, and that, whether Mr. Stevens was guilty of it or not, there is no reason to believe that any conspiracy existed against him on the part either of the factory or the police. We shall notice the case next week, but under the disadvantage of not having seen the Report which the Government seems afraid to publish. If the report really does establish the fact of the murder, and that there was no conspiracy on the part of the witnesses against Mr. Stevens, it is childish to affect doubt about its real nature.

***

TRUE to its usual rôle, the *Pioneer* can see no reason why Mr. Roberts should be made Vice-Chairman of the Justices Indeed it finds a strong objection to his appointment, in the fact that if confirmed therein he would become "wholly independent of the local government." And why should he not? The independence which Mr. Roberts shews as a member of the Bench is distasteful it seems to Sir Richard Temple, and neither Sir Richard nor our excellent journalist can "see that Mr. Roberts has rendered "any services that mark him out for such unusually confiden-"tial treatment." Such writing is almost incredible. If we are to believe this lick-spittle,—we throw ourselves upon the forgiveness of the reader for the expression—the government has a right not only to expect complete subserviency from the men in its employ; but in the present case it is a good reason for refusing to let the public have the services of Mr. Roberts, that the Government would lose thereby the power it now has of resenting his independence at the Bench of Justices. Mr. Hogg's friends seem bent upon forcing a scandal on the public, at a moment when it is very desirable that there should be but one mind in the city. As soon as the holidays are over, the rate-payers should bring matters to an issue with their Chairman. The coming of the Prince of Wales is yet three months off; and there is abundance of time for new arrangements in the interval.

***

IT is complained that reports are current of Sir Richard Temple having "publicly talked of distressed zemindars and affluent ryots." No one will suspect this journal of any undue leaning to the zemindar, when we confess frankly our belief that there is room for speaking of the two classes in this way over wide districts in Bengal. The districts concerning which Sir Richard was speaking ought to have been specified. Thus it would be a cruel mockery of the ryots in Behar, and in some of the Western districts of Bengal, to speak of them as "affluent." On the other hand, the ryot in some of the Eastern districts has got the long end of the stick in his hand so firmly, that it is not unreasonable to speak of the zemindars of those districts as "distressed." We must strive to keep our minds open to the light in this great social controversy of ryot *vs.* zemindar.

What we want is exact information: and the Government is we trust in earnest to obtain it. If it listens to the Board of Revenue we shall never get it. We trust it will be understood that we are speaking of the Board as a whole. As a whole then, it is far too ready to despair of ever getting the exact information we require. In one word—we *must* get it. Thus we want to know the

proportion that the rent bears to the produce in every district, and every sub-division in the Province. And we can take no excuse in place of this information. It must be got, let the cost of the necessary establishments be what it may. How is it possible to legislate in the matter, when we are being assured that while the rent absorbs 10-16ths of the gross produce in Behar, it takes only 1-10th in some of the Eastern districts. If these are facts, the ryot is cruelly used in Behar, while the Zemindar is almost as much so in Dacca. We are not vouching for either fact. It is a heavy reproach to Government that we are not able to do so.

***

AFTER eight years of warning and preparation for the step, arrangements have at last been completed for the retirement of the Government from the position of shareholders in the Presidency Banks. The directors of each Bank have been told that the Government shares will now be sold in the market, but the operation is to be carried out, in communication with the Banks, so as to affect as little as possible the price of the shares. And yet the announcement was allowed to fall upon the market through the telegraph on Tuesday morning last, and of course completely disorganized it. It is most strange that Governments shews so fatal a facility for blundering in such simple matters. In the present case, it produced at once heavy complaints of "the sharp practice and want of "consideration for the monied and mercantile interests of the "country, which now seem a settled policy of Government." Instead of surprising the market in this way, quiet notice should have been given six months ago of the date when and the conditions under which the shares would be offered to the public. The Government holds it is said 550 shares in the Bank of Bengal, 560 in the Bank of Madras, and 1,200 in the New Bank of Bombay. We may perhaps add that the proprietary of the three Banks owe it largely to the Editor of this Journal that the Government did not retire as shareholders from the Banks in 1867, when the new Bank of Bombay was founded. The terms upon which the Government is prepared to regulate its future connection with these institutions have been communicated we are told to their directors, with the draft of a Bill for constituting the Banks afresh: and we shall probably see the Bill introduced into the Legislative Council next cold weather.

***

IT is consoling to learn that we have not laboured in vain, nor spent our strength for nought over the Civilian grievance question, but that Simla is at last dealing with it in earnest, and that "the embarrassing array of correspondence, statistics, and suggestions which appertain to it have been under consideration for weeks." It is probable that before the end of the year—and possibly before the exodus from Simla—the remedy proposed by Government will be announced, but it will not take the form of monetary compensation for *past* losses. It matters little what shape it takes so long as it deals honestly with the grievance it is to remedy. It will be most unwise to make two bites at the cherry. Look fairly—and to do so, you must look sympathizingly—at the position into which we have brought these gentlemen. Note what their fair and reasonable expectations were; and in awarding compensation, avoid the mistake that was made in dealing with the Indian Army. Do at once what is proper to be done. We cannot think of any "lion in the way" for the life of us.

***

IT is more or less difficult we suppose for all of us, and next to impossible to some, to discern how necessary it is that the Courts should hold a perfectly even balance between the dominant and the servient race in India. Instead of blaming Mr. Justice Phear for the striking impartiality of his judgments, because we find it difficult at times to reconcile ourselves to them—we ought to be proud of a judge who is almost an impersonation of the national love of fair play. In the case of *Issur Chunder Dey* vs. *Mr. Forbes* what are the facts. A trifling dispute takes place in Messrs. Mackenzie, Lyall and Co's sale-room, in which the plaintiff really does not seem to have been to blame, but in which Mr. Forbes, under momentary irritation and some misconception, commits an assault upon him and forcibly turns him out of the public auction-room, in the presence of a considerable number of people. And when the man brings an action for the assault, Messrs. Mackenzie, Lyall and Co. send the man a written notice, forbidding him ever to attend any auction on their premises again, and threatening that if he attempt to do so he will be kept out by force.

If the position of the parties were reversed, does it require the least imagination to tell us how indignant Mr. Forbes would have been, and how certain to have appealed to the Court for redress. What then are the Judges to do, when unfortunate disputes of this nature come before them, but forget the difference of race between the parties and decide accordingly. Any judge indeed who should do otherwise ought not to be on the Bench at all. But the man ought, we are told, to have brought his action in the Small Cause Court, which could have given him more than all the redress a man in position had any right to expect; and as he chose to go to the High Court instead, Mr. Phear ought not to have allowed him costs, but required him to take the apology at last tendered in full of all demands. Now, is it really to be supposed that Counsel would have allowed the man to accept the apology on these terms. They would have at once pressed for "damages," carrying costs with them. We are exceedingly sorry for Mr. Forbes and think the punishment out of all proportion to the offence, but we cannot see how Mr. Justice Phear could possibly have given any other judgment. The truth is such cases ought never to go to trial. The lawyers engaged in them ought to do everything in their power to stop them at the outset, when if their clients are self-willed, obstinate, or vindictive, they have themselves only to thank for results. Mr. Forbes should have been advised to offer the apology that was inevitable, long before trial, when the Court would have given neither damages nor costs. When such cases come to trial, the Judge occupies a most invidious and unenviable position; and even should his judgment halt, it is entitled to respect when we see plainly that it has been dictated by conscience. Since writing the above, we have received a communication on the subject that we shall notice in "the Week."

***

IF the *Pioneer* knows the true history of the negotiations that have been going on concerning the young Nizam's attendance at the coming Durbars, it is dealing most unhandsomely by Sir Salar Jung when it says that he "is astute enough to serve God and "Mammon to save his credit with both. To the Viceroy he can "plead the ill-health of his charge as an excuse for his absence: "to the people of Haidarabad he can represent that absence as a "convincing proof of his independence." Sir Salar Jung should never be spoken of by Englishmen but with respect, and these imputations are most unwarranted. Our contemporary says:— "That the youth is very delicate is beyond question, but whether "so delicate as necessarily to make his journey to Bombay a "danger we greatly doubt. It seems to be forgotten that if the "Nizam does not meet the Prince of Wales on his landing, the "loss will only be the Nizam's."

Our Foreign Department, overlooking the age and delicacy of the child, contrives to make a serious blunder, and Sir Salar Jung is then put into the painful position of having to force an acceptance of the invitation upon the Court, or of being held up to the country by the English press as a low intriguer, seeking to make capital out of the matter for himself. A very grave mistake has been made, of which the Foreign Department must be as conscious as ourselves.

***

THE Secretary of State has at last decided the long-pending controversy between the Banks of Bengal and Bombay regarding the agency of the former at Bombay. Lord Salisbury considers that Government cannot require the Bank of Bengal to employ that of Bombay as its Agent, and has declined to insist upon the removal from Bombay of the Bank of Bengal's Agency. We think Lord Salisbury is right. Few Boards shew the pertinacious courage the Directors of the Bank of Bengal have shewn in this quarrel, and they have their reward.

***

SO far from our difficulties with China being at an end as was hoped, the *Times* of Tuesday last surprised London with a telegram stating that the Chinese shun all effectual performance of the agreement at Tientsin, and that Mr. Wade has notified his intention of leaving Pekin on the 13th October, unless a satisfactory settlement is come to. The *Times* has some reflections upon the subject of a war with China which are worthy of attention. "Even a European power would now find the Chinese a vastly more formidable enemy than they were thirty or even fifteen years ago. We should not get out of a war with China without having to pay heavily in men as well as in money. Nevertheless, the issue could not be doubtful. We should assuredly be victorious, though the victory would have to be attained by blows struck at those parts of the Chinese Empire which feed our trade most copiously. But the result of which we should be most apprehensive, if we were again to be forced into a mortal struggle with China, would be the anarchy that would inevitably follow the defeat of the Pekin

government. The existing dynasty, already discredited, and secretly believed by the population to be effete, could not stand the shock of another disaster. The Imperial family would fall and probably involve in their ruin the whole order of Mandarins, who have been practically trained in the work of administration. Both the elaborate official system by which the provinces of the Chinese Empire are held together and the organization of the army would at the same time go to pieces. China would be splintered into a score of petty principalities, and, losing the long and potent tradition of its divinely ordained Government, could only be redeemed from social dissolution by the vigorous grasp of some civilized conqueror. But what nation would dare to accept the charge? With all our faith in the governing capacity of England, we own that we should recoil from the addition of two more Indias to that which we rule already."

***

THE latest news from Constantinople is to the effect that the German, Austrian, and Italian consuls who have returned from Mostar, report that the Herzegovinian insurgents demand an armistice, and that the European powers should guarantee certain reforms. The Porte refuses all concessions, until the insurgents submit. We can of course sympathize with this attitude, but Turkey unfortunately seems bent on supplying Servia with a pretext for engaging in the fray; while the more the movement spreads, the smaller is the chance of its being settled to the satisfaction of the Porte. Europe might look on while Turkey was exterminating merely a few bands of desperate mountaineers, but if the Principalities with their European alliances are forced into the strife, the prospect of intervention will be no longer remote, while the temper of the Slavonic race would not admit of that intervention on any but favourable terms to the insurgents. The advice said to have been given to the Sultan by our ambassador proves to have been apocryphal; Sir Henry Elliott having merely "been charged to give the most positive assurance of the friendly feelings of Great Britain towards Turkey, to destroy the lamentable impression that had been produced by the attacks directed by the Opposition in Parliament against the Turkish Government."

***

THERE appears to be some chance of President Grant being elected for a third time after all, on the ground that the Democrat candidates are held to be unsound on the Currency question. On this, the country knows that the President himself is not only sound, but reliable, so that after all it may appear, even to the Liberal Republicans, that they may do worse than fight under General Grant's command once more. This is not a prediction, but is within the limits of possibility, if the Democrats are induced to take their stand upon "Inflation," and should carry the majority of the western electors with them. The Republicans look upon a return to specie payments (honest money as they say) as the only right currency policy, while the Democrats are all more or less infected with what is called the "inflationist poison." We doubt much if the Republican party is altogether right in this controversy, but need to know more about it than we do to pronounce any opinion. It is easy to stigmatize a policy that is really sound by epithets that do not honestly declare what it is, but suffice to create a prejudice against it.

***

THE publication of *The Life and Works of Marie* is very opportune. This distinguished lawyer belonged to the Republican party of 1848, and on account of his conservative views was chosen a member of the Provisional Government of M. Lamartine. Marie was the prototype of most Republicans of the present day. He was never a Revolutionist. While holding democratic views he repudiated all impatience, violence, and factitiousness. He rejected "the sacred right of insurrection," and trusted to time and legal agitation to remedy abuses. He held that the Revolution of '89 was turned from its natural course by the declaration of the Republic. As a barrister, he never sought triumph we are told at the cost of principle. He labored to enlighten the judge, not to deceive him; and won the respect of all for the probity of his character. As a member of the Government of 1848 he was appointed to the post least fitted for him, that of Commerce and Public Works, to check Louis Blanc and his scheme of national workshops. It appears that each minister was interested only in the department entrusted to him. Marie was a kind of standing counsel for Louis Napoleon for some time, but never associated with him after the *coup d'etat*. He died in 1870, aged 72.

THE accident in the Solent where the Queen's steam yacht ran down Mr. Heywood's yacht, and caused the loss of three lives, has given rise to much angry discussion. The jury on the inquest could not come to an agreement, but it is now known that all but two were in favor of returning a verdict of manslaughter against the officers of the *Alberta*; the remaining two, though holding them blame-worthy, did not wish to go so far as this. The inquest has now to be held over again before a Sessions Judge. Public opinion runs strongly against the officers of the *Alberta*. Every one knows the sort of official that is bred up in the atmosphere of a court, servile to those above him, arrogant to those below. "We are the officers of Her Majesty's yacht; and people who get into our way must look to be run over; what do we care for the rule of the road at sea." This is the kind of feeling we are told which seems to have animated the officers of the *Alberta*, and the outside public is naturally indignant.

***

THE secret correspondence between the *Comte de Mercy-Argenteau, and Marie-Thérèse*, has reached we see a second edition. These letters were extracted from the archives of the Austrian Foreign Office, and have the interest of a romance. They extend over a period of twenty years, commencing with the arrival of Marie-Antoinette at Versailles, and describe the most minute details of her daily life, indeed almost the hours of it. Trusted agents reported all her acts and movements to Mercy, who forwarded them to the Empress Marie-Thérésa. It was the espionage of a fond mother, anxious to promote the happiness and safety of her daughter, amid the perils and intrigues of a corrupt court. It was Comte'de Mercy it seems, who many years later arranged the interview between Mirabeau and Marie-Antoinette, that forlorn hope of the French monarchy. Mirabeau is said to have been greatly struck with the Count's good sense; but Marie-Thérésa, chose all her agents with the discernment of genius, and it was thus she selected Mercy, who, although a German, became more than half a Frenchman while still Austrian ambassador. Indeed, he was naturalized: and it was as a Frenchman that the Revolution confiscated his property. It was Mercy who brought about the unhappy marriage of Marie-Antoinette with the Dauphin, believing her influence over her feeble husband would repress the scandals at the court. His colleague in this work was the Abbé de Vermond, Marie-Antoinette's reader. The Emperor Joseph II. seems never to have read this secret correspondence; the *Gazettes* supplied him, he said, with all the information he wanted "about royal brothers and sisters." There are no longer any secrets concerning poor Marie-Antoinette, to be distorted by calumny or transformed by legend. She was but fifteen years of age when she arrived in France, and, contrary to what has been generally asserted, her welcome was anything but cordial or brilliant. She was a ray of purity in the old Court, and for a few days her youthfulness and beauty produced an agreeable surprise. A mere child, Austrian diplomacy counted upon her reforming its vices and redeeming the character of her husband, who was a kind of young savage, regarding all happiness as summed up in hunting, masonry, and lock making. Marie-Antoinette amused herself with dogs, horses, and toys, and at last neglected even the demands of her toilette. The Empress scolds her in these letters for neglecting her teeth and nails, and for not maintaining a proper carriage.

***

THE revision of the New Testament is making slow but steady progress. The revisers meet for a week once a month, and have already been engaged on the work for five years. Dr. Vance Smith calculates that it will take five years more to complete the New Testament. The Gospels have been completed, excepting two points that are still in dispute. The Acts and the small Epistles have been once revised, but have to undergo a second revision. The Epistles of Paul will then be taken up and are expected to occupy a long time. It is a pity that the public should have so long to wait. The first publication might be in parts, beginning with the Gospels, then the Acts and small Epistles, and finally the Epistles of Paul. If, as is expected, the revised translation brings out the meaning more clearly, it is desirable that we should have the benefit of the new translation as soon as possible, and the publication of portion by portion, as they are completed, would be eagerly welcomed.

***

NOTWITHSTANDING the loose democratic talk that is common in some quarters, there appears to be no real evidence that royalty is less popular in England to-day, than it was at any former period.

Englishmen are fond of grumbling, and the fact that they are occasionally heard to complain about the imperfections of their own institutions, is no ground for believing that they are ready to uproot them, and plant a foreign product in their place. As to the loyalty of the lower orders of the people, it is probably a purer feeling even than that of the upper, whose devotion to the throne is, in great part, based on the knowledge that their own position and dignity stand or fall with it. The working classes would lose neither rank nor wealth by the overthrow of the monarchy, and might even indulge dreams of great gain to themselves from the establishment of a republic. Yet whenever royalty appears with affability among the multitude, loyalty is seen to be strong and deep in the heart of the English people. The visit of the Prince and Princess of Wales to Sheffield, and their enthusiastic reception in that city, are a pleasing prelude to the Prince's visit to India. It will not be possible for the cynic or the democrat to say that the displays of loyalty that we hope to see in this country are the offspring of novelty and ignorance, manipulated by officials from motives of their own; that those who have the Prince with them always are destitute of such feelings and grudge the money to provide for the Indian visit as they grudge the grants for the royal family. Sheffield, represented in Parliament by Mr. Mundella, has declared that the working men do not disapprove the Prince's journey, or grumble at its expense, and when the Prince spent four days in Sheffield the in habitants showed that Mr. Mundella was right. There could have been no better proof that they were not opposed to the Parliamentary grant than the profuse expenditure they voluntarily incurred in transforming their grimy, town into a fairy-land, to receive the royal pair. The Prince was so gratified by the reception, that he requested Mr. Mundella to convey his thanks to his constituents, and to do so "in the heartiest manner of which he was capable." The hon. gentleman did so, and "the announcement was received by the vast audience with vehement cheering again and again renewed." Chivalry as well as loyalty is still an English virtue, and the effect of the Prince's public appearances is heightened by the presence of the Princess. It is a great pity that she could not have accompanied him to India. It would have added an infinite charm to the visit, and would have made an impression on the people that would not soon have passed away.

***

A CORRESPONDENT thinks that Sir John Strachey is a little unfortunate in his choice of Secretaries, and directs our attention to an amusing slip or two of Mr. Atkinson's, in the Gazetteer of the Saharunpore and Aligurh districts, just issued from the office of the Board of Revenue. "Mr. Atkinson is not abusive like Mr. ——— but his style is equally confused; while his ignorance of the laws which govern the construction of sentences renders his meaning at times unintelligible. Thus, on the second page, we read that the Ganges and Jumna flow southward *in an almost parallel line*: and at *page* 97 that a certain design was carried out, but not without considerable *murmurs* which nothing but the presence of an overwhelming Military force prevented from *breaking out into open rebellion*. On the same page we read of a Begum, who *repulsed* with scorn offers that were made to her. But all this is nothing to Mr. Atkinson's description of the physical geography of the Sewaliks, which "may be roughly described, "as a series of right-angled triangles, with bases resting *on* "the passes, perpendiculars facing the south-west, and *hypothen-* "*euses* (sic) sloping towards the north-east. Hence the Sewalik "outline which strikes the traveller; a feature which is constantly "exaggerated owing to the destructibility of the material of which "the hills are composed."

Mr. Atkinson, adds the writer, has made himself acquainted with the names of the different parts of a right angled triangle; but unfortunately has not learnt how to spell them, unless such a distinguished master of the art of transliteration, as he has shown himself to be in the preface, is prepared to maintain that *meusic* is the correct way of spelling—music. "The idea of applying a generic "name peculiar to bodies of two dimensions to solids will be new, "and we should think startling to mathematicians; but the most "astonishing fact of all is the manner in which the bases of these "triangles contrive to rest *on* the passes; for we are quite sure that "when we last saw the Sewaliks the passes separated the different "hills which compose the range from each other, and we do not quite "understand how they have worked their way underneath them." This is certainly amusing, but is perhaps a little hypercritical with a work of the size of the *Gazetteer*, produced under the disadvantages that attend publishing in India, where the author gets no help whatever from the intelligence of the "reader." We are afraid our correspondent might cull some amusing slips from every one of our own issues, if he was minded to do so.

***

EXCEPT as a politician, Mr. Gladstone seems to be little known on the continent. Public writers even in France, who have a full acquaintance with his career, have never been able to comprehend how so distinguished a man, inspiring no personal antipathy, has lost not only the confidence of his party, but apparently of the country. M. Quesnel attributes it to his having "let England down" in the councils of Europe. Mr. Gladstone did not, like Palmerston, respond to the patriotic passions of his countrymen. What Canning dreamt of for his native land, Palmerston secured for her—the rôle of arbiter; and this Gladstone let fall through his hands. The work of Mr. Gladstone has been altogether confined to home reforms; he has taken no higher interest in European events than that of commerce. The nation has thus been wounded by him in its *amour propre*. Mr. Gladstone never quits the ideal; and places it far too high for the practices of international policy, and the traditions of diplomacy. He is at home on financial matters—where it has been observed that men possessing a strong religious sentiment often excel—as well as on questions involving the principles of justice and liberty. In his youth he dreamed of a paternal government exercised in the name of God; in his mature age, he has visions of pacific work and perpetual peace for his country. All this is allowable in philosophy and private life, but is not suitable for a minister who must be a man of fact. "Celestial Cabinets" are short-lived. M. Quesnel sees in Mr. Gladstone simply the type of a finished scholar. His writings and his speeches, whatever be the subject, are stamped with elegance and erudition. He is never pedantic; when he speaks, his audience becomes an academic *seance*, and whether he explains a budget, or expounds a law, it is done in the language of the gods. By nature he is a poet and an artist; an Athenian born on the banks of the Thames, and France would like to rob England of one of her glories. So substantially talks M. Quesnel.

***

THE Queen has caused a letter to be written to Dr. Dickinson, expressive of her admiration for Miss Dickinson, and requesting a photograph of the young lady. Such are the rewards that wait upon virtue. We begin to think, says the London letter of the *Statesman*, that a young lady clinging to the outside of a train will become quite an ordinary accompaniment of express travelling.

***

SCIENTIFIC men in Paris question, it seems, the representations of Darwin and Hooker as to the existence of insectivorous plants, and attribute their conclusions to hasty or imperfect observation. They think that the phenomena have either been exaggerated, or that their interpretation is forced.

***

AMERICA leads the way vigorously towards solving the problem as to the effects of liberal education on the female mind; and by and by we may expect to see its effects on the character of American literature and science. Female authors have already distinguished themselves in the *belles lettres*, and the popular literature of Western Europe and America has without doubt had its character modified by their influence. With a few honourable exceptions however, womankind has not yet done much in the way of strewing the walks of science with the charms of feminity. But something more in this direction may be expected from our fair cousins of the United States. Vassar College alone is a fertile garden of girl graduates.

***

IN our youth, fancy inspired by Cooper's tales, peopled the banks of the Hudson with fierce Red Indians in their war paint, with their savage garb picturesquely fringed with dripping scalps. The golden hair of sweet seventeen has now taken the place of that barbaric vision. Vassar College is on the banks of the Hudson, 75 miles from the city of New York. Mr. Vassar, the founder, made a fortune by brewing, and consecrated it to the cause of female education. He founded the college called by his name, for the purpose of giving to girls an education equal in every respect to that which young men receive at college. The Charter dates from 1861, but the actual work of the college began in 1865. There is a president, a lady principal, and nine professors of whom two are ladies. There are besides more than twenty teachers and instructors, almost all of whom are ladies. The subjects taught are

comprehensive enough—mental and moral philosophy, ancient and modern languages, mathematics and natural philosophy including chemistry, natural history including geology, mineralogy, botany, zoology, and physical geography; astronomy, physiology, and hygiene; the English language, including rhetoric and *belles lettres*, music, drawing, and painting. There are at present in the institution, according to the account before us, 420 students. The two lady professors are Miss Maria Mitchell, Ph. D. of Astronomy, and Helen W. Webster, M. D., of Physiology and Hygiene, the latter being ex-officio resident physician.

Novel undertakings prosper by private enterprise and bounty in the States. In England and in India we look too much to Government aid to establish institutions. For instance, we hear a good deal of complaint from natives of rank and cultivation, that our system of education established by Government does not take hold of the higher classes, and that they need something like an Eton and an Oxford in India. Could not a few wealthy native gentlemen do for high class education here what Mr. Vassar of New York has done for the ladies of that State?

***

AN American journalist, Mr. C. F. Wingate, has written an interesting book about newspapers. Among other effects of the modern newspaper, he suggests that it has greatly modified the quality of oratory in these days. There is a good deal of truth in this. The press from being the handmaid of oratory has become its mistress, and as a general rule our great speakers compose their speeches more with a view to their publication than with the purpose of carrying the sympathies of their audience by storm. They doubtless seek to keep in view both the audience and reading public as far as possible, but it is difficult to serve two masters whose requirements differ; and this double purpose is not infrequently a cause of failure. The logical cohesiveness and moderation so essential for convincing the critical reader are not compatible with the eloquence, and the audacity of passion which distinguish oratory and take captive the judgment through the emotions. And critics will not judge a published speech by the laws of oratory, but by the laws of logic and common sense. In fact the laws of oratory strictly so-called may be said to be obsolete, and our best speeches are simply well-delivered essays, and sometimes spoken newspaper articles. Oratory is dying out and the press is the main cause. Even our best preachers seem to prepare their sermons as much for the reading public as for their flocks. This is a mistake, for sermons with few exceptions are little read. Clergymen are the class whose special interest and duty it is to cultivate oratorical power, and yet nowhere, as a rule, is oratory of so feeble a character as in the pulpit. We have long sought an explanation of this fact in vain.

***

AT the Congress of the British Association just held at Bristol, the ladies had a day to themselves in the Economic Section. Four able papers were read by fair authors, and other ladies took part in the discussions, and seven-eighths of the audience were ladies. Did the men absent themselves because they disapprove of the public appearance of the ladies, or was the rush of ladies to hear their distinguished sisters so great that the gentlemen gallantly gave place to them? In the absence of information, we prefer to adopt the latter explanation. Still it is undeniable that a strong prejudice lingers in the male mind against intellectual ladies, especially when their accomplishments are of the scientific order. We believe the prejudice is destined to pass away. That some of the pioneers who have asserted the rights of women in the field of education have belonged to the type that we call "strong-minded" is doubtless true, and it was probably necessary. It required strength of mind to dare the unpopularity and the ridicule that were inevitable. But these being overcome, the sex may now come forward to reap the fruits of victory, without much fear of being supposed to unsex themselves. We could never understand why the highest mental culture that literature and science can give should be considered destructive of the feminine character.

COLONIZATION.

THE CENTRAL PROVINCES.

RETURNING to the Charwa Jungle colonization scheme we note that its first principle is that to be successful the colony should on no account be small. If a colony of 2,000 souls can be established the chances of success are greater, than with one tenth of that number; while the danger that the colonists may lose heart and desert becomes proportionately less. The second principle—that the colonists should be men of the industrious cultivating classes is also self evident. But the wisdom of having resort to Oudh and the N.-W. P. for such men is not so clear. Not only in the Nerbudda valley, but in Saugor and Dumoh, it is well known that the best of the cultivating classes are descendants of immigrants from the N.-W. P. and Oudh. Thus in the census report for 1872, we are told that the Koormees in the Nerbudda valley estimated to number 203,811 souls "are emigrants from "Upper India: and the Koormees of the Vindhyan Range "estimated to number 50,000 souls, are said to have immi- "grated there from the Doab about 250 years ago. In the "Nerbudda valley districts of Jabulpore, Hoshangabad and "Nursingpore, the Koormees again amount in round numbers to "50,000 souls. In the settlement report of Hoshangabad "there are said to be three classes of them, the Chanria "Koomrees professing to have come originally from the "Gwalior country, the Bundlecundi Koormees from Bundlecund, "and the Pardesi Koormees from Oudh." So too the Lodhis of the Saugor, Jabulpore, and Dumoh districts numbering 222,493, are said to have immigrated into these districts in the time of Aurungzebe; Rajputs, Goojurs, Kachhis, Ahirs, and other good cultivating castes are also to be found in large numbers, all of them immigrants from the Gangetic valley or Central India.

The real causes which have led to the comparatively slow colonization of the Nerbudda valley and its present inadequate population, are recorded in the settlement report of the Narsingpore district and they are causes which have operated and still operate to a greater or lesser extent over the whole of the Central Provinces. "At first sight, it "must seem singular that a given area in this magnifi- "cently fertile valley should only support one man, when "in the sandy plains of Upper India the same extent of "land affords sustenance to three or even four. But it must "be remembered that the Nerbudda valley is to all intents "and purposes a new country which has only been re- "claimed from forest within the last two or three centuries. "Little by little the body of agricultural immigrants have "grown and spread until the whole valley has passed into their "hands. But the same difficulties of communication which "for so long formed a perfect barrier round the valley have "operated under more favourable circumstances to isolate "it from external influences. There has been little or no trade "and therefore no inducement to congregate in towns. The "soil is so bountiful that no exertion is needed to secure an "ample return from it; but the means of carrying off the "surplus produce have been so deficient, that it has attracted "but little external demand. In short the inhabitants may be "few, but the land asks little expenditure of toil in return for a "yield more than ample for local wants; and external require- "ments have only now begun to raise up a demand which must "surmount serious obstacles, both natural and artificial, "before it can bring about a higher developement of "cultivation by increasing the agency employed in the pro- "duction of food grains."

What advantages then are to be gained by importing men of these castes from Upper India? Were the cultivators now in the Valley aborigines, Gonds, Bheels, or Koorkoos, whose only implement of husbandry was the axe, and *Dha* cultivation the only known method of agriculture, the advantage to be derived from the introduction of skilled cultivators would be patent. In the present instance such is not the case, and the advantages are not by any means clear. Is it supposed that the cultivators of the Nerbudda Valley have lost the enterprise which marked their forefathers; or that the traditions of their agriculture, or the strength of their hands, has degenerated so as to unfit them to cope with the forces of nature; or that they are so poverty stricken as to be unable to find the capital necessary for tilling the soil? If so it would be wiser to aim at their regeneration by the introduction of improved methods for agriculture, the establishment of Superintendents of Encum

bered estates, and liberal advances on the Tuccavi system. Were this done, it might be found that the attraction which it is desired to establish was already in existence and that development of the existing attractive force was alone required. Again are there no dispossessed landholders in the Nerbudda Valley, no landholders of old standing overwhelmed by debt who would gladly move down the valley to settle on virgin soil lightly assessed: no industrious cultivators dispossessed from their holding by a grasping landlord or pitiless creditor, ready to follow some well known local landlord?—If such there are, and those best acquainted with the Valley know the ruin which has there of late years overtaken many of the cultivating classes, then surely these are the men to colonise the Charwa jungle, if it can be colonised. They will be saved the necessity of emigrating into Gwalior, Indore, or Bhopal territory, and every advantage derivable from the present scheme will be secured. Whether such a scheme is feasible at all may be questioned, but the success of the present one is most problematical.

The third principle may be a sound one but the reasons given for its assertion are somewhat curious. If emigrants can be obtained with greater ease, for places only 2 or 3 days journey from home, than for a long journey by land and sea, it may be argued that these emigrants will also be more ready to desert under adverse circumstances; that they will not feel the stern necessity of making the best of it, and might be too readily inclined to indulge in short but exceedingly expensive trips to their homes, and their relations. When disheartened by bad seasons, disgusted by a demand for rent, or by the solicitations of creditors, the emigrant to Assam, Burmah, or the Mauritius feels he must make the best of it, and cannot run away. By the present proposal he is positively invited to desert when overtaken by these difficulties; and if any part of the Rs. 200 advanced by Government remains to be refunded, he will not leave such balance behind for the benefit of his persecutor. Is it really believed that such events will not occur?

The last principle—that it should be made thoroughly worth the while of the colonists to come—is the most important of all; and being so, it has to be considered whether the inducements are such as would tempt any reasonable man. There are to be 10 villages of 50 families each; each family on an average containing 4 persons or 2,000 souls in all. These 2,000 persons have to be collected say at Allahabad from parts of Oudh and the N.-W. P.; and fed in most instances until they reach Allahabad, from districts like Gonda, Goruckpore and so on. They are then to be conveyed by rail some 500 miles at Government expense. Advances are to be made to enable them to build huts, buy tools, ploughs, plough bullocks, carts, seed, dig wells &c., and they *must then* be supported until harvest, probably for a full year, until the struggling colony takes root. Can it be conceived that a, lakh of rupees will really cover all this expenditure: or that Rs. 200 will suffice for the conveyance and establishment of each family? Or is it expected that the cultivators will have some ready money, which will relieve the expenditure necessary for its scheme? If such expectations are entertained they should be at once rejected, the only sound basis for calculation being to consider that the colonists have nothing, or that if they have they will certainly not stake it.

Acting on this estimate, the calculation by which Rs. 200 is to pay for the living of four persons say from some part of Goruckpore or from the interior of the Allahabad district until they reach Allahabad; pay their Railway fare to a station beyond Hurda; supply implements to clear the jungle, build huts to plough the land: sow the seed, dig wells, harvest their crops, and in the meantime to support them for a year and perhaps for more—must be one of the most curious specimens of arithmetic. But even when all this is taken into consideration, something more remains. The leader of each band, the member of the "old dispossessed landed class" (not to be found in the Nerbudda Valley?) is to have Rs. 200 for himself and family. Thus at the outset, no more inducements are offered to *him* to emigrate, than to the ordinary colonist. If he accepts and perseveres, he may in time attain the proud position of village manager and get 5 per cent. of the area rent-free for ever. If then each of the 50 families including the leader in each village, brings into cultivation a rateable portion of land, it is clear that the head of the village only clears 2 per cent. of the total area and the other colonists must among them contribute some land, it may be 3 per cent, of the total clearings to make up the "leader's" share. Is it likely that any cultivators would consider such advantages sufficient to justify them in trying the experiment? For securing emigrants of the right kind, there is great reason to doubt whether these advantages are sufficient. As regards the *locality*, it need only be remarked that it is notoriously unhealthy; and that previous efforts to colonise, and to bring it under cultivation, have failed. This being the case, it is surely unfortunate that such a spot should have been selected for the experiment. Admitting that the emigrants can be secured, is it not certain that they would become disheartened by repeated attacks of fever? And any mortality from this cause would probably result in a general stampede. The conclusions we arrive at are therefore, (1) that the class of cultivators whom it is desired to introduce are already in the Hoshungabad or adjoining districts, and that to import them from the N.-W. P. and Oudh is an unnecessarily expensive proposal; (2) that the inducements offered and the sum proposed to be expended, are inadequate; and (3) that the locality being an unhealthy one is not adapted for the proposed colony. But there is a more important consideration than all yet to be noticed. We defer its consideration for our next issue.

RURAL CELEBRITIES, BENGAL;

The Chowkeydar.

In a village honored with the residence of a European Indigo Planter, this gentleman is of course the magnate of the place, and commands unbounded local influence. Master of the broad acres that yield the imperial dye, his prestige is supreme. He is the *sahib*, and rules the destinies of the surrounding population. In the majority of cases, it has cost him a mine of money to create this influence, standing where he does, and where formerly he had not a rood of land to call his own. Has he not sunk thousands in constructing his masonry vats and factory, and in building the mansion and its well-laid-out grounds, whose elegance and neatness the zemindar has unwisely not yet learnt to imitate. The morning sun sees him early at work riding on his "grey," and the afternoon finds him in his cutcherry, hearing complaints and settling disputes and directing the work of the factory. But you will, nevertheless, find him snatch some moments for the sick, for he is an adept in the healing art and has a reputation miles around. In spite of all, however, he is a fear to the ryot, whose best lands he has taken for the dye; and to the zemindar who has given him his lease; for he is always at law, always impounding cattle or sowing *chur* lands that are not his; always energetic, always aggressive, always feared and always disliked.

Superior to the planter, when measured by his interest in the land, is the zemindar. The education he has had is very limited. He is a late riser; and confides the entire care of his estates to others generally to some ancient servant of his father. The khomar or *nijjot* lands, which under the safe-guard of the old regulations he should himself have cultivated for the maintenance of his family, are tilled by others, and having lost the husbandry of the land he looks simply to his rents and never dreams of any improvement of the estate. As the law has curtailed his ancient powers moreover, he underlets the land and creates subordinate tenures at a fixed permanent rent, and thus sinks into an annuitant upon his own property. He is very commonly an absentee, never concerning himself with the condition of his ryots, or communicating with them except through his subordinates. The under tenure-holders, again, are speculators, who increase the burdens of the ryot, the rent being enhanced by every middleman put over him. The small talookdar who holds direct from Government, or pays his revenue to the treasury through the zemindar, deserves a passing notice. Originally occupying the position of *gantidar* or *jotedar*, the Permanent Settlement made him independent, and his tenure has remained undisturbed since. He personally collects his own rents, and is in communication with his ryots every day, who are generally attached to him. The number of such holdings is unfortunately not very great, but wherever they exist the ryots are comparatively secure. The middleman is created by the zemindar transferring his rights to a subordinate holder, either in putnee or mourasi tenure, the

holder of which tenure may in his turn if he chooses, create a dur-putni or a dur-mourasi, and thus multiply the swarm whose sole object is the enhancement of the ryot's rent. The entire class is the creation of our rule, and are looked upon by the ryots as interlopers, whose demands they can satisfy only by abandoning ancient, dearly-cherished rights.

We have now named the most important of the rural aristocracy of a Bengal Village, but there are other people of mark of whom we must say a word or two. The mahajun first of all, then plays a conspicuous part in the system. He is the money-lender, and draws to him all who are in need. His influence is often very great, and while to the superficial he is simply an unmerciful screw, the assistance he renders the people in times of distress is very real. Then there is the gomashta or tehsildar, the rent collector, upon whom the ryots seldom look with a favorable eye. Perhaps it was never otherwise, but as the ryot is learning independence he shows a front to the gomashta where formerly he would have succumbed. If the *gomashta* is a native of the village itself, of which he has the charge, the zemindar can place little reliance upon him, and can seldom safely consult him unless he wishes all the village taken into his confidence. But the landlord who has the welfare of the ryot at heart will, nevertheless, always employ a native of the village as his agent, as the latter can accomplish by persuasion what no decree of the courts will bring about. The *mathubur*, again, is an important personage in the village community. He is chosen, or rises to be mathubur by circumstances, and with the tacit consent of all parties. He is the ryot of influence, and becomes the general referee in all disputes. He may not be alone in this post of honor but have others associated with him, bearing the same honorable title and working together for the good of the village. The mathuburs should be treated with consideration for their value in an administrative point of view. There is no other rural agency in Bengal which could be so usefully employed, and they should look after the village *chowkeydar*, and see to his being regularly paid. They should distribute medicines in times of sickness, and supply the Government with the statistical information it so much desires. The Mathubur associated with the indigenous school-master as his accountant and scribe, and the chowkeydar as his executive, would make an efficient village *trio* through whom much could be done that we desire.

We have reserved the *chowkeydar* for final notice. He is the village watch, but years of neglect and of contempt have degraded him hopelessly. He does much that he is never requited for while his pay is always in arrears. His position will now be improved, and the chowkeydar treated with the consideration due to an office that has outlived the revolutions of ages. For the introduction of the new chowkeydari law is likely to create a great change in the village life of Bengal, from the alteration in the position of zemindar and ryot, which must be the consequence of its working. Hitherto all public duties of an honorary nature have been imposed on the zemindar. The new Act now creates a body of officers. who will by their numbers enjoy great power and influence and will be almost all ryots. Every village will have its group of headmen who will be exclusively responsible for the collection of the tax which supports the chowkedars, and for the punctual reporting of crimes, and they will have two definite functions in the discharge of which they will be supreme. In the first place they will assess the tax, and realise it if necessary, by the attachment of the defaulter's goods and in the second place, they will have the control of the whole chowkeydar force. The Act is now being put in force in almost every district. Magistrates are engaged in appointing the headmen and explaining to them their duties, and before the end of the year the measure will be in full working order everywhere. No one can fail to see that this is a decisive step towards reviving that village life which was once the keystone of Indian rural society. In Madras and the North-West we have retained the institution. In Bengal and Oudh we trampled it under foot.

In ancient times, the village watchman was maintained by the village community in which he lived for the protection of their property and persons. But he was nevertheless really a servant of the State. For he was not constituted watchman by any private compact between himself and the villagers but was appointed by the latter on their corporate character as a State institution. "It cannot be too emphatically maintained, that "the village watchman from the earliest times, was a public servant "holding his office under the Government of the country, whatever "form that Government has from time to time assumed." Under the Mahomedan rule from Akbar to Arungzebe, the villagers lost their municipal character and became a collection of individuals, subjects of the State, while the watchman became merged in the general zemindari establishment, employed for miscellaneous purposes of civil administration although still servants not of the zemindar but of the State. During the break up of the Mahomedan rule 1690—1765, the status of the zemindar underwent a change. From a great public officer with trusts to discharge, he became a farmer of the revenues in his charge, but with the civil administration still on his hand, Lord Cornwallis finally converted him into landlord of the zemindari in his charge, and made him responsible for the police administration of his estate. His establishment then consisted of a standard series of officers. (1.) Dewan or Naib of the whole establishment. (2.) Itmamdar or Backdar for each pergunnah (3.) Goomastahs over each tehsil. (4.) Mundul or Putwari of each. village. (5.) Village watch. The main business of these establishment was the collecting the rents : but incidentally the duty of protecting the persons and property of the people. By the Decennial Settlement, these establishments became as it were personal dependents and servants of the zemindar though still having public duties to discharge. In addition to these establishments there were certain semi-military forces for defence against external aggression and internal disturbance at their disposal. The ghatwals of Ramghur, Beerbhoom and the jungle, mehals the paiks and sowars of Midnapore and Kuttack, the Nugdee troops of Burdwan a regular thanadars police in the Burdwan, Moorshedabad, Nuddea and Beerbhoom estates The whole of these zemindari establishments were as a rule maintained by the assignments of lands, held by them in the double capacity of public officers and landlord or farmers of the rents. Their double capacity was largely reduced however by the great reforms of 1793. The system of 1789 under which the police administration was left in the hands of the zemindars broke down instantly, and the zemindars were found to be themselves the author of half the crime in the province. Three years experience determined the government to put an end to it, and Regulation XXII of 1793 the government took the police administration into its own hands and the zemindari establishments which had avowedly been maintained for police purposes only, were abolished. The services of the village watchman alone were not dispensed with, but were transferred from the zemindars to the regular police establishment under the orders of the Government. Section 13 declared all paiks, chowkedars, &c., subject to the orders the newly appointed darogahs under the rule of the zillah magistrates. We have now made a radical change of system and the village watch will become once more a part of the village commune.

THE BONN CONFERENCE.

AMONG the remarkable ecclesiastical phenomena of the time in which we live, one of the most interesting and significant to a sympathetic observer, is the strong desire for union manifesting itself in more or less vigorous action in almost every section of the dismembered visible church. Ecclesiastical schism, and the fierce conflicts of Orthodoxy and Heterodoxy, have been the most serious evils in the Church of Christ, and have furnished the sharpest weapons of attack in the hands of her enemies. That disputes, secessions, and even persecutions, have often been productive of good as well as of evil, is no defence of disunion among the members of the one body of Christ. To those, therefore, who hope for the final trumph of Christianity over the world, and desire the harmonious co-operation of the churches to attain that end, this growing fermentation, this yearning for closer fellowship, so conspicuous at the present day must possess a deep interest. However, feeble, however partial, however misguided it may in some instance appear, it may nevertheless be the little leaven which shall leaven the whole lump. Among the various movements of the kind worthy of careful observation, there is none that appears more significant than the "old Catholic" movement. The separation of those who are so called, from the Church of Rome was not a schism in the ordinary sense. Dr. Döllinger and those who hold with him, are not schismatic, but are, the real representatives of the old Catholic Church. They are excommunicated, not because they have introduced any new heresy into the Church, not for denying any dogma which the Church has always taught, but because they refuse submission to the famous decrees of the Vatican, which have recently exalted the Bishop of Rome into the infallible mouth piece of God. They did not voluntarily leave the Church even though this infallibility was claimed by the Pope and acknowledged by a large party in the Church. They chose to remain in it, and to combat the new teaching in the light of historical truth with the great learning and ability of which they are undoubtedly possessed. But this did not suit the policy of the Pope and the powerful party who have him in their hands. Infallibility, from being an open question, is made a dogma, and when the old Catholics refused to acknowledge

what they knew to be a falsehood, they were visited with the major excommunication. In the splendidly audacious policy of the Vatican, which has astonished and perplexed Christendom, the expulsion of the Old Catholics was perhaps the one act which will eventually prove most suicidal. Dr. Döllinger and his supporters left the Roman Communion with the applause of all impartial men, and their singular position has invested their every act and utterance since expulsion, with an interest for Christendom which all their erudition and pious earnestness would not have won for them had they been tolerated and remained in the Church. And now we see them stretching forth their hands to the east and to the west, in a noble and Christian like endeavor to draw together in fellowship some of the most important sections of the visible Church. The late Conference at Bonn in the month of August, we look upon as one of the most important ecclesiastical gatherings of modern times. Dr. Döllinger of course presided, and there were present distinguished representatives, not only of the Old Catholics of Germany, but of the orthodox Greek Church and of the Episcopal Churches of England and America. Their aim was not to seek conformity or corporate union, which must be distant, if attainable at all, but intercommunion and fraternal fellowship—the acknowledgement of one another as true representatives of the Primitive Christian Church, and an explanation, as far as might be, of the differences that have kept them so far apart. To an outsider, perhaps the must hopeful feature about the Conference was the genuine kindliness and mutual forbearance which seem to have marked the proceedings throughout. Theological discussions have too frequently been notorious for the acrimony with which they have been conducted, but in this case there appears to have been a real desire to arrive at an understanding of their difficulties. At the same time, the calm moderation of their aims, not striving to achieve every thing in a day, but patiently talking matters over and over thankful when even a little headway was gained, seems to in dicate the calm deliberation which is the attribute of strength and the promise of ultimate success. To those of us who are more familiar with secular studies, and to those especially, who have no clear conception of theology as a science, it may seem at first sight, that the time and learning of the Conference were wasted upon a discussion about words that have no corresponding meaning and that these erudité ecclesiastics did little else than sharpen their intellects upon incomprehensible theological subtleties. Some of our readers will be apt to come to such a conclusion if we state that the principal subject discussed was what in the language of theology is called "the Procession of the Holy Ghost." But when we recollect that this was the point of dissension between the Eastern and Western Churches, and that a difference of creed on the subject is the great hindrance to inter-communion between the Anglican and Greek communities, it will be recognised as being of no small importance, that the Conference discussed the difference in a friendly and brotherly spirit and finally arrived at a mutual understanding. It would be out of place for us, even if we could, to enter upon a discussion of this mysterious subject. It has always been the contention of the Greek Church that the introduction of the *filioque* clause into the Nicene creed, and so into the litany of the English Church was without authority, and moreover covers a heresy. The Eastern Church believes and teaches that the third person of the Trinity "proceeds from the Father alone," whereas the Western Church by her formularies declared that he "proceeds from the Father and the Son." That the *filioque* clause was added to the Creed in an irregular manner and without Œcumenical authority, was readily enough admitted by the Old Catholics and the Anglicans. It was authorized indeed by papal authority, but the power of the Pope to sanction a change of creed can only he acknowledged by the supporters of the dogma of infallibility. On the question of ecclesiastical authority, there was therefore no dispute; but the Eastern Church further contended that the *filioque* clause covered a heresy, in as much as it implied that the Father was not the sole principle or fountain of Deity, and thus infringed the doctrine of the unity of the Godhead. Here lay the real matter of controversy, and it was after five days' keen but amicable discussion that both parties in the Conference arrived at the conclusion that under a varying phraseology they really meant the same thing. The quarrel of centuries was acknowledged to be—a misunderstanding about words. Our theological readers, are not numerous enough to justify our publishing the six theses accepted as settling the discussion. The great wall of partition between East and West being thus removed to the satisfaction of the members of the conference, it of course remains to be seen if the Synods of of the Greek Church will accept the explanatory theses. Even should they not immediately do so it will yet be a matter of importance that representative men of these Churches have met together as brethren, and, after a careful and protracted discusion, arrived at the conclusion that there was no real difference of doctrine among them.

Another objection from the side of the Greek Church to intercummunion, seems also to have been satisfactorily answered by Dr. Döllinger; their objection, namely, to the validity of Anglican Orders. This is a question on which we need not remark. More interesting is a statement by Dr. Döllinger on the subject of Purgatory, which appears to have caused a considerable sensation in the Conference, and which may lead to fresh discussion in other quarters of the much abused doctrine of the Intermediate State. The Romish doctrine of Purgatory, which is now repudiated by Döllinger, exercised a very strong repulsive power on the reformers, and drove them not only to a denial of that doctrine, but to ignore every expression in the Bible which seems to imply the existence of an intermediate state. The Greek Hades is by our translators invariably rendered by the word Hell, and this, as is well-known, is not the only instance of forced translation arising out of a strong repulsion from popish doctrines. Whatever the truth may be, we cannot doubt that this subject is one of those to which, if we may so express ourselves, our theologians have generally given the go-by, and we are of opinion that Dr. Döllinger has put it on a platform where it may, and ought to, be discussed without prejudice. He denies *in toto* the doctrine of a place where souls are purified by material fire. The material idea he declares to have been first introduced by the, Germans and Dutch. But we had better quote the abstract of his speech which is before us:

"It must first be noticed that it was only amongst the Germans and Dutch that the common expression (*Fegefeuer*—cleansing fire) introduced the idea of a material fire. It was not necessarily contained in the world *Purgatorium*. The ancient Church knew nothing of a purgatory, and the first to introduce and fix the opinion in the West was Gregory the Great, in the year 600. The belief of the ancient Church was, that after death those who were not ripe for the Heavenly Kingdom, were kept in an intermediate state (Hades) where they were gradually purified and prepared for the fulness of blessing, and that prayers for them in that state were of benefit. All this was only a widely spread opinion, and was not contained in any settled articles of faith. The new doctrine that spread in the West was of a fixed place, where souls were purged by material fire, and where prayers offered for them shortened this fiery ordeal. In the thirteenth century, the Schoolmen manufactured this material conception into an article of faith; and in the beginning of the fourteenth century, the doctrine of Papal indulgences, as a means of deliverance from Purgatory, was spread. The abuse grew and increased, until in this year of grace, 1875, we have a grand jubilee year of indulgences, in which the Pope may clear out Purgatory altogether perhaps. The Pope's triple crown is now justified. He is supreme ruler over three kingdoms, the kingdom of heaven, of earth, and of the world of spirits. You may go, for example, to certain churches in Spain, which are privileged with indulgences, and there you may see written on the doors, 'To-day, you can bring souls out of Purgatory.' We, Old Catholics, utterly repudiate this doctrine. We abjure the whole system of Papal indulgences, whether for the dead or the living, and we believe what the old undivided Church taught about the middle state. We do not attempt to define that state, but we pray to God for the welfare of those that have entered it."

It will be seen that the Old Catholic movement has developed into an earnest struggle to get back to the ascertainable faith and teaching of the ancient undivided Church. It is unquestionably a movement in the right direction, and so far all must sympathise with it, and in its efforts to purify its creed and form fraternal relations with other bodies, bid it God speed. It may be, and certainly is, the opinion of some that it ought to go still farther back and rest its teaching on the basis of the New Testament alone. Till that is done intercommunion among the whole body of Christian believers will be impossible. But every step in the right direction ought to command our sympathy and we have no doubt that Dr. Döllinger and his party have rendered an invaluable service to the Universal Church of Christ.

HERZEGOVINA.

THE attention of Europe is at present fixed upon the insurrection in Herzegovina. The "sick man" is so very sick that every shock given to his enfeebled frame threatens to shake him into a dozen different pieces, and the "Great Powers" in his neighbourhood are naturally on the alert to scramble for the fragments as they fall. The province of Bosnia is situated at the south-east angle of the

Turkish Empire, and has been termed by M. Elisee Reclus, in his admirable "Nouvelle Geogrophie Universelle" (to which book also we are indebted for the particulars which follow), the Switzerland of Eastern Europe, a Switzerland, however, the mountains of which do not rise into the regions of ice and perpetual snow. With the exception of some Jews, and a few Turks—functionaries, soldiers, and merchants—who live in the more populous towns of Bosnia, nearly all the people are of the Slavic race: the inhabitants of Herzegovina, the southern province of Bosnia and the theatre of the present trouble, universally so. But though the people of Bosnia are one in origin they are divided in religion, and in this fact of religious division lies the cause of their political servitude. At first sight it strikes one as unaccountable, that the Slaves of Bosnia have not succeeded like their brothers in Servia in liberating themselves from the Ottoman yoke. They are at a far greater distance from the capital of the Empire, and their mountains are far more difficult of access than the plains of Servia. Their entire country may with truth be likened to an immense citadel, the highest wall of which faces exactly southward as though to forbid the approach of the Osmanlis. Supposing that rampart surmounted, it would be then necessary for an enemy to fight his way through a narrow and difficult country, where at a thousand places a few determined men could stay the march of an entire regiment. The climate itself one would have supposed ought to have acted as a bar to Turkish dominion, for it is far colder and more rigorous than in the rest of the Peninsula. But yet, despite the advantage of soil and climate as a means of defence, all attempts to throw off the Turkish yoke have failed miserably. The reason is not only that the Mahomedan and Christian elements are bitter enemies one of the other, but that there is no unity among the Christians themselves. They are divided into Greek Christians and Romish Christians, and, blindly led by bigoted and ignorant priests of both communions, they hate each other hardly less than they hate the Turks.

The Mahomedans of Bosnia, who style themselves Turks, are not less Slaves than the Christians of the two communions. They are the descendants of the nobility, who at the end of the fifteenth and commencement of the sixteenth century became Mahomedans in order to preserve their feudal rights and privileges. Amongst their ancestors the "Turks" of Bosnia reckon also a number of famous brigands, who were eager about the same time to change their religion in order to pursue their profession without molestation from the authorities. Any one familiar with Mahomedan history knows that "brigandage" has always been a recognised and honored profession among the faithful. For many years after his flight to Medina, the Prophet was what we should term a robber chief; and in the light of such an example, the trade though it involved personal danger, has never been held to affix a moral stigma. Provided a Mahomedan robber pillaged Jews and Christians only, he was in truth "fighting in the path of God," and carving his way to Paradise. Finally, the personal attendants upon the feudal chiefs were converted by force.

This apostacy gave to the feudal aristocracy a larger measure of authority than even that which they had exercised previously. Caste hatred being supplemented now by religions they even surpassed the pitiless fanaticism of the genuine Mahomedans, and reduced the cultivating classes to a state of veritable slavery. The Mahomedans of Bosnia form at present the most retrograde element in all Turkey, and more than once, notably in 1851, they have actually revolted against the Government of Constantinople in order to maintain in its full violence the old feudal tyranny. As is the way with all perverts, they are more Mahomedan than the Sultan himself; and, in their intense hatred of the Christian population in subjection to them, they have by degrees constituted themselves into a State within the State, at whose portals the decrees of Constantinople knock in vain. At present the number of Mahomedans is about one-third of the population of Bosnia. It appears that the Mahomedan population remains stationary, or, as some authorities assert, actually diminishes, while the number of Christians continually increases.

The agricultural Christian population are compelled to labour for their Mahomedan masters not as serfs, but as day laborers. Sometimes they are paid by the piece, but the most fortunate are those who are admitted into a sort of part proprietary, though these again are burdened with so many additional demands on the pretext of the advantages they enjoy, that their good fortune is at the best of a doubtful kind. For the rest, the state of the country is as bad as it can well be. Incessant wars and ruthless oppression have barbarised the people. Roads there are hardly any, the forests and rocky solitudes have cut off the people from the genial influences of civilisation. The only schools which exist in the country are those which are maintained here and there in the convents. But as the monks are themselves steeped in ignorance to the lips, it is little they can impart to their pupils beyond their own theological bigotry and superstition. Sunk in this state, the wretched people are driven to seek in intoxication a temporary oblivion of their woes; and a strong brandy distilled in the country is, it is said, a potent agent in supplementing the corrupting power of Mahomedan rule.

Bosnia in a word is but one more illustration of the old monotonous story which history repeats in every country where the "religion of the Prophet" has prevailed. Look at the Mahomedan world at this day. Is there a spark of hope to be seen, are there any of the elements of progress to be found in any part of it? The whole head is sick and the whole heart faint; there is no soundness in it, but wounds and bruises and putrifying sores. And these results follow as inevitable consequences from the doctrines of the Prophet. But historical students of the present day have been slow to perceive this because a vivid sense of the evil of religious intolerance has carried them away into an equally harmful toleration of what is clearly and unmistakeably bad. People talk about the incompleteness of human knowledge as though there were no matters whatever on which absolute assurance was to be had. There are such nevertheless, and among these undoubtedly is the fact, that wherever the Mahomedan religion prevails there is decay, stagnation, oppression, a constant gravitation towards a deeper depth of barbarism.

The Mahomedans of the North-West have succeeded we see in getting their college opened at Allyghur. It is a success to be profoundly regretted by every well-wisher of India. People's minds are strangely blinded about such matters. Lord Northbrook, Sir William Muir, and other English officials would hardly take part, either directly or indirectly, in the formation of a college for bringing people up in the belief of the old Greek religion. Why then for Mahomedanism? If we measure the value of the two faiths by what they have done for mankind, the religion which gave us Homer and the Greek tragedians, Socrates, Plato, Aristotle, and all the marvels of Greek art, is beyond all comparison the higher and better of the two. If the Mahomedans of India wish to found colleges for themselves, they have an undoubted right to do so; but we are guilty of practical falsehood when we look kindly on such projects, and abdicate our legitimate position as the leaders of thought in India, not less than as the officials of English administration. Mahomedans, naturally enough, think that a great Mahomedan revival would be a grand thing for India, but we know that it would be the greatest of all curses, and it would, be more honest as well as more politic to avow this openly. We act as though we did not think so, when we subscribe to Mahomedan colleges. To return, however, to the troubles in Herzegovina. When they first broke out, the Porte, after its manner, hastened to assure Europe that the affair was of no consequence whatever; they would put it down in a short time and without trouble. The three Powers nearest to Turkey, Russia, Austria and Germany, declared that the business was entirely an affair of Turkey, and that they did not intend to interfere. The *Times* exulted in these declarations, in a truly characteristic article addressed to the insurgents. It acknowledged they had grievances, great wrongs in fact, but what then? They must learn to submit patiently. There was not, the *Times* knew, any hope of redress or amelioration in the Turkish administration, but, on the other hand, were these misguided people aware that by their foolish impatience they were opening out the great Eastern question," when no one was in the least prepared with a satisfactory solution? They were threatening to embroil all Europe by reason of their culpable sensitiveness under Turkish misrule. We do not know if these remonstrances reached the insurgents. At any rate they disregarded them. The great "Eastern Question" is precisely the question which they demand shall be opened without any further delay. As to the progress of the insurrection it is difficult to get any accurate information. The telegrams are a series of bewildering contradictions. But one thing is certain—that the troubled area is extending on all sides, and Montenegro and Servia are burning with eagerness to strike in on the side of their oppressed brethren. Servia, as we have said, is peopled by the same races as Bosnia and Herzegovina. They have groaned under the same burdens; and the advances they have made in prosperity, in civilisation, in orderly and constitutional government, since they conquered their autonomy, show the progressive capacity latent in the degraded population of Bosnia could they rid themselves of the Mahomedan incubus. The insurgents appear to be badly armed, insufficiently provisioned, and without regular leaders. But they have a country unrivalled in its capacities for guerilla war, and

are dealing with an enemy sure to be mis-handled in every conceivable way. Left to itself, there can be no doubt that the insurrection would be successful. Servia and Montenegro would strike in, and the three provinces would form a Slavic confederation independent of the Turkish power. Nothing is needed on the part of the Great Powers but an honest observance of that neutrality they are so loudly professing. This, we fear, is just what it is idle to expect. The moment is not considered opportune, and Germany, Austria and Russia are directing their endeavours to confine the insurrection within as narrow limits as possible. Servia and Montenegro are to be coerced into not aiding the insurgents; the insurgents are to be wheedled into quiescence by a delusive promise of administrative reform; and so the evil day will be staved off, the integrity of the Ottoman Empire preserved a little longer. This procrastinating policy is melancholy under every aspect —not merely as consigning the present generation to a life of hopeless servitude, for reform in Turkey is as much out of the course of nature as snow in summer; but because every delay renders in the end the process of regeneration so much more doubtful and difficult. The work of corruption in Mahomedan countries is done so thoroughly, that the recuperative power is in great danger of being destroyed altogether. Servia, it is true, escaped while yet there was time, but Bosnia has descended to a lower deep than she had ever sunk to, and of course every delay in the hour of emancipation renders the problem of recovery increasingly difficult.

THE RISING GENERATION.

THE amazing precocity of Anglo-Indian children was well hit off by the late John Lang in his novel of the Wetherbys. The infant heir of Captain Wetherby, on being refused something by his grandmother—an estimable old lady in an English country house—launches a torrent of the most abusive Hindoostani at the dame's grey head, cursing his father and mother at the same time with a volubility quite becoming so promising an urchin. Ill weeds grow apace they say, and it is doubtless to the climate, in a measure, that we are indebted for a precocity that flourishes thus rankly, and which at times is productive of no little social inconvenience. The *enfant terrible* has opportunities of annoying people in India, which are happily wanting for him at home. The necessity of keeping him indoors all day, gives him eight or nine hours wherein to do all the mischief of an infantile Puck, and, to do him justice, time is not thrown away upon him. He is to be seen industriously undermining the walls of the house, and swallowing the chunam in their composition; or he is busy with the circulating library books, abstracting the illustrations therefrom, and tearing them in pieces. All the time he is rendering day hideous with his clamour, but this is better than silence. If there is no noise his mamma is alarmed, for who can say what his occupation may be when it is so naughty as to entail the necessity of silence. To the visitor, a child like this is intolerable. The morning caller has got himself up regardless of expense, to look his best in the eyes of Mrs. So and So, and has bravely encountered the heat of the day in order to enjoy a pleasant verbal flirtation with this interesting infant's mother, when lo! the infant himself. The brat continuously interrupts the conversation, now sprawling upon the floor with such an exposition of person as calls for arrangement of his frock every minute; anon breaking into piercing cries which must be hushed at the maternal bosom, or he causes consternation by threatening the safety of every table ornament within his reach, and of some beyond it. There is no keeping him in check. The Indian child laughs at the Bugaboo, and the awful man with the Bag, who is the terror of his little brothers and sisters in England, and such is his audacity and recklessness of consequences that we veritably believe the sight of a sweep would affect him but little, though, to be sure, he is well accustomed to dark complexions. He hectors the ayahs and servants. He causes them to crouch before him, and has an unhappy knack of disclosing the confidences and conversation of these abject creatures in polite society, in a way that calls for the frowns of his parents, the blushes of the maidens, and the suppressed mirth of the rest of the company. Altogether the Indian child is a very dangerous plaything at the best of times, and those that don't want to be made to look like fools, had better avoid his company and conversation as much as possible.

It is a most singular thing that the rising generation of any period should always be in a position to look down upon their parents, and their parents' contemporaries, as fogies and slow coaches. We, who are middle-aged now, were rising once, and thought the "governor" greatly out of date, just as our own boys regard us as "ancients" and Methusalehs. None the less do we admire the precocity of the young people who will take our places in the world thirty years hence, and who appear to have sprung suddenly into existence, armed with all the wit and wisdom in their childhood that it took us well nigh forty years to acquire with all the labor of experience. Here are these Indian children under seven, going to dances, and waltzing like Hussars and ladies of the demi-monde; giving pic-nics among themselves, riding races on their ponies, dressing in the fashions, and putting their parents to shame with their extraordinary knowledge of the world and its ways. Has the age of old heads on young shoulders at last arrived, we inquire of ourselves? But then comes the reflection that it has always been the same, and that twenty years ago, John Leech was drawing his charming sketches of the precocity of a generation that has now a rising generation of its own. It may be, however, that the highly stimulated intellects of the parents of the day are reproduced in the small craniums of their descendants; in which case we shudder for the small boy when he comes to man's estate, and finds the world more stimulated and stimulating even than it is at present.

Considering the *enfant terrible*, as above mentioned, it may look ironical to congratulate Indian mothers upon the blessings they enjoy in their children; nevertheless a child is an inestimable boon fer the English woman in India, for children alone can afford her adequate occupation and amusement together. There are few women who do not love their children with a fondness surprising to men. It is only those who are wedded to folly or vice that neglect their little ones, and hand them over to the charge of ayahs and peons—to learn, poor little things, more evil under such guardianship than the British schoolmaster will eradicate with years of the rod, by and by. Generally speaking, an Indian mother loves her children with a love exceeding that of other mothers—probably because a woman's love increases with the drafts that are drawn upon it. And the Indian child does not regulate his cheque book on that beneficent bank very methodically. What with the thousand ills that baby flesh is heir to, as well as the everlasting tumblings, stingings, bitings, and stomachic misadventures to which the child is liable, the mother had need of an inexhaustible stock of love and patience, to carry her through it all; though, strange to say, she finds a pleasure in all this trouble. She has her reward in her duty, and is much less to be pitied than the mother who has no children to look after, and who is consequently compelled to waste her affections upon real dogs or sham puppies.

The rising generation about us is no less interesting as a nursery study of the men who will probably succeed us in the administration of this great country. What manner of men will they be—these brats their parents design for the Civil Service and Army of twenty years hence? Will there be either Army or Civil Service in the year 1895, nay, will there ever be any such year at all? These small boys are the tickets in the great speculative lottery of the future, and we can only hope that they will turn up prizes for their own sakes. It certainly will not be for want of astuteness if they fail; for the child of this period is preternaturally smart, and appears to be born with his wise teeth ready cut. We observe his precocity in his toys, and picture books. The old Baa sheep, and the wood engravings of Mother Hubbard won't do for young master or young Miss to-day, at all. They must have mechanical and instructive toys that go by steam, and stereoscopic slides and tinted photographs to make them amused. Their stories must be of the world, worldly, or they yawn over the improvisatoire, and for the little girls, one must dilate on the wedding dress of the bride, the price of her lace, and the shape of her slippers. It is not the cap that these little angels care so much about, as the ribbons and rosettes, but then what can we expect but a passion for costume from the children of overdressed mothers.

A good deal of pity is wasted, we think, on Indian children. They are regarded as partially baked specimens of humanity without a kick, but some cry in them. Poetical Mammas, with a longing for home scenes, and the shop windows perhaps, have written sonnets to the "Indian babe's lack lustre eye," and have recorded in print those tears they dropped on "little Arthur's pallid cheek," but it is somewhat of a delusion to say that the Indian child with his occasional trips to the hills, his enjoyments such as they are, and his playmates, is much worse off than the child at home. It is rather when the Indian child is sent to England, to the charge of advertising strangers, that the poor little dear is to be pitied: for what must the chilly English life be to him without ayahs, without curry and chunam? It is a pitiable sight to see in and about the Devon and South Coast watering places, children unmistakeably Indian and away from their parents. The Christian ladies, highly connected with clergymen, who take care of the

THE WEEK.

AMONGST the Doorga Poojah tourists commencing their wanderings in the Himalayas, Sir Richard Temple's party will not be the least adventurous. He is to travel to the frontier which separates Sikhim from Thibet, and will skirt the passes between the two States. He might possibly wish to go further, but at each pass is a guard, with orders to bar the way of all Europeans whether governors, diplomatists, or traders. As we think of our local ruler stopped by these Chinese soldiers while travelling in search of the picturesque, or to cultivate friendly relations with neighbouring chiefs, the question naturally arises:—Has a State the right to isolate itself altogether from its neighbours, declining all commercial and political intercourse with them? For eighty years the Thibetans have succeeded in preventing a single European crossing their southern frontier and penetrating to Lhassa. Huc, disguised as a Mandarin, reached the capital, but he entered from the Chinese side, and was in the end arrested and expelled. Is it not a fair subject of complaint to be thus shut out from a neighbouring country? And has any country a right thus to isolate itself from the world?

ALTHOUGH in lower Bengal the rains have been gradual and moderate all through the season, there is a general cry for rain throughout Behar, where much of the later rice has yet to be transplanted, and prospects are far from being as good as they were a few weeks ago. The *bhadoi* is happily past danger, and is being reaped everywhere, but there will be short *aghanee* and *rubbee* crops—respectively the great rice, and wheat, crops of the province—unless rain falls in the next fortnight. From the Punjab a very heavy rainfall is reported, the railway line between Beas and Umritsur having been inundated, and all traffic between the latter place and Phillour suspended. The Dehra races have had to be postponed until next week in consequence of the rain, and the opening of the Simla Fine Arts Exhibition was but thinly attended owing to the same cause, while for several days there has been an unprecedented rainfall in Ajmere. But the most disastrous accounts come from the Bombay Presidency, from Ahmedabad and its neighbourhood, where great destruction of property has taken place, and some lives lost. The flood is said to have been the greatest on record in that part of the country. The railway bridge across the Saburmuttee, a very substantial structure, was swept away bodily, and that across the Mhye was for a time in great danger. In the city itself 4,000 dwellings were destroyed, and their late inhabitants are said to be suffering considerable distress.

THE despatch from the Secretary of State formally announcing the visit of the Prince of Wales has been made public during the week. The Viceroy is asked to welcome His Royal Highness; and is told that, as Viceroy, he "will represent Her Majesty in receiving His Royal Highness with all the honors befitting his exalted rank." The last news of the Prince of Wales' movements is that he will embark on 16th October at Brindisi, instead of at Venice. The *Serapis* and *Osborne* have both left England for that port.

THE excitement consequent on the attempt of the Chairman of the Justices to force upon the community, as manager of municipal affairs, a man of whom nothing advantageous is known, but much of an opposite kind, has not subsided. It is admitted that Mr. Hogg's feeling in the matter should have weight, and that the Vice-Chairman should be a man not likely to be captious or quarrelsome while conscientious in discharge of his duties. But the bringing forward of a candidate with such questionable qualifications as Bysack has destroyed any sympathy that might have been felt for him in view of the proposal to attach to him, as his right-hand man, his steady and perhaps sometimes irritating opponent. Surprise has been expressed that for an appointment of this value, a larger number of really good men did not come forward, but the light lately thrown upon the working of municipal affairs under the present President, goes far to explain the fact. If the Justices and the public really wish the Municipality put in order, their clear duty is to present a memorial to Sir Richard Temple on his return to the presidency. A resignation of office by the independent Justices would be premature, before every constitutional means of redress had been tried.

IF Lloyd's Calcutta Surveyor is to be considered a fair sample of the species, it is hardly surprising that the worthy Mr. Bates of Liverpool, when accused by Mr. Plimsoll of malpractices as a shipowner, was enabled to refer triumphantly to the certificates in his hands, in proof of the soundness of his ships, and of the falsehood of the accusations made against him. A gentleman whose dealings with underwriters have generally been pleasant and profitable, might be pardoned for objecting to Mr. Plimsoll's rude insinuations, and if his position as member of Parliament did not suffice to protect him, he could fall back on his high character in the Bombay mercantile community. But these references were rendered superfluous by the testimonials of Lloyd's Surveyors. The value of these testimonials may now be gauged by disclosures just made in the daily papers of this city of the care and conscience with which they are drawn and issued. The *Statesman* has reviewed the matter so tellingly that we regret our inability to produce its remarks *in extenso*. "It may be well" says our contemporary, "to recall the not-very-remote cases of the *London* and the *Shah Jehan*, both of which ships were, we believe, surveyed here by Lloyd's representative. The latter vessel only got as far as the lower floating light, and then returned in a sinking condition with over 400 souls on board. The former ship managed with some difficulty to reach Saugor with eight feet of water in her, and then came back to her *grave* in Nimtollah, both catastrophies having been distinctly foretold by one of the other Surveyors, who tried to stop the *London's* sailing, and actually wrote on an application for insurance by her that he 'would not advise insurance on a cargo of birch brooms in her form Calcutta to Atcheepore,' the justice of which opinion was fully borne out when the *London* was broken up. It was then found that her frame and planking generally, were too rotten and water-soaked even to burn. The *Shah Jehan* had, we think, a bamboo thrust through her bows by the same Surveyor, and this was a vessel licensed to carry over 300 emigrants, leaving Calcutta in the hurricane season." We trust steps will be taken to strengthen Mr. Plimsoll's hands by sending him full particulars of these truly infamous cases. Our mercantile community is, in the right temper for it.

THE case of *Issur Chunder Dey* vs. *Forbes* has been the subject of much remark during the week. Since noticing it in our columns above, we have received the following letter on the subject. "Any one who has visited an auction room in Calcutta, such as the Exchange, must have felt his fingers itch to tingle the ears of the low class of dealers who infest such places, pushing and jabbering to an extent that prevents the ordinary purchaser from hearing, or being heard by the auctioneer. Mr. Justice Phear was evidently never present on such an occasion, or his verdict in the case of *Issur Chunder Dey* vs. *Forbes* would either have been different, or if right legally, would have been accompained by other remarks. The plaintiff, having had a misunderstanding with the defendant (the auctioneer), instead of waiting until the latter had time to discuss the matter with him, insisted an immediate attention, and kept vociferating and interrupting the sale, until Mr. Forbes was obliged to expel him from the room, which it appears he did with no more violence than was necessary. Mr. Justice Phear gave judgment against Mr. Forbes on the ground that an auction room was a public place, where the plaintiff had as good a right to be as Mr. Forbes had, and that the proper manner of removing an objectionable attender was to send for the police. If such are to be the rights of people to keep their own premises clear of disturbers, every office in Calcutta will require to keep a staff of commissioned policemen in waiting. As with some other of this learned Judge's decisions, the public is not satisfied, with its substantial justice and a subscription to defray Mr. Forbes' costs is being freely supported by the business community."

There is a veri-similitude in this account that leads us to suspect the public instinct may be more right in the matter than our own view of it. We certainly feel strong sympathy for Mr. Forbes, and are glad that a movement is on foot to defray his costs. At the same time, and as jealous of our country's good name, we cannot but feel proud that we have Judges on the Bench prepared to do violence even to their own sympathies, rather than give any handle to the charge that our administration of the law is partial. The daily papers are not perhaps quiet so careful as they should be to prevent untrue impressions as to the facts getting abroad. Thus a correspondent, who signs himself *An Englishman* in the columns of the *Statesman* yesterday, says:—"The learned counsel "for the defendant had not the remotest idea that the Court was "going to order his client to pay the costs. In all such cases the "order has always been that each party pay his own costs. It must "have fallen on the defendant like a thunder clap when the order "of costs was made. He would certainly have preferred to go into "the case and stand the chance of an appeal, rather than consent "to the tendering of an apology and to paying the plaintiff's costs "into the bargain." Now, this is absolutely untrue, and gives an altogether false complexion to the case. For the written judgment which was read out in Court, and which the Counsel had under

consideration for three days before he intimated which alternative he would take, put the proposition to him in the following items:— "The learned counsel who has appeared for the plaintiff says that "if his costs are paid he is willing to accept an apology from the "defendant, and will not press for damages. The defendant would, "I think, act rightly if he yielded to these terms." And the judgment went on to shew why the defendant might do this; and ended by saying that if he could not bring himself to take this course, then the Court would proceed to award such damages as it thought the circumstances of the case rendered right and just.

Even if the judgment had not thus expressly specified the terms as to costs, the assertion which the correspondent makes on this head, would still be without any possible foundation, for although when an apology is made and accepted at the outset of a trial of this kind, it is the usual practice to withdraw a juror and for each party to pay his own costs,—the case is altogether different when the defendant refuses to apologize and forces the plaintiff, as in this instance, to try the case out before he will express regret. In such a case, the defendant *always* has to pay costs, and the Judge would have acted entirely without precedent if he had made the plaintiff bear his own costs. We are unfeignedly sorry that Mr. Forbes should be mulcted so heavily, as we have no doubt whatever Mr. Phear is also; but it is far easier to say this and to justify our regret, than to shew what the Courts should do when such cases come before them.

To turn to more pleasant topics, Calcutta is showing decided signs of awaking from its annual hot weather torpor, and in the steamy weather still prevailing, perhaps the best sign of the approach of the cold season is the meeting of Scotchmen on Wednesday last to prepare for their annual rejoicing over the memory of St. Andrew. They evidently smell the "whiskey" from afar, and have already elected a committee, doubtless to enable them to obtain a supply of the generous fluid from their native wilds in good time. Less substantial amusements are also crowding upon us in threatricals: The Corinthians have been before the public for a fortnight, Mr. Lewis's Company open to night, and Mr. English's is close at hand. The Corinthian Company are steadily making way in public favor, and the introduction of Opera bouffe has drawn crowed houses; their rendering of *La Grande Duchesse* augurs well for what is to follow, and the applause with which it was received shows that the right vein has been struck for that description of performance. The prima donna, Miss Alice May, is simply charming, both as an actress and vocalist. In fact the only fault is that she is too charming and ladylike for her character as we were bred to see it in the hands of Schneider. Mr. Lester, as Prince Paul, acts well and sings capitally.

THE prospects of an amicable settlement of the difficulty with China are not so favorable as they were, the authorities in that country evincing a disposition to shun performance of their stipulations. Mr. Wade has notified his intention to leave Pekin on 13th October if satisfactory arrangements are not come to by that time. From Mandalay nothing bearing on the attitude of its slippery monarch is reported. The Home Government, is taking steps to strengthen the China Squadron.

The movement in the Danubian principalities is not abating, as was hoped. Fresh fighting is reported, and the Porte has declined to accede to an armistice asked for by the leaders of the movement, demanding their unconditional surrender before discussing any guarantees or concessions.

THE *Pioneer* states that the rumour is well authenticated, that Lord Napier of Magdala will resign the command-in-chief in India during the coming spring.

MONEY MARKET.

FRIDAY, 1ST OCTOBER.

AS it was known that rather considerable amounts of bullion had left the Bank, the expectation has been that this week's statement of its affairs would have been unfavorable for ease, especially as the customary demand for the Doorga Poojah holidays had also to be met; but unless the last named demand has been kept back until the three last days of the week, the expectation of tighter money has been a mistake. It is true the cash has declined to the extent of 22 lakhs, but it is entirely owing to Government action that the difference is not on the other side. During the week their drafts have amounted to 58 lakhs, bringing their deposits down to a more natural level than they have stood at since just before issue of the late loan, and proving that the late excessive bal[illegible] a delusion and a snare, as a sign of abundant [illegible] trading purposes. The public demand for the [illegible] week has [illegible] 40 lakhs. The position of the Bank is now much the [illegible] was last year at this time, and looking [illegible] everythi[illegible] affect the future, it m[illegible] more conf[illegible] last week, that no appre[illegible] essure ne[illegible] tained.

The Exchange Banks [illegible] thening [illegible] for the enlarged deman[illegible] them [illegible] weather for the moveme[illegible] ope a[illegible] and a glance at the Bank [illegible] muc[illegible] debtedness to that insti[illegible] The very large amounts [illegible] sold by them during the pas[illegible] their position, added to, a[illegible] Council drafts. Notwithstan[illegible] rates have been rather hardc[illegible] excepted, and that has declined a sixteenth in sympathy with a tightening money market in Europe. Exceptionally a little telegraphic transfer has again been given at 1*s*.9$\frac{3}{4}$ *d*., but now 1*s*. 9 11-16*d*., is the rate. The subjoined are the closing quotations for the mail of today; but as regards credits, it must be remarked that most of the really first-class paper of that kind brought 1*s*. 10 3-16*d*.

Bank Bills	...	1*s*. 10$\frac{1}{2}$*d*.
Credit Bills	...	1*s*. 10$\frac{1}{2}$*d*.
Document Bills	...	1*s*. 10$\frac{5}{8}$*d*.

at 6 months' sight.

Government paper has not been particularly pressed for sale and there has been rather a large off take, especially of the 4 per cent. stock: still prices have tended downward, and it begins to look as if a lower level of value is coming on. Most of the week's business has been at 101-13 and 101-14 for Fours; 102-12 for Four and a half; and 108 for Five and a half. Buyers have rather predominated to-day, but prices cannot be called better than the following:—

4	per cents, ...	101$\frac{7}{8}$
4$\frac{1}{2}$	do. do. ...	102$\frac{3}{4}$
5$\frac{1}{2}$	do. do. ...	108

The most exciting incident of the week, bearing on money matters, has been the Government's declaration of its intentions towards the Presidency Banks, in coming to fresh terms with them for management of the business of the State. The general terms proposed have not yet been made public, and they are to form subject of discussion in Council before the new charters are granted. But no such reticence has been maintained as to the manner in which the Government money invested in the Banks is to be withdrawn. If the resolution come to on this point is a specimen of what is proposed on others it is not improbable the Banks may be obliged to decline the Government business altogether. Nothing more unfair could have been conceived. The Government connection with the Banks is not that of an ordinary shareholder; the object of their becoming shareholders at all, a position out of the regular province of a Government, was to lend strength and kudos to the Banks who had the custody of the State's money. And when such support became to be deemed superfluous, the natural course for Government to take would be to take back its money simply. As regards the Bank of Bengal, at any rate, it is no secret that the Bank's capital would never have been augmented to its present amount but for Government urging, and the Bank in addition gave up its valuable currency privileges, trusting to be recouped by the possesion of the Governments balances. Those no doubt are valuable: though lately not so much as formerly, as they have lately become less steady in amount than formerly. But even that has not been entirely an advantage on one side, and in times of pressure the Government has had more than once to be grateful to the Bank. The Government determination therefore to sell its shares in the open market is little less than monstrous. What are the natural effects of such action? Bank shares now stand much lower in price than they did some years ago, but still they command a good premium as compared with the return they give. They are a stock very little dealt in by ordinary speculators, but they are a favorite investment in the services, and with the more quiet and conservative of the non-official classes. Certainly such investors have never dreamt that Government, in its rage for economy, would steal a march upon them, and try to back out with a profit which may be counted upon only so long as a moderate selling and buying of shares between private holder is going on. But all such holders are now to be left in the lurch. Will the Government succeed in its attempt to make a good operation? No one can believe it. The amount required to pay for the shares, at the price current in the market before this remarkable

announcement, would be over 30 lakhs of rupees. It has been very evident, for some time, that the surplus capital of the country, available for industrial and monetary enterprise more than fully occupied. No doubt, large sums of hoarded treasure have been seeing the light and going into Government securities, but there is danger lest native confidence in that investment should receive a check. When the Banks cease to be *quasi* Government institutions, the chances are that investment in them will be retarded rather than stimulated, and, laying aside the moral objection that lies upon their withdrawal from the Banks, it is very doubtful that they will do better in a pecuniary way by the plan they have resolved on, than they would have done by what is generally considered the proper course, namely, to have taken back their invested funds, and to have left the Bank either to have cancelled that portion of its capital, or to have re-issued it as it may have seen best for interests of its regular shareholders.

The Share Market has remained very flat, and very little attempt at business has been made, it being very evident that fresh life would not come until after the holidays. The great absence of business in Tea stocks may fairly be put down to that. Spinning mill stocks have been looked after, and are mostly dearer. Bank shares have had a favourable tendency; but Bank of Bengal stock is out of the market for the moment, and the subjoined sales took place previous to the announcement remarked on above. India General Steam, have recovered the late fall, but are again slightly weak. The leading sales of the week have been.—

Bank of Bengal, 1,417½, 1420.
National Bank, 111, 10, 11, 12, ex-dividend.
India General Steam, 365, 75, 85, 90, 410.
Howrah Mills, 72½, 73.
Oriental Mills, 72, 73, 74.
Fort Gloster Mills, 82, 83.
Seebpore Mills, 79, 78, 76½.
Budge Budge Mills, 2, 1, discount.
Calcutta Jute Mills, 109, 110.
Eastern Cachar Tea Co., 170.
Singell Tea Co., 97, 5, 7, 98.
Central Cachar Tea Co., 137, 36, 137.
Dehra Doon Tea Co., 85.

LATEST TELEGRAPHIC NEWS.

London, 25th September.

THE Postmaster General, replying to the East India Association, said he fully recognised the importance of making reductions in the Indian postal rates, and it was with this view that the question of India becoming party to a general union was being considered. The Prince of Wales embarks for India at Brindisi on the 16th October and not at Venice.

Turkish accounts have been received that severe fighting in Bosnia and Herzegovina continues. Spain despatching 16,000 troops to Cuba.

SMITH, "*City Press,*" 12, *Bentinck Street, Calcutta, and of all Booksellers.*

Will be published on the 1st December.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India,* and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA," *Calcutta.*

PROSPECTUS.

GRAND DRAWING OF PRIZES

ON THE

ART UNION PRINCIPLE,

IN AID OF THE

Building Fund of St. Joseph's Seminary.

60,000 TICKETS AT ONE RUPEE EACH.

261 PRIZES.

1 Prize.—A Diamond Necklace, value Rs. 10,000, or at the option of the winner, Rs. 10,000 in cash.

1 Prize.—Brooch and Earrings set with Diamonds, value Rs. 3,000, or at the option of the winner. Rs. 3,000 in cash.

4 Prizes.—Jewellery *en suite,* set with Gems, value Rs. 1,000 each, or at the option of the winner, Rs. 1,000 in cash.

5	Prizes.—Rs. 500 each.	20	Prizes.—Rs. 25 each.
5	Prizes.—Rs. 250 each.	20	Prizes.—Rs. 20 each.
5	Prizes.—Rs. 100 each.	40	Prizes.—Rs. 15 each.
10	Prizes.—Rs. 50 each.	50	Prizes.—Rs. 10 each.

100 *Prizes.—Rs. 5 each.*

Due notice will be given of the Drawing, which will take place at Allahabad under the supervision of a Committee of Gentlemen of the Station.

Tickets can be obtained from all the Catholic Chaplains of the Vicariate. from Messrs, P. Sheridan, W. D. Hogan, T. Crowley, G. A. Savielle, and J. C. Purcell, Allahabad; A. John & Co., Agra; J. Brokers' Exchange, CALCUTTA.

LIST OF PASSENGERS.

ARRIVALS.

THE P. and O. Co.'s S.S. *China*, Commander Geo. S. Brooks, arrived at Bombay, with the following passengers :—

FROM SOUTHAMTON.—Mr. and Mrs. and Miss Williams, infant and ayah, Mrs. Ravenhill, Mr. Lendrum, Mr. Sheel, Mr. T. Bennett, Mr. Harwood, and Mrs Sullivan.

FROM VENICE.—Mr. and Mrs. Llewhellin and infant, Mdlle. de Polluitz, Mr. Branson, and Mr. R. Harvey.

FROM Brindisi.—Mr. Wavell, Mr Kirchauff, Major Smith, Mr. L. Bouwen, Colonel Oakes, Mr. Good, Mr. C. Fahey, Mr. and Mrs. Sache, Dr. W. S. Kelly, and Mr. Sambaci.

FROM SUEZ.—Mrs. and Miss Grossman, and one invalided sookhanie.

FROM ADEN.—13 deck passengers.

DEPARTURES.

THE P. and O. Co.'s S. S. *Khedive*, Captain J. D. Steward, left Bombay with the following passengers :—

FOR SOUTHAMPTON.—Mr. and Mrs. Wordsworth, Mrs. Gough and three children, Mrs. W. H. L D. Brand, Mrs. Bruce Gordyne and two children, Mrs. Wilson, Lieut. L. H. Christopher, Mr. H. G. Morrison, Lieut. and Mrs. Powlett, Mr. William Buckley. Mr. Alex. Reid, Mr. Victor Jeandin, Mr. F. Bessant, Mrs. Patrick Chrystal and two children, Mr. J. S. Chrystal, Miss Robertson, Lady Charles Bacon, Mr. and Mrs. Harley Bacon, Miss Baker, Master Baker, Mrs. Austin and two infants, Captain Saportas, Mr. R. Jackson, Mr. Elton, Miss Wyllie, Mrs. Robertson and Mr, George Goldie.

FOR BRINDISI.—Mr . Henry and infant, Miss Forsyth, Colonel Horace Brown, Mr. G. R. Elsmie, Mrs. G. Randell and infant, Mr. Douglas Crawford, Major G. Tyndall, Mr. Eaton, General Hough, and Mr. C. Gergory.

little strangers, have an air of persons who have had losses, and are striving to recoup themselves of the same in a harvest of rupees. But this may be mere fancy, and guardians of the kind are after all as trustworthy as the Indian grass widow, the child's own mamma, who lets the brat tumble into the water, while listening to Swinbourne as expounded by Captain de Boots under the shade of a bathing machine upon the golden sands. Except, perhaps, that they get more soap in their eyes than they would at home, the Indian child is, we dare say, as well cared for by these advertising Christians as is consistent with their professions. And after all it is a comfort to think that there is any one to be found bold enough to guide the rising generation on its headlong career of science and speculative philosophy. Still, it is a question whether a particular establishment or institution for Indian children, one known to fame, would not better meet the requirements of the case than a number of private houses. Bearing in mind this tendency of the rising generation to mischief, the difficulty it has in making its grievances known to distant friends, and the tender care it requires in illness, we should not be sorry to see in some good English climate like 'Westward Ho'! a nursery and nursery school established for small Indian children, whither Indian parents could despatch their treasures with the least possible chance of their coming to grief. We have nothing to say against private establishments at present existing, except that they have not the guarantee of efficiency and cheapness together that a large establishment on the co-operative principle would probably supply.

THE EIGHT FRENCH PRETENDERS.

IT is natural that men who aspire to govern a country should remind it of their existence when it ceases to remember them, and every manifesto of a Pretender is the cry of distress of a man who is being drowned by the waves of oblivion. It is 45 years since this literature *first* established itself in France, and the chief of this literary school, the *Comte de Chambord*, is still the most elegant of its writers and the most largely read. Unluckily, time and events have augmented the number of his rivals, and the literature which he inaugurated has since his appearance become numerously represented. France now boasts eight Pretenders, seven at least of whom are ready to charge themselves with its happiness, while the other, the Comte de Paris, has declared himself to be simply the heir-presumptive of a contingent king, thereby creating for himself a position unique in history. Those who are acquainted with the *Comte de Chambord* know that he has the personal qualities requisite for a sovereign who wins the affections of his subjects. His manner is at once dignified and kindly. He smiles gracefully through a slightly grayish beard, and his clear blue eye is both encouraging and penetrating; those who approach him leave with regret, and revisit him with pleasure. Attentive observation, however, pauses with regret on that slight compression at the summit of the forehead, for there creeps out an inflexible obstinacy. It is this slight compression, coupled with his writing desk, which will make the Comte de Chambord an everlasting Pretender. In that retreat of his brain, inaccessible to the eloquence of reason, he has lodged the White Flag, and his writing desk is the exact image of Pandora's box. As soon as he opens it, everything escapes which is able to prevent his accession, and he only closes it just in time to preserve the persistent hope of his return. At the opposite extremity of the ladder, in point of date, age, and literary pretension, stands the *Prince Imperial*, personally better known in England than in France. Politically, his friends credit him with the qualities of his father, while his adversaries attribute to him the defects of his friends. From this exchange he certainly reaps no advantages. His partisans have committed the mistake of intrenching themselves in the doctrine of the *Plebiscite*, forgetting that in order to submit questions to the country it is necessary to wield power. Seeing in him merely an instrument of their personal passion, they want to make him serve the hatreds they cherish and meanwhile they make him expiate the animosities they inspire. This is why France, before according him what he wants, will wait till he has extricated himself from his dangerous entanglements and shown what he is capable of.

In naming the *Comte de Paris*, we name the third Pretender to the throne. He is not, however, a Pretender, but the heir of a Pretender, who apparently wishes to die in that capacity. Under these circumstances, he is now playing the most subordinate rôle which can be played by a Prince who is the direct heir of a Royal branch. While watching him closely, one begins to admire the chance, or the design of Providence, which has given him a moral and physical temperament so singularly appropriate to his position. Everything in him denotes a man who will not allow himself to be enticed into that feminine weakness called impatience. He likes long and serious labour, and has tested his capacity in the solution of social questions which may occupy an entire life. The Legitimists surround him, both noisily and frigidly, in such a way as to compromise without adopting him, and without making him one of themselves prevent his belonging to others. For his own supporters he has become a centrifugal sign; he has become the point whence they start, and has ceased to be the centre to which they converge. He, thus, without a word of regret, awaits the hour assigned by Providence. If that hour ever strikes, France will find in him a king respecting the rights of the country, devoted to its tranquillity, setting it as example of probity and industry, and soothing by his presence alone the fruitless fever which devours it.

In a country, where everything goes by contraries, the Republic counts two Princes among its Pretenders. The *Duc d'Aumale* and *Prince Jerome Napoleon* have been long standing face to face with each other. Prince Napoleon was seated on the steps of a throne, the Duc d'Aumale was in exile; the one had to gain by a duel as much as the other had to lose. By the challenge of the one and the refusal of the other, their respective courage or weakness cannot be tested. The fall of the Empire has turned the table. Physically as well as morally the contrast between the two is very great. The *Duc d'Aumale* is slender, erect, and halting with his left leg, like a soldier cured of an old wound, with a fine head, a well-formed nose, an intelligent forehead, slightly protruding cheek bones. His head stoops towards the shoulders, and his grave metallic voice has that natural vibration which conceals unexpected emotions. An Academician, rich, and a man of the world, he surrounds himself with noise to drive away the silence which mourning has made around him. He is active only by fits, and his lassitude lasts longer than his zeal. During the last crisis the Prince might have come into power had he possessed followers; but he has such a horror of a new exile, that the pleasures of power would not compensate him for the agonies of the attempt to win it. If he ever takes a leading place he will owe his advancement more to his misfortunes than his friends.

Prince Napoleon is a very different character. He has against him not an unknown, but a too well-known past. From the beginning of the Empire he was always one of its weaknesses, and never an element of strength. Around him mustered the third Napoleon's worst enemies,—those who dared not attack him. He now lives in Paris apparently occupied with his private affairs and giving only a careless attention to politics. To see him, gives the key to his attitude and his language. The eyes, mouth, forehead, and nose express both the desires of the people and the will of Emperors, and it is with surprise one sees on a body evidently made for the enjoyments of peace a head re-calling that of the most insatiable of modern warriors. The *scrutin d'arrondissement*, might give him a seat in the next Assembly; and once there his intelligence, the *prestige* of his name, the illusions excited by his countenance, and the desire of thwarting the Bonapartists might make him first a tool and then a menace for his rivals. In this situation, he would have neither the scruples nor the hesitations of the Duc d'Aumale. He would boldly vote for what would serve his designs. Of all French Pretenders he is the farthest removed from power; but his entrance into the Assembly would be an enormous bound, lifting him at once quite close to the summit or casting him to the bottom of the abyss. He is playing with two weapons only. He handles democracy which leads to civil war, and Cæsarism which leads to foreign war, and by a last contradiction provokes the very prospect of which he has the profoundest horror.

M. Thiers is the third Republican Pretender, and it is scarcely necessary to describe him. The pink-white face, half-womanish, half-childish, illuminated by two eyes full of mischief behind gold spectacles; the restless mouth, the broad and polished forehead, surmounted by tufted hair white as snow, all these characteristics—all, even to his gray hat and brown coat, whatever his detractors may say to the contrary, belong to history, and are already historical. He has all the cleverness, all the attractiveness of the woman, with the impatience, the unreflecting passions, and the unjustifiable sulkiness of the child. If he wishes to be seductive he is coquettish, and a person loses all charm in his eyes as soon as he is sure of having conquered him. Like a woman, he has always distrusted every one except himself. Like a child, what he excels in is demolition; and every time he has been called upon to build he has hastened to abandon power to become once more a destroyer. When he surrendered office in a fit of childish sulkiness, he was convinced that he would be retained at any price.

Since his fall, his enemies accuse him of being the author of all the obstacles encountered by the new Government. During the last crisis his patriotic face, unruffled by party passion, once more attracted the attention of the country, and it was seen that the old man railed upon at home, was respected abroad.

But of all the figures on the stage, *Gambetta* is the strangest for nothing exceeds the bounds of probability more than his political career. A page of Sallust, which he recites in the Palace of Justice, makes him popular and that popularity suddenly carries him to the Corps Legislatif. A speech, which compels the attention of the Chamber, abruptly forces him on public attention. The 4th of September revolution conducts him to the Hotel de Ville, a balloon transports him into the provinces—he is a Dictator who drops from the clouds. For four months, he is the centre of attraction for France and the whole world. For four months, he excites men's minds, inflames their imaginations, arouses every passion and every devotion; and while his pen and his tongue predict victories and announce successes, the armies which his voice has collected vanish and crumble away, leading France from harangue to harangue, and from proclamation to proclamation to that painful goal called the Treaty of Peace. M. Gambetta still remains the Pretender of the mob, the mouthpiece of social discontent, the champion of all who dream of establishing what cannot be on the ruins of what is. This popularity he will do anything to preserve. It is for it he exhibits on the heights of Belleville that long hair, falling carelessly over his shoulders, which he combs at Versailles; it is for it that he smiles on the galleries of the Assembly, and thunders at banquets; it is for it that his stalwart shoulders stoop at the Tribune of the Chamber, and stand erect in the face of his real *clientèle;* it is for it that he displays at once all the vehemence and all the suppleness of his Italian nature. His large head with profuse hair and beard, which begin to be gray, his florid face, his fixed and penetrating eye, which flashes with impetuous suddenness, his hands, which involuntarily beat the tribune, the violence of his gestures, the exaggerated movements of his body, his thick neck and his broad and arched shoulders —all these have the gift of irritating individuals and of exciting the crowd, for it personifies the mob. If ever he makes the Revolution triumph, of which he is more the incredulous than the impassioned apostle, he will be the instrument of all unsatisfied aspirations, the mouthpiece of all anti-social demands. He will be the first whom the mob will push forward into the breach he will be the first to inculcate order, and the first to tolerate disorder; the first to invoke law and the first to let it be violated; the first to denounce the scaffold, the first to let it be erected, and, perhaps, the first to mount it.

I have spoken of an eighth Pretender. This one has a multiform aspect. Sometimes he is called Delescluze, sometimes *Felix Pyat*, sometimes Cluseret, and sometimes Raoul Rigault. He is lion or fox, tiger or jackal. He has fits of savagery, and fits of cowardice. When he is in power folly opens its doors, churches close theirs, and Europe doubles its guards on the French frontiers. This Pretender regards the *bourgeois*, who oppose him, with a cynical hate. While he governs, social life is stopped. Blood flows, fires rage, those who tremble encourage those who strike. Prisons are one after another emptied and filled. The courts of justice close their doors. Society remains palpitating till this Pretender, drunk and exhausted by the excesses of his power, rouses vengeance for his victims and disappears behind a bloody mist, to come back again when the blind rivalries of his opponents once more deliver up to him the gold, the life, and the honour of France.—*Abridged from the Times.*

THE MORALITY OF ADVOCACY.

[By a Barrister.]

An article in the *Friend of India* of the 18th September, headed "the Morality of the Bar" appears to call for some reply, as the writer thereof in my humble opinion displays a very common misapprehension of the position and duties of an advocate. From the conduct of the Solicitor-General in the recent divorce case of Gladstone *vs.* Gladstone, he drew up an indictment against the bar generally, implying that its members are in their capacity of advocates ready to make statements which they know to be false. Now it is difficult to see why the Solicitor-General and Queen's Proctor in that case, are so bitterly blamed by the writer. The charge of collusion was not as he declares "everything." As the judge said—there were two issues to be decided, collusion between the parties, and the adultery of the petitioner. The Solicitor-General abandoned the charge of collusion at the last moment, but as to that of adultery, confessing the weakness of the evidence, left it to the jury for what it was worth. The judge and jury had no doubt at the conclusion of the case that the evidence was perjured. The Solicitor-General of course had his suspicions also, but he was not the judge, and it seems to me that he only did his duty in laying such evidence as he had before the Court according to his instructions. I do not see how he can be condemned, unless it be assumed that he was told beforehand by those who set him in motion, that the evidence was all false—a supposition which is incredible. The Queen's Proctor, according to the judge, was to blame because he had intervened without having any material new facts to bring to the knowledge of the Court. The code shows that it is the practice of the Queen's Proctor to intervene on other grounds as well as on that of collusion. Here, he seems to have exercised his discretion wrongly, but as the judge said he is obliged to trust to third persons, and there is no reason for supposing that he any more than the Solicitor-General, knew his witnesses to be perjured.

The writer of the article in question, proceeds to quote Mr. Ruskin's strictures on the trials in *Pickwick* and *The Old Curiosity Shop*. Now even if Mr. Ruksin were right in his facts, I submit that the bar is not to be judged by the representations of authors of fiction. Mr. Wilkie Collins and our lady novelists, are exceedingly fond of introducing a criminal trial into their works; but God forbid that the conduct of a case in an English Law Court should be judged by their pages. Dickens was a great writer, but Sergeant Buzfuz and the prosecuting Counsel in Kit's case, are as much caricatures of members of their profession as are almost all the ladies and gentlemen whom he draws, and are no more to be taken *au serieux* than are Sir Leicester Dedlock or Sir Frederick Verisopht to be considered as types of leaders of society. But further; Mr. Ruskin is wrong in his facts. In neither of the trials alluded to, does Dickens represent that the Counsel knew the accused parties to be innocent of the charges made against them. No one except the two persons immediately concerned, knew exactly what had passed between Mr. Pickwick and Mrs. Bardell on that eventful morning in Goswell Street: and from the evidence adduced at the trial, a promise of marriage might fairly be inferred. Messrs. Dodson and Fogg were probably in the worthy lady's confidence; but she appears to have honestly thought that Mr. Pickwick had made her what was equivalent to a proposal. Where, again, is the barrister who prosecuted poor Kit represented as knowing that the boy was innocent? How was he to know it, unless Mr. Sampson Brass had privately confessed the matter, which was not very likely and which Dickens no where pretends was the case? It is true that the Counsel's examination of one of the witnesses leaves a false impression upon the jury as to a not very material fact; and I grant that in such a case he ought to have allowed Mr. Swiveller to complete his answer. In a real trial, the judge would have insisted upon his whole answer being given, and the incident only helps to show the impropriety of taking the amusing caricatures of a popular writer, as proof of the way in which a case is managed. I only wonder that Mr. Ruskin did not go on to quote as evidence of Counsel's mode of addressing a jury in a State trial, the scene from *A tale of Two Cities* where Striver "of the King's Bench Bar" prosecutes the hero for high treason at the Old Bailey.

Mr. Ruskin, however, proceeds with his imaginary barrister as follows. "He accused an innocent person to-day, to-morrow he will defend a rascal." Unthinking people here see a condemnation of his profession. But the fallacy lies in confounding the duties of an advocate, with those of judge or jury. An advocate does not see a crime committed: and how is he to know if the man whom he prosecutes, is innocent or if the man whom he defends is guilty? He must rely upon his instructions; he may have his private opinion as to the merits of a case, but he is not the judge. Let me quote the forcible words of Erskine on this point. "From the moment that any advocate "can be permitted to say that he *will*, or will *not*, stand "between the crown and the subject arraigned in the court where "he daily sits to practise, from that moment the liberties of "England are at an end. If the advocate refuses to defend from "what *he may think* of the charge or of the defence, he assumes "the character of the judge; nay he assumes it before the hour "of judgment, and in proportion to his rank and reputation, puts "the heavy influence of perhaps a mistaken opinion into the "scale against the accused, in whose favour the benevolent prin-"ciple of English law makes all presumptions, and which com-"mands the very judge to be his counsel." Those who have watched criminal trials in England, will be slow to accuse prosecuting counsel of any intemperate zeal. Without in any way putting forward their own opinion on the case, they show a remarkable

fairness to the prisoner, and if he is undefended will often mention to the jury, such points as tell in his favour. The counsel who defends a prisoner is in a very different position. And at the outset I say that he is perfectly justified in defending a man whom he believes to be guilty—nay more whom he knows to be guilty. This does not mean that he may do anything for his client which he may not do for himself. He may not mis-state facts, or seek to substantiate what he knows to be a fraud. His duty is to see, however hopeless his client's case, that the charge is strictly proved and that if he is convicted, he is convicted according to law. He may and ought to take advantage of any weakness exhibited by the prosecution, and avail himself of every technical "objection" that he thinks may tend to save his client. The plea of "not guilty" is not to be taken as an assertion of moral innocence. The word "guilty" implies much more than that the accused person committed a particular act. It implies that he committed it when sane, and with such intention, and under such circumstances, that his act amounts to a legal offence. It is one thing to kill a man, another to commit murder. And if—a very unlikely case indeed—a man were to come to me, accused of a crime, and confess it to me in such a way as to leave no doubt in my mind but that he deserved the punishment of the law, I should feel bound on the proper fee being paid to undertake his defence, unpleasant as the task would be. My duty would be to see that every thing was strictly proved against the prisoner: but I should be clearly wrong if with the knowledge I possessed, I sought to save him by directing suspicions against an innocent person. Charles Phillips it will be remembered, was accused of this conduct: his client Curvisier having on the second day of the trial confessed his guilt to him, but he satisfactorily cleared himself from the imputation. In such a case as I have put, an advocate may, as a legal writer lays it down, "honourably say to the accuser: prove my client guilty if you can: you use the law as a sword, I will take it as a shield;" And so long as he keeps within the lines which the law has raised for the protection of the accused, he may—nay he must afford his client the benefit of its shelter. If the law allows a loop-hole of escape, he is a traitor to his trust, if he does not bring this before the attention of this judge. He would incur a fearful responsibility indeed; if knowing an objection which if taken would be fatal to an indictment he were to suppress it, because he were satisfied of the fact of his client's guilt" at. Take the case of Kali Churn Rakhit convicted of murder a fortnight ago at the High Court Sessions. A more hopeless case could hardly be conceived by any one who had read the depositions taken by the committing magistrate; but the prisoner's counsel only did his duty in insisting upon such discrepancies in the evidence as he could find, and suggesting the possibility of provocation.

I have said that a Counsel is justified in defending a man whom he knows to be guilty: that is to say that he is entitled to call upon the accuser to strictly prove the offence urged against his client. But he is not of course justified in supporting a charge against a man, which his client tells him is false. In the first case he does what he may do for himself, and what is in strict accordance with law. In the other instance he does for another what he may not do for himself; and lends himself knowingly to be the instrument of a great wrong. However black a man's offence is, he has a right to have it proved before he is punished for it; but no man is justified in stating deliberately what he knows to be untrue. But as a matter of fact, it is an exceedingly rare occurrence for a barrister to have any personal knowledge of the truth of the fact which he is required to lay before a judge. The English system which requires the intervention of a third person who is an expert, renders it peculiarly unlikely that such a one would inform the Counsel he instructs of his client's guilt, and thus do all he could to cramp the Counsel's energies. Here in India, where a Barrister is often instructed directly by his client, the former it seems to me may safely undertake almost any case, as even after the most patient investigation before an acute judge it is difficult enough to say where the truth lies. There is doubtless a right and a wrong side to every case; but as long as a counsel is careful never to state what he knows to be false, he may uphold either side, it being the judge's duty and not his, to pronounce which is the right and which the wrong side.

I have endeavoured to the best of my ability in so short a space to show that advocacy is not the immoral art, which it is accused of being. I have argued the question on general lines of conduct; but I do not deny that in many points great circumspection and nicety of conduct is required by him who in pursuing the duties of an advocate, does not forget his duties as a man. There is no doubt our profession does afford many temptations to the dishonest; and in all trades there will be found a sufficient number of black sheep. But I submit we are not to be judged by these nor to be condemned from pages of fiction; and in particular I do not hesitate to characterise Mr. Ruskin's remarks on the subject as a gross libel on an honourable profession.

NOTE.—We willingly insert this most able apology. We shall probably notice some points of it, in an early issue.—ED. *F. of I.*

DACCA.

(FROM AN OCCASIONAL CORRESPONDENT.)

SINCE the departure of the Lieutenant-Governor, our city has been visited by two lesser lights, ecclesiastical and legal, in the shape of the Bishop and Mr. Justice Jackson. The coming of the latter was with a view to the inspection of the procedure of the local Courts, with the conduct of which he is reported, with what truth I know not, to have been not very well satisfied. What with the late Stevens case, and another still more recent, connected with the proceedings of a magistrate at no great distance from this the idea of a judicial circuit of this sort has been started none too soon. As for the visit of the Bishop, it appears to have brought wars and rumours of wars with it, rather than that peace and blessing that one usually associates with lawn sleeves. It seems that the Lieutenant-Governor during his visit here, made some suggestion to the local Chaplain with reference to the establishment of a school, for poor Europeans and Eurasians in Dacca. Armed with some intimation of this sort, the Bishop and the Chaplain put their heads together, and having previously galvanized our careless Gallio of a Commissioner into action, called a meeting of the inhabitants of Dacca on board the *Rhotas*. The morning being, unfortunately cloudy, only some three inhabitants, besides the officials who also amounted to three, assembled. It was determined, however, to start a School in Dacca in connection with the Diocesan Board. A school committee was elected, and an appeal for donations and subscriptions from the inhabitants of the station was drawn up and subsequently circulated. Now, it seems that a school of the kind had been for some years already in existence in Dacca, but I grieve to add, conducted by a Baptist school master. As it is certain that there is not room in Dacca for two Schools for poor Europeans and Eurasians (that being the class contemplated by the late liberal Government minute on this subject), and since it is, therefore, extremely unlikely that the Government will sanction grants-in-aid to both the action of the Bishop and his Committee appears very like an attempt to out-rival and destroy the existing school. A number of the inhabtants of the station looking at the matter in this light, and preferring an unsectarian school to one that is avowedly sectarian, have determined to support the existing school. There is no doubt that the Bishop's Committee have made at least one false step. In their circular requesting subscriptions, they distinctly state that it is the wish of His Honor the Lieutenant-Governor that a school in connection with the Diocesan Board should be established in Dacca. Here we are landed in a dilemma. Either Sir Richard Temple has been lending his name and influence to the starting of a school on a distinctly sectarian basis, which is contrary to the spirit not only of the administration but of his own minute, *or* subscriptions for the new school have been, and are being, collected on false pretences. One of the local papers is very amusing in connection with this business. The editor the other day, in the course of some remarks on the existing school, said "If it be true that aid is wanted to enable the proprietor to marry a woman, &c." Exception being taken to this somewhat coarse reference to the domestic arrangements of the proprietor, our editor defended himself in his next issue thus.—"We do not know the sex of the person alluded to, but suppose it to be feminine."—This is delightful; it reminds us of Addison's Salamander, who "knows no distinction of sex in those she converses with.... and is not so narrow-spirited as to observe, whether the person she talks to (about) be in breeches or petticoat."

Mr. Inglis and his Muneeporee hockey-players have returned to Dacca after their successful campaign in Calcutta, and our station games, which had been suspended in the interval of their absence, have been recommenced. The river has fallen between three and four feet within the last few days.

LETTERS TO THE EDITOR.

THE EFFICACY OF PRAYER.

To the Editor of the Friend of India.

SIR,—Might it not be well to state more clearly, that there are two kinds of prayer—prayer for purely spiritual aid, the efficacy of which can in the nature of things prove itself solely to the consciousness of the individual, and prayer for material blessings, such as the healing of the sick, the efficacy of which may be as much a matter of evidence as the miracles. I give no opinion on the subject, but we all know that innumerable instances of the efficacy of this kind of prayer are on record, and it may be doubted if the "philosophers" have given to these an adequate examination before rejecting them as groundless. But even supposing the inutility of prayer for material blessings to be granted, it is still improper to speak as if prayer had proved fruitless. For the great value of prayer as a spiritual power is to bring us light and strength, and the one way in this respect is for every man to make trial of it for himself. Most religious people believe that spiritual life among men has now reached a stage of development when outward evidence—though many believe that they are still vouchsafed—are no longer of primary necessity to prove the inward facts.

NEMO.

OUR SOLDIERS' CHILDREN.

To the Editor of the Friend of India.

SIR,—I see in a paragraph of your paper (September 11th) that I am mentioned as having commenced an establishment for soldiers' children in the Hills. This is at least premature, no such undertaking has yet been begun by me, but with your permission I should like to say a few words as to what I had wished to do.

As it is impossible to have all married soldiers in the Hills, and there is a difficulty in having all mothers of children away from their husbands, the plan I had in my mind was of a much more modest kind than the wholesale removals, advocated by some who have written on the subject.

To me the only feasible plan seems to be to have some establishment for soldiers' children in the Hills which shall be partly a nursery, partly a convalescent hospital, and partly an infant school. I wished very much to take a house at Dalhousie and try a small experimental one, limiting the number to about 20 children taken from the neighbouring stations in the plains, choosing of course the most delicate ones. I intended to take children of all ages, even babies in case of the mother's death, or in case of special illness. I should have had them sent to me at Umritsur, taking them under my own charge from there to Dalhousie, and bringing them back to their parents by November. I am very sanguine that this plan might be made succesful, and from one year's experience on this small scale the cost of a larger establishment could be estimated, and experience gained on other important points.

With regard to funds, I wished to have Rs. 1,000 in hand before beginning at all; as it would be wrong to undertake the responsibility without some such guarantee. The balance required (whatever it might have been) I should hope to raise by subscriptions amongst my private friends. I hoped at one time to have obtained the Rs. 1,000 from some public fund or subscription, but found there was no such fund to apply to. This was a difficulty which, perhaps, might have been overcome, but I was unable to carry out my plan because I could not obtain the proper sanction for removing the children from their regiments, from the military authorities. It is unnecessary for me to point out that unless such sanction is given no private scheme can ever have a trial.

THE WIFE OF THE CHAPLAIN OF UMRITSUR.

Note.—May we commend this letter to Lord Napier's attention.—ED., *F. of I.*

THE OPIUM TRAFFIC.

To the Editor of the Friend of India.

SIR,—In the issue of the *Friend of India* of the 4th instant, I see a letter regarding the Opium Traffic, which is as "sweeping" in its statements about Government, as it complains the *Pioneer* is in misleading those who take no interest in the opium question, or are ignorant of the real facts of the case.

It is all very well to condemn the Indian Government as responsible for the physical ruin of the Chinese, but Government do not compel the Chinese to buy opium from them. The Government have made opium a monopoly, but this is not to *make* another country buy it. The Chinese are at liberty to manufacture their own opium, or buy it somewhere else; but the opium from India being good they prefer it. Why should the Indian Government be blamed, because within its territories a drug is prepared, which on account of its quality, sells better and is preferred in the Chinese market to Persian, or other opium? One of the chief agitators against the opium traffic, when he had it in his power in India to pronounce against it, in fact when it was being cultivated under his nose in Malwa never once moved in the matter, but now having retired has a deal to say on the subject as not becoming a Christian Government. How is it that all this was not said before?

Suppose the Indian Goverment were to give up the Opium monopoly, how does Mr. Evans propose that it should make up for the loss of the six millions of revenue which the abolition of the traffic would cause? The breaking up of the Department would be the cause of misery to numbers who are earning their daily bread in it, while it would be ruin to the cultivator, for the price of his opium in no small way helps a ryot to pay his malguzaree, and he would be a great loser if this were stopped. I believe the cultivation of opium was a stay to thousands during the last famine.

FAIR PLAY.

RAILWAYS *vs.* CANALS.

To the Editor of the Friend of India.

SIR,—I have just seen the last report of the working of the Madras Railway in which the magnificent dividend of 1·775 per cent. On the outlay is announced. As the community are taxed at the rate of 5 per cent. for this capital, perhaps your correspondent X. Y. Z., who hails from that mysterious Presidency, will be able to explain the advantages which the community enjoy from this very prosperous undertaking, so that the system should be adopted throughout India as the greatest economical boon which can be conferred in the country.

It is to little purpose to say that the charge to the *sender* is at the rate of so much a ton a mile, if it is not shown that this charge is sufficient to pay the guarantee on the capital and that the outlay is profitable to the community who are taxed to pay the shareholders.

I may be hopelessly wrong in all I have said, but then there should be no difficulty in proving it.

A. B.

SPIRIT OF THE NATIVE PRESS.

THE *Amrita Bazar Patriká* of the 16th September writes as follows in connection with the "Statistics of Production" in the districts of Hooghly, Krishnagar, and Jessore: In Hooghly, the highest rate of rent per beegha is Rupees twelve, in Krishnagar two, and in Jessore eight. Though we might expect to find that the rate in Krishnagar would be higher than that in Jessore, and lower than what prevails in Hooghly, it is not so in practice. The reason however is not far to seek. While in Hooghly and Jessore not a single *cottah* of land remains uncultivated, there are whole fields lying waste in Krishnagar. The area of culturable land in each of the districts of Hooghly and Jessore is almost co-extensive with those districts, while not one half the entire area of Krishnagar is under cultivation. In the former two districts, the peasantry are somewhat more advanced in the knowledge of agriculture, than the same class in Krishnagar, and succeed it is said in growing about twice as much as the latter, on the same extent of land. But they labor under serious disadvantages from the high rates of rent. The backward condition of Krishnagar in agriculture is chiefly due to the scantiness of her population. In Jessore and Hooghly again, the population is dense, and culturable land not easily procurable. It would be well for the country if people from these densely inhabited districts could be induced to settle in Krishnagar which only wants men to develope her agricultural resources. In this respect, the districts of Mymensing and Midnapore are similar to it. Educated and enterprizing natives are besought to use means for the reclamation of the Sunderbuns and the large extent of waste but fertile lands in Bengal.

REFERRING to the Resolution of the Bengal Government, in a recent number of the *Calcutta Gazette*, on the system of summary trials, the *Dacca Prakásh* of the 19th September remarks that it is well known how the country with one voice protested against the passing of the sections in the Criminal Procedure Code relating to summary trials, and experience has not changed mens' opinions on the subject. We indeed know that to many a despotic District Magistrate the sections are highly agreeable, and that they are anxious to see them safe. It was therefore probable considering that they were passed as an experimental measure, that, these officers would act with caution to ensure satisfactory results. But as soon as all doubts are removed as to their experimental character, grave consequences will follow. From what is known of the character of the Mofussil Magistrates, it may be predicted that summary powers will be a dangerous weapon in their hands. In the absence of appeals, the ends of justice will be frequently defeated, and a continuance of the system will but revive the anarchy of the days of the Mohomedan Nawabs. If the Lieutenant-Governor is really desirous to know whether the system has worked satisfactorily, and has been popular with his subjects, he should consult the opinion of the people themselves and not accept the reports of the Magistrates whose interest it is to pronounce the system free from all defects.

THE *Som Prakásh* of the 20th September asks Government to change the hours of work in the colleges and schools. The present arrangement, under which the students are engaged from ten in the morning to four in the afternoon seriously injures their health; in fact, this is one of the causes of the decline in the healthiness and physique of the rising generation of natives. The old native system should be reverted to, and five hours in the morning and three hours in the afternoon should be the working hours in all educational institutions.

THE *Sabachar* of the 20th September observes with regret that the present District Magistrates are greatly over worked. Excessive work shatters their health and prevents them from paying due attention to their multifarious duties. Public interests suffer in this way. They should be relieved of all duties in connection with education and the hearing of appeals from the decisions of criminal suits by the second and third class deputy magistrates. The former should be entrusted to the Director of Public Instruction and the latter to the district judges. The greater portion of their work in connection with jails might also with advantage be transferred to the Inspector General of jails.

THE *Pratidhwani* of the 21st September dwells on the need of establishing an Association in Calcutta for advocating the rights of the people. The British Indian Association is all for the zemindars, and will never do any thing on behalf of the tenantry. Moreover Government finds it easy to win over the independent members of that body by titles of distinction and seats in the Legislative Council. It would however not be so easy to stop the mouths of the people, if they were taught to value their political rights and discuss them in a free and out spoken manner. Abuses in the administration will be rectified when public opinion becomes strong enough to influence Government, and this will never be the case so long as a people's association remains a desideratum.

THE *Sámbad Probáhkar* complains that there is no free school in Calcutta, for the education of the children of poor natives. It is to be regretted that the Municipality is indifferent to this matter.

POETRY.

TO MAUD IN THE HILLS,

A SONG ON THE 1ST ANNIVERSARY OF HER BIRTHDAY.

"Heaven lies about us in our infancy"—Wordsworth.

Maud, lady Maud, is one year old,
Maud so round and so fair to see ;
Maud is merry and bold, so I am told,
And blithe in the hills laughs she.
But his jubilant strains Love sends from the plains
To this little life in its dawning ;
And a song to greet, in her distant retreat,
Our Maud on her birthday morning.

The mountains shall blush with a sun-rise flush,
On this day of all the week ;
And the silent snows shall be red as the rose—
As the rose that blooms on her cheek !
While the clouds in the valleys, like sheep in green alleys,
Come trooping up to see
Our maiden tender, our Maud in her splendour,
For to-day a year old is she.

And the sparkling rills drop down from the hills
And the peaks that are muffled in snow,
And are come to greet, with their music sweet,
Merry mistress Maud below.
And the breeze above whispers words of love
Through the trees in the woodland shady ;
And 'neath sunlight glancing the shadows are dancing
In honour of our little lady.

And aloft is heard the bright note of the bird,
And beneath the cicalas are shrill,
As they cheerily pass through the glistering grass,
On the sun-light side of the hill.
And the squirrel darts swift to his hole in the rift,
Mid the dark boughs overhead ;
Where the orchid's cluster of glorious lustre
Is trailing in azure and red.

For 'tis Nature's mind that such welcome kind,
To the soft child-flower should be given,
Nay, let me be dumb, for has she not come
But one year from the nurseries of heaven !
My wish shall be, sweet Maud, for thee,
That thy life, through its whole glad time,
May ever be bright with the holy light
That blesses its opening prime !

W. T. W.

OUR LIBRARY TABLE.

WE have to acknowledge receipt of the following books and publications which we are unable from want of space to notice further :—

Newman's Indian Bradshaw for September 1875.—W. Newman and Co.

Thirty-Sixth Report, Calcutta Sailor's Home.—City Press, 12 Bentinck Street.

Christian Intelligencer for August 1875.—T. S. Smith, City Press.

Essay on Cultivation and Preparation of Flax.—Calcutta Central Press Company, 1875.

Mookerjee's Magazine for March, April and May 1875.

Calcutta Magazine for August 1875.—Owen Aratoon, Calcutta, Thacker Spink and Co.

Archæological Survey of India for the year 1872-73.—Alexander Cunningham, C.S.I.

Indian Medical Gazette of September 1875.—Edited by K. McLeod

Annual Report, Police Administration of Calcutta, for the year 1874.—Stuart Hogg, Esq., Bengal Secretariat Press, 1875.

Report Meteorological Report of Bengal for the year 1874.—Calcutta Bengal Secretariat Press, 1875.

Return of Vaccination N.-W. Provinces, Bundelkhand.—By Surgeon Major F. Pearson, Allahabad, 1875.

Transactions of the Archæological Society of Agra, January to June 1875.—Delhi Gazette Press, 1875.

Thomason Civil Engineering College Report, 1875.

How to speak and write English.—By Major, W. R. M. Holroyd, B.S C., Director of Public Instruction, Punjab, Lahore.—Victoria Press, 1875.

Cotton cultivation in the Punjab for the year 1874.

Report on the Excise Revenue, Central Provinces, for the year 1874-75.—Nagpur, Chief Commissioner Office Press, 1875.

Indian Evangelical Review, vol. III., July 1875, *No.* 9.,—Bombay, 1875.

Report Public Works Department, Bombay 1874-75.

Indian Antiquary for August 1875.—Bombay, Education Society's Press.

Administration Report of the Forest Department, Madras, for the year 1873-74.—Madras, 1875.

The Prison Administration of British Burma for 1874.

Baroda Complications, Press Etiquette, with a few words in defence of Colonel Phayre.—London, W. Ridgway, 169, Picadilly, W. 1875.

Irrigation in India, an address by Lieut.-Genl. Sir A. Cotton, K. S. C. I., Manchester, 1875.

INDIAN INTELLIGENCE.

BENGAL.

THE amount subscribed for the entertainment to be given by the native gentlemen to the Prince of Wales has now reached Rs. 20,750, of which Maharanee Surnomoyee has given Rs. 4,000.

GENERAL RUNODEEP SINGH, Sir Jung Bahadoor's brother, will be attached to the Staff of the Prince of Wales whilst His Royal Highness is in Calcutta. During that time Major J. Upperton, 16th Bengal Cavalry, Lieutenant Lord William Beresford, 9th Lancers, and Lieutenant H. I. Hardy, Rifle Brigade, will form part of the personal staff of His Excellency the Viceroy, as Extra Aides-de-Camp.

THE *Civil and Military Gazette* informs us that "orders have at last been made upon the memorial of the members of the Bengal Medical Retiring Fund to buy up their interest in the Fund. The forty junior members, who have set a praiseworthy example of unanimity to their elder medical brethren, will be rewarded by the immediate return of all past contributions, and cessation of further liability. The next sixty odd members, having *one* dissentient member who happens to be junior to the rest, have been informed that the refund of their contributions can only be made on withdrawal of the opposition of the recusant junior. But the senior members, having no less than eight dissentients in their midst, have been put out of Court altogether, as indeed might have been expected."

NORTHERN INDIA.

GRAND preparations are being made at Indore for the reception of His Royal Highness the Prince of Wales.

THE *Pioneer* says: "We believe we must accept the rumour, since it comes to us well authenticated, that Lord Napier of Magdala will resign the command of the army in India during the coming spring."

THE natives who were injured in the recent railway accident near Kutnee have mostly all been sent about their business, after receiving compensation ; some, we believe, got as little as Rs. 5, some Rs. 8, or 10, and have signed clear of all claims on the company. There must have been some sharp work here, as the poor fellows evidently could not have known what they were signing for.

A CASE of unusual interest was committed for trial on Thursday week last by the Officiating Magistrate of Agra. On the 11th August last a woman's headless body was found in an unfrequented part of the suburbs of Agra, and for a long time the police were entirely baffled in their efforts to discover the criminals. A few days ago the paramour of the woman, with whom she had been living for the past ten years, came forward and gave information, which enabled the police to identify her with the deceased. The persons in whose company she was last seen at a *mela* held on the 9th August were arrested, and have made admissions tantamount in the case of the chief actors to a full confession of guilt. The woman was murdered by two Daffals for the sake of her ornaments, worth about Rs. 150. The case has excited considerable interest in Agra and the neighbourhood.

THE Mayo School of Industrial Art, Lahore, will be opened on the 1st of November, under the superintendence of Mr. J. L. Kipling, its first Principal. The provisional course of study has been published in the *Government Gazette*. After an elementary training in outline drawing from the flat and the round, in perspective, light and shade, plant-drawing from nature, and in color, the student will be passed on for special and technical instruction. The advanced studies will comprise principles and practice of oriental design, modelling, moulding, architectural drawing, &c.

At first no fees are to be charged; but applicants must be furnished with satisfactory recommendations. If after a two months' probation the student fails to show any art faculty, he will be at liberty to betake himself to a more congenial pursuit. Twenty scholarships, varying from Rs. 5 to Rs. 10 a month, have been placed at Mr. Kipling's disposal.

BOMBAY.

THE appointment of a tutor to His Highness the young Gaekwar of Baroda has been postponed. The Gaekwar is thought to be too young yet to enter into a regular course of studies under the superintendence of a special teacher. Mr. Ambalal Sakerlal Desai was invited to Baroda a few days ago, and was personally offered by Sir. T. Madhava Row the head-mastership of the new High School at Baroda, on a salary of Rs. 300. Mr. Ambalal, who was in hopes of being put in charge of the tutorship to the young Gaekwar, refused the offer of the Minister.

OFFICAL news from Aden to the 15th of September says: "The endeavours of the Egyptians to discover coal at Zeyla were unsuccessful. It is reported that two of the Khedive's corvettes, the *Lateef* and the *Mahomet Ali*, have arrived at Berbera with Mekillop Pasha and Jamali Pasha, and that the place has been re-occupied by Egyptian troops, some of whom are encamped in tents. It is said that materials for erecting public buildings, a light-house, and a jetty, have been brought in the above vessels. We are further informed that preparations are being made by the Epyptians at Zeyla for an expedition against Hurrar. The report that Zeyla had been made a free port is now stated to be without foundation. The Egyptian corvette *Lateef*, with Mekillop Pasha on board, arrived in port on the 14th September."

A CORRESPONDENT of the *Times of India* telegraphs, under date the 23rd instant, the following harrowing particulars of the recent disastrous floods at Ahmedabad: "The Saburmuttee is a roaring torrent; bridges are completely swept away; trees, live-stock, native houses, furniture and other *débris* going down the river; the pumping-engine house washed down; the compound walls of Shaibag where the Prince of Wales is to stay, are washed down, as are also the out-buildings; the natives have sought refuge in trees. Your correspondent, with Messrs. Pendlebury, O'Connell Mathew Hargreaves, and others went to the spot by special train, and the waters rose so rapidly that the train could not get back, and the party were being hemmed in by the water. Your correspondent and companions were upwards of two hours breast-high in the water and waded and swam five miles, reaching Ahmedabad at night. Station and camp completely isolated from each other and from the city. Destruction in the city must be immense, as noise of falling buildings is continually heard, and it is almost entirely under water. All except the Mail Agent and the Locomotive Foreman have arrived from the river at Ahmedabad, but they are also considered safe. It is thundering, lightning and raining, but the waters are now rapidly subsiding. There is a heavy flood also at the Mahi river, but the bridge is quite safe."

THE Bombay Club is settling comfortably into its new home in the fine classical range of edifices between Watson's Hotel and the Post Office, terminated with the customary English want of architectural harmony, by a Corinthian bank of fine proportions at one end and by a Gothic shop at the other. The new edifice certainly vies in handsomeness of aspect and commodiousness of accommodation with Pall Mall club houses, but we are doubtful whether it may not be found scarcely adapted to the climate. Unfortunately the progressing buildings of the new law courts shut off much of the sea breeze, and the general form of the rooms seems modelled after what may be both elegant and agreeable in Paris or London, rather than what has been hitherto considered appropriate for India. As it seems to be *de rigeur* to wear English costume in the club, at all events in the late afternoon or evening, and as punkahs are not at present admitted, we should conceive it very likely to become too hot. Still the rooms are of noble dimensions, and it at all events possesses a most convenient position; far superior to that now occupied by the Byculla Club, which was itself infinitely better placed probably in the days when the Fort still retained its fortifications and Byculla was the fashionable suburb. Now the Fort is rapidly improving, with its fine edifices, esplanades and roads rich in growing trees, while Byculla appears to be disagreeably invaded by tall chimneys and the concomitant signs of the manufacturing activity, admirable in their way but not agreeable adjuncts to a club-house. One architectural blunder has been committed in the new club-house. It possesses a handsome staircase branching off to either side of a fine classical entrance-hall, but the steps have been constructed at much too steep a pitch. Indeed, they are so narrow and so steep as to be really fatiguing to surmount, and are sufficient of themselves to engender in any unperipatetic Anglo-Indian a thrist for soda and brandy. The decorations of the walls and ceiling are tasteful and appropriate.

DURING the recent enquiry held at Rajkote by Mr. Candy, Judicial Assistant in Kattiawar, concerning the claim set up by the Thakore of Palitana to tax members of the community on the occasion of their erecting temples and other edifices on the sacred hills in his territory, there was a considerable conflict of evidence as to how far—if at all—the Thakore had ever previously imposed this tax, or exercised any privileges of ownership over the hills in question. We now hear from a correspondent that pending decision of Government in the matter, the Thakore—it is alleged for the purpose of supporting the evidence adduced on his behalf in reference to this point—has forcibly ejected the worshippers in the temples, and other servants in the employ of the Sharawuk community; broken open the doors of cells or godowns; defaced old inscriptions on the temples and other buildings; and has placed on the hills a number of Mahomedan sepoys who have forced their way into the temples, thereby giving offence to and hurting the religious feelings of the community. In order, it may be presumed, to assert his right of possession, the agents of the Thakore have possessed themselves of the keys and other property belonging to the temples. We hear that a memorial has been prepared for presentation to his Excellency the Governor, and is now in course of circulation for signature. It appears probable indeed that the whole matter will be brought before Government for its interference. It will be remembered that a grievance of a minor character compared with the present cause of complaint not long ago gave rise to serious disturbances in Bombay between the Parsees and Mussulmans. It is satisfactory to find that the aggrieved parties in the present case—who are principally British subjects—have not resorted to similar means for redress; and it would be hard upon them if, by appealing to the Paramount Power, instead of taking the law into their own hands, they should find themselves at a disadvantage, or fail in any way to gain a full measure of justice in a matter touching so keenly upon their religious sensibilities.

IT will be remembered that a serious riot took place in Poona a short time ago, on account of the excitement caused in the orthodox portion of the Hindoo community of that city by the public preachings of Dayanund Saraswatee against idolatary. The eloquence of Dayanund Swamee gained him several followers, and they determined to do him honour by escorting him in full procession with an elephant and horses, with music and torches and some four hundred men from the camp to the city. Notice of this had been given to the public, and a large crowd, estimated to number some 5,000, assembled on the road near Bhide's Wada, where the Swamee was to deliver his last lecture. The honour that was in store for the Swamee not proving palatable to the orthodox Hindoos who were incensed to a soul at the Swamee's phillipics against idol worship, they started a counter-procession in which the centre of attraction was an ass. This animal was dressed in a blanket and decked with flowers, and led about the city preceded by a band of music. As soon as the Swamee's procession had arrived at its destination, it was overtaken by the ass procession, when the two meeting, there were hurrahs, shouts and of "victory to the ass," and so forth. The police interfered when stones and mud rained down promiscuously on them, and the Swamee's disciples and others in the lecture-rooom. The police captured the ass, and although outnumbered appeared to have kept their grounds but could not prevent the stone-pelting and mud-throwing by which many people in the lecture-room were hurt and several sepoys knocked down. This attack upon the Swamee and his followers lasted from about 8 to 10 P.M., when the Swamee was escorted home by a *posse* of the police, but was followed by stones. Out of this mob of about 5,000, only one wretched puttewalla and one miserable-looking Brahmin were arraigned for riot. These two accused were found guilty of having wantonly given sudden provocation knowing it to be such, and thereby caused a riot and were severally sentenced by Mr. W. R. Hamilton to three months' rigorous imprisonment and a fine of Rs. 500.

AT the request of the Bombay Underwriters' Association, Mr. Thomas Lidbetter, the Secretary to that Association, has placed on record in the shape of a pamphlet a really valuable digest of the various facts and statements connected with the loss of the unfortunate *Stuart Hahnemann*. This pamphlet will be read with interest by many as giving the only rational conclusions that can be drawn from sound nautical experience as to the causes that resulted in the foundering of that fine ship. Currency has been given to so many gross mis-statements concerning the build and masting of the *Stuart Hahnemann*, and the cargo she took on board in Bombay harbour that we cannot do better, than give Mr. Lidbetter's report of her in his own words. The *Stuart Hahnemann*, of 1,996 tons register, was built at Dumbarton, by Messrs. Macmillan & Co., in 1874, of iron. She was ship-rigged, and had lower masts, lower yards, topsail yards (upper and lower) all of iron; she had also double top-gallant yards. Her principal dimensions were: length, 273·7, beam, 43·1, depth of hold, 23·6. She arrived at this port about the end of December 1874, with a cargo of creosoted sleepers, coal, iron, and a few cases of goods, weighing about 2,460 tons, and after loading a cargo, consisting of 700 bags linseed, 1,691 bags myrabolams, 3,200 pockets myrabolams, 16,380 bundles coir-yarn, 13,637 bales of cotton, in all about 2,500 tons weight, and 176 tons of stone ballast, sailed again for Liverpool on the 4th day of April. After stating the date of the catastrophe that befel her, the latitude and longitude in which it occurred and such details as have been collected from the survivors, he goes on to say, what we take leave to remind our readers has been our expressed opinion from the first, namely, that it is impossible to accept any other conclusion that that the unfortunate ship left this port *under-ballasted*. "The capsizing," he says, "of a large loaded vessel of the beam of the *Stuart Hahnemann* is so very unusual an event, so altogether out of the range of one's experience that it may be deemed an exceedingly fortunate circumstance that some of her crew escaped to give us the particulars of the loss. We happen to remember the circumstances Mr. Lidbetter refers to of loading the *Richard Cobden* here in 1846, and his difference of opinion with the late Mr. Richmond on that occasion. The *Richard Cobden* did, it is true, escape accident that voyage, but we nevertheless incline to Mr. Richmond's opinion, and probably if Mr. Lidbetter were now loading the *Richard Cobden* even with all the advantage of cotton bales better pressed, he would hesitate about dispensing with ballast. "But why did the *Stuart Hahnemann* capsize," asks Mr. Lidbetter. There can be little doubt now upon the mind of anyone. The narrative of the survivors leads only to one conclusion. The ship was under-ballasted. But I acquit Captain Van Norden of any blame in the matter, as far as my judgment goes. Against her taunt masts and heavy spars, he had a ship of great beam to her depth, and he had put in what ballast he thought was sufficient. He had, moreover, taken the opinion of many other masters on this point of ballast. The exact model of the *Stuart Hahnemann*, completely rigged, with all her masts and yards and staysails, all in

due proportion to their actual size, would form a most important study to those interested in the stability of iron vessels of her particular build under sail. With the dimensions of the sails, the amount of square yards of canvas she had set, could be readily calculated, and the weights of her masts, yards, and spars, deck-houses, boats, &c. &c., above the main deck could all be arrived at sufficiently near for important practical purposes of comparison.

MADRAS.

HIS Highness the Rajah of Cochin, who has been invited in common with other Native Princes, to meet His Royal Highness the Prince of Wales in Madras, will leave his capital by the 3rd, so as to reach Madras on the 5th December next.

THE cotton mill at Indore is said to be prospering fairly. The mill which was established at a cost of from Rs. 9,00,000 to Rs. 10,00,000, employs 10,262 spindles and 228 looms. A still further extension of the machinery is reported to be in contemplation.

IT is reported that the Ranees of Tanjore have unanimously agreed and desired the Government Agent and Receiver to entertain at their own cost of Rs. 1,000 a month, a staff of establishment as a guard of honor and a suite to themselves and for the service of the adopted Prince, Maharajah Serfojee.

THE *Madras Standard* says that "the arrest effected at Trevandrum of the Coil Tambooran is likely to come before the Madras Government, and that, if a legal firm, to whom the Tambooran's defence has been entrusted, will do its duty, things will take a different turn to that which some people expect."

SOME time back an unpleasant dispute arose in Madras, regarding the refusal of the Rev. C. H. Deane, Protestant Chaplain of Bangalore, to bury Searjeant Spears of the 18th Hussars, who had committed suicide. At the inquest, it was decided that the act was committed by the Serjeant whilst in a fit of temporary insanity; and it was the refusal of the Chaplain to inter the corpse, after the verdict, which gave rise to the dispute. At the time of the occurrence, the Madras Government published a notification to the effect that clergymen are to hold the warrant of a coroner for the interment of a body as sufficient authority for performing the burial service—any Rubric to the contrary notwithstanding. The matter eventually went up to the Government of India for decision, and the following general rulings have been published for future guidance: viz—1st, Chaplains of the Church of England are compelled to bury the corpses of those who commit suicide whilst in a state of insanity—temporary or otherwise. The Coroner's warrant is to be their guide; 2nd, Church of England Chaplains are relieved from burying Catholics to whom Christian burial has been denied by their own Church, the military authorities arranging for such interment.

AT the meeting of the General Committee, held last Saturday evening, for arranging for the Prince of Wales's reception, it was thought that the reproduction of the native drama may have the effect of introducing something like novelty in the entertainment to be given to the Prince of Wales. The Committee at first threw out the suggestion. But Mr. Kistnama Charry told the members that the nautch, which it was intended to have, would be wearisome after ten or fifteen minutes, and he thought that the greatest variety that could be decently brought forward should be introduced. The reproduction of one or two scenes of a native drama would, Mr. Kistnama said, give the Prince a clue into the ideas of Government and its administration and the scenes of domestic affection among the people. A Tamil play, founded on the celebrated tale of *Nala* and *Damayanta*, which has also been published in English, may be introduced. The whole will not take more than 30 minutes and not more than Rs. 500 will be required for the dresses of the actors. Mr. Kistnama said that the greatest novelty in the entertainment would be the drama. The suggestion having been well received there will be two or more rehearsals, which some members of the Committee will witness, and if they are approved, the representation will take place at the pandal entertainment.

A CORRESPONDENT, writing to us from Cuddalore, gives the following curious piece of news: A wealthy Mussulman has settled down at a place called Nellycupum, about six miles from Cuddalore, on an extraordinary charitable mission; in furtherance of which he has invited all those who are in distressed circumstances, and need pecuniary aid, to bring to him all the money they possess, with a promise that he will repay double the amount. So people are flocking daily to him. He keeps a regular establishment of three writers, or accountants, who are paid daily Rs. 3 each, and their duty is to register the names of each of the people who bring money and the amount they give. I am told that those who have been to the man have actually received double the amount they took to him —Rs. 100 for 50, and so on. A remarkable fact is that the money he receives from the people he sets aside, and his own rupees, which are brought in baskets, are distributed. I am told he has several rooms stored with rupees, and that the amount daily distributed averages at two lakhs. One merchant, a ship-owner at Cuddalore, took Rs. 4,000, and received Rs. 8,000 in return. On the night of the 17th, twelve Mussulmans attacked his house for the purpose of robbing him; three men were apprehended, and the rest effected their escape. It is rumoured that the money he has with him must have been made by magic, and, it is said, that to protect the money from being stolen, a sheep is slaughtered every night, and the blood sprinkled on his heaps of treasure. As the place where I stay is only about three miles, I intend going over one day to see for myself. I hear the man was originally a Brahmin.

THE Hon'ble W. H. Gregory, in his address to the Ceylon Legislative Council, spoke as follows of the new Museum: "The Museum of Colombo which, for beauty of design and proportion, has answered my fullest expectations, is now ready for occupation, and I feel little doubt but that you will all agree with me that, in the construction of this building and of the new Custom House also finished, Mr. Smither, the Colonial Architect, has displayed not only skill and taste in the general outlines, but has devoted much labour of love to all the minor details which so materially affect the perfection of a building. As the Director, Mr. Haly, will be here next month, it will ere long begin to fulfil the uses for which it is intended. I referred in my closing address this year to the acquisitions obtained for the library; and a small but interesting collection of gems has been procured by the kindness of Mr. L. Green. The Museum will be worthily inaugurated this week by the great stone-lion, brought down from Polonnaruwa by the vigour and skill of Mr. McBride, the Provincial Assistant of the North-Central Province who had to encounter innumerable difficulties and risks. This stone-lion weighs about eight tons, and is supposed to have been the throne on which King Nusanka Mala sat and transacted business in his Hall of Justice. It was carved over 600 years ago, and though somewhat grotesque and conventional, is nevertheless highly effective. No one would wish to remove monuments of antiquity from their original site, if it be possible to retain them there in safety: but it is a question between their preservation and destruction. Another fine lion, placed, according to tradition, by the great Monarch Prakkrama Bahu the First, at Padavilkulam, was in good condition when Sir H. Ward visited that tank, but has since been completely destroyed by the ignorant cupidity of timber-fellers, who imagined its interior to be a receptacle for treasure. The report of Dr. Goldschmidt, now engaged in reproducing the ancient inscriptions of the island, will be shortly laid before you, and will be found full of interest to the antiquarian and philologist. The report of DeZoysa Mudaliyar, who has been engaged in exploring the Temple Libraries, will also be published. As the Government is solely animated by the desire of preserving from destruction all that remains of Singhalese literature, and has never wished to deprive the Temple Libraries of their manuscripts but has only sought to get them copied, I regret that DeZoysa Mudaliyar was met by an unworthy and jealous feeling at some temples, especially in the Southern Province near Matara, and refused access to the books preserved in them. The opening of the Museum, the reproduction of inscriptions, the copying of the ancient manuscripts, which is being vigorously prosecuted, and the transliteration of the second part of the great Singhalese historical poem the Mahawansa, by the learned Priest Hikkaduwa Sumangala, and the Pandit Batuwantudawa, and the expected translation of it by DeZoysa Mudaliyar, are proofs that intellectual is not neglected for material advancement.

BURMAH.

OUR relations with Burmah and China were attracting respectful attention rather than causing excitement at the date of the departure of the English mail. We do not, as our readers know, believe in the stability of things as they are in connexion with China, and the *Times* has some reflections upon the subject which are well worthy of attention. "Even a European power," our contemporary says, "would now find the Chinese a vastly more formidable enemy than they were thirty or even fifteen years ago. We should not get out of a war with China without having to pay heavily in men as well as in money. Nevertheless the issue could not be doubtful. We should assuredly be victorious, though the victory would have to be attained by blows struck at those parts of the Chinese Empire which feed our trade most copiously. But the result of which we should be most apprehensive, if we were again to be forced into a mortal struggle with China, would be the anarchy that would inevitably follow the defeat of the Pekin Government. The existing dynasty, already discredited, and secretly believed by the population to be effete, could not stand the shock of another disaster. The Imperial family would fall, and probably involve in their ruin the whole order of Mandarins, who have been practically trained in the work of administration. Both the elaborate official systems by which the provinces of the Chinese Empire are held together and the organization of the army would at the same time go to pieces. China would be splintered into a score of petty principalities, and, losing the long and potent tradition of its divinely ordained Government, could only be redeemed from social dissolution by the vigorous grasp of some civilized conqueror. But what nation would dare to accept the charge? With all our faith in the governing capacity of England, we own that we should recoil from the addition of two more Indias to that which we rule already."

ASIA.

THE Central Asian Trading Company seems to have been so successful, that a new company is to be formed with larger capital to carry on a trade which promises considerable profit. Mr. Russell proposes to have a great trading depot at Peshawur, as it is probable the Ameer will be able to bring the lawless tribes into subjection and establish free trade. With Leh there will be thus two trade centres. To Leh there are two routes, both through the Maharaja of Kashmere's territories, and after an interview with His Highness, Mr. Russell has succeeded in having a charter granted to the Central Asian Company, securing to them the right of trading direct with His Highness, taking the produce of the country, silks, shawls, and saffron, and disposing of them to the best advantage in the European and American markets; and on the other hand, introducing all European fabrics and other goods that are in demand in Kashmere at far lower rates than has hitherto ever been obtained. This information, which is taken from a correspondent to the Allahabad paper, is very satisfactory doubtless to Mr. Russell and the shareholders of his trading company, but to talk of free trade when a private company has secured all the advantages of the route to itself is, of course, absurd and cannot be the way in which the Government of India would wish to see the trade with Central Asia developed. Before the excitement of highly profitable adventures spreads further we would remind speculators that trading companies are, as a rule, failures,

they cannot compete with private traders; all experience in Europe proves this, and for further instructions on that point read Adam Smith. The trade with Central Asia is capable of extension, and much credit is due to Mr. Russell for his enterprising and courageous endeavours, which have apparently been successful; and, so long as they are limited, they may continue to be profitable, but the desire to get the monopoly looks rather suspicious. The following extract from the letter above alluded to describes the latest proceedings of Mr. Russell: "Mr. Russell having reached Kashgar in safety, the company did not think it necessary to keep the public informed as to the progress of what was purely a private enterprise, but waited until they had something definite to communicate. Delays and disappointments are inseparable from most commercial dealings, and these are very much increased when dealing with orientals. It is sufficient to say that after several months' anxiety, Mr. Russell disposed of such a large portion of his caravan, and saw the way to selling the remainder at such remunerative prices, that he considered that he had done his duty in Yarkand, and that his time and energies would be more profitably employed in India in arranging for the sale of the goods brought by the return caravan and feeling the way for future transactions. He therefore left Yarkand with a few pony-loads, leaving a relative (Mr. Dalgleish) in charge of the company's affairs, and after a wonderfully rapid march, reached Murree in safety. On his return he did not allow the grass to grow under his feet, but at once proceeded to make plans for the future. His experience in Yarkund showed plainly that although the prices to be obtained for English goods were immensely remunerative, still the evident shyness of the natives to deal direct with Europeans, and their peculiar method of carrying on all trade transactions, proved that as yet it would be better to induce them to meet us half-way by coming to Leh and there buying all the goods they require. That they are perfectly well-to-do is shown by the vastly increasing number of traders who come to Ladakh."

LITERARY.

PROFESSOR CHILDERS' 'Dictionary of the Pali Language' is one of those monuments of Oriental learning and research which appear scarcely once a century. The book is one which necessarily, by sheer force of merit, originality, depth, and scope, leaps at the moment of publication into the position of a classic in the literature of Ceylon. What Sir Emerson Tennant's book on Ceylon is to the European interested in that wonderful tropical island, Prof. Childers' work is to the Oriental scholar, native or foreign, to whom the speech, history, and archæological antiquities of that country are objects of study. Prof. Childers has ploughed, and sown, and reaped a rich harvest from a field which has never had due attention paid to it. His is the *first* dictionary of the Pali language. He has not had a stone of another scholar's foundation to build upon—not even the merest vocabulary. As a first work on such a difficult subject, Prof. Childers' Dictionary may be termed a truly marvellous result of patience, indomitable energy, and conscientiously laborious research. Of course, faults may be found with the work, just as faults might be found with a road roughly traced out over, and boldly pushed into an unexplored mountainous country by an adventurous engineer. Prof. Childers is just such a pioneer in a hitherto untrodden department of literature. Our readers should have their attention directed to one simple fact. We have mentioned that there is no other dictionary, or even vocabulary, of the language Prof. Childers has treated of, and yet the work before us contains *nearly fourteen thousand words and forty-five thousand references!* This will at least prove the industry of Prof. Childers. We are aware of the criticisms of Dr. Weber and M. Foucaux on the first portion of the Pali Dictionary. The criticisms of the latter are based on views of a metaphysical theory of the *Nirvâna* (final annihilation, extinction, absorption, or whatever it be), which any scholar may hold and any reject: any opinion on such a moot point does not affect the value of a dictionary. As for Dr. Weber, perhaps the perusal of the second part of Prof. Childers' Dictionary will convert him to a different estimate of the work as a whole. We only allude to these writers, seeing that Pali scholars who are, like them, qualified to express a scientific opinion on a book like this, are so rare. As for ourselves, we believe that, in the work before us Prof. Childers does himself full justice as the first European Pali scholar. In detail, and in the matter of minute particulars of arrangement, &c., Prof. Childers lays himself open to the strictures of the critic. Indeed, we are only surprised that this is not more glaringly the case in a book which is so novel and without precedent in Pali. But looking at the dictionary as a new work—as a work which reveals, more than any other work we know of, the internal tissue, the sinews and arteries and heart, and very spirit, of one of the most ancient but least noticed members of the Aryan family of tongues,—Prof. Childers' volumes must be regarded as a masterpiece.

GENERAL.

THE amount expended this year in providing annuities for those non-commissioned officers and men who have been decorated with the Victoria Cross will be £870. The sum is distributed in 87 rewards of £10 each. The amount does not vary much, for, as a death occurs, it generally happens that the gallant act of some man or another is recorded, and the vacancy is filled.

THE danger of a Caffre war in Natal is beginning to cause some anxiety to both the Colonists and the Home Government. There are about 350,000 natives in the colony; ten years ago there were only 200,000, and they are increasing so fast, partly by the excess of birth over deaths, and partly by immigration from beyond the border, that they threaten before long to "swamp" the English settlers. Physically, they are a fine race of men, as strong almost as Europeans; their bravery is undeniable, and they are great adepts at bush fighting. The Colonists number but 17,000, and are scattered so sparsely over the whole territory, which is nearly as large as Scotland, that it would be impossible for them to unite for mutual defence in the event of a sudden rising. The military establishment of Natal consists of half a regiment of infantry, two or three hundred volunteers, and sixty police. It is wonder that reinforcements have been called for. Sir Garnet Wolseley is maturing a plan for introducing the thin end of the wedge of civilisation among Langalibale's compatriots by placing white Magistrates over their "locations," and so destroying the influence of the chiefs; but the scheme must be worked out with great tact if it is not to provoke a collision, and will in any case require time to bring to a successful issue. Meanwhile, the Colonial Secretary insists upon the greatest care being taken to keep the peace. Experience shows that the cost of Caffre wars is always heavy, and in this instance, as the Colonists are quite unable to protect themselves, it would fall wholly on the British treasury.

THE *Pall Mall* gives us an account of the proceedings of certain swindlers in England, which may perhaps not be altogether new to the experience of people in India in connexion with mofussil Small Cause Courts: "Some ingenious swindlers have hit upon a plan for making county-court procedure an instrument of extortion. They operate by 'visiting the county-court districts, creating fictitious debts of not more than 40s., and selecting for their victims persons of responsible positions in London or elsewhere." The remainder of the process is simple. The swindlers then make false affidavits that the debt is due, that the defendant resides in a foreign district, and that the cause of action arose in that particular district in which the affidavit is made. The affidavits are made before the registrar, and the summonses consequently issue into the foreign district. If the defendant appears in court on the return day by attorney, no appearance is made by the plaintiff or by any one on his behalf. Very often the defendant is deterred (from the expenses which would be incurred in taking the journey to and from a distant place) from going to the court, and lets the matter take its chance, when execution will follow in default of payment. Ordinary persons who have thus been victimised do not care to 'throw good money after bad' in hunting down the extortioners, though the falsity of the affidavits on which the county-court summonses were obtained might be easily proved. These practitioners probably reckon on the fact that it is nobody's business to take proceedings against them, and as the cost to each victim is trifling they generally get off with impunity."

MILITARY ORDER.

ANDERSON, Lieut. H. A., to England for six months.
BEALE, Lieut. B. A., to England for fifteen months.
BLEST, Lieut. D. A., to England for six months.
BURLTON, Major N. R., extension of sick leave for six months.
CORRY, Surgeon G., to Landour to the 5th November.
CAMPBELL, Major C. W., to Europe for two years.
CRUTCHLEY, Major R. J. L., leave for three months.
O'DOWDA, Major J. W., permitted to return to duty.
FOSBERY Major G. V., to Bombay to the 6th Dec mber.
JONES, Lieut C. N., to England to appear before a medical board.
JARRETT, Capt. H. S., to Europe for one year, two months, and twenty-seven days.
MACKENZIE, Capt. R. S. M., to remain at Dalhousie to the 15th October'
MACNAIR, Capt J., extension of sick leave for six months.
SHAFTO, Capt. E. D., to England for fifteen months.
SANDERSON, Capt. H. B., permitted to return to duty.

CIVIL GAZETTE.

BENGAL.

BOSE, Baboo J. C, to be a member of the District School Committee of Chittagong.
BOSE, Baboo D. P., to be Secy. to the District School Committee of Jessore.

President—HIS GRACE THE DUKE OF ROXBURGHE, K.T.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

Age next Birthday	Yearly. Rs.	As.	P.	Half-yearly. Rs.	As.	P.	Quarterly. Rs.	As.	P.	Age next Birthday.	Yearly. Rs.	As.	P.	Half-yearly. Rs.	As.	P.	Quarterly. Rs.	As.	P.

H. M. MEHTA,
AGENT,
CALCUTTA.

THE LIVERPOOL, LONDON, AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	.. ..	£ 1,082,521
The Life do.	.. ..	244,607
The Annuities payable	.. ..	59,511
The Invested Funds	.. ..	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D. and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon:—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold: said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

1, 2, 3—markets at the foot of the hills.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to: (1) Haldwani; (2) Kaladungi (*viâ* Naini-Tal); and, (3) Ramnagar (*viâ* Khyrna). From Haldwani to Bareilly Railway Station 60 miles over a *pucka* cart-road; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road; and from Ramnagur to Moradabad 45 miles *viâ* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable: a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godown, and numerous out-offices, all slated; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given: failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,
Offg. Secy. to Govt., North-Western Provinces.

No. 1708A.

COPY forwarded to the Commissioner of the Kumaon Division for information, with reference to his letter No. 681, dated 23rd July 1875.

No. 1709A.

COPY, with 50 spare copies, forwarded to the Secretary to the Bengal Chamber of Commerce, with the request that the Notification may be distributed to all firms interested in tea cultivation.

No. 1710A.

COPY also forwarded to the Superintendent of the ——— with the request that the Notification may be published in the ——— not less than four times.

THE ROYAL VISIT TO INDIA

C. LAZARUS & CO.

Early orders are solicited, so as to allow ample time for perfect arrangements to be made.

Samples of Devices and Illumination Lamps may be seen, and prices ascertained, on application to

C. LAZARUS & CO.,
CALCUTTA.

PRINCE OF WALES'S ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No. 7, 10 and 11 Park Street.

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13th May 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, ESQ., C. E.,

Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.

Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary.

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

GREAT EASTERN HOTEL, *Calcutta, 17th January* 1874. NIAUDE, *Secretary.*

Calcutta, 28th December 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.
20 „ Soluble } Guano Phosphate.
4 „ Insoluble }
Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.
Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an in urance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August,* 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM. £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

C. LAZARUS & CO.,

No. 2, DALHOUSIE SQUARE,

CALCUTTA,

Agents for

J. DEFRIES & SONS,

BY APPOINTMENT TO

HER MAJESTY THE QUEEN,
H.R.H. THE PRINCE OF WALES,
H.I.M. THE SULTAN OF TURKEY,
&c., &c., &c.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

Candelabra,

On Plain and Jewelled Bases, elegantly Cut Crystal, Ruby, Emerald, &c., from 5 lights to 100 lights.

Lusters, Fountains and Fountain Candelabra.

Specialities and Novelties in India.

Wall Brackets.

Crystal, Ruby, Emerald, Opal, &c.

Girandoles.

Of novel Designs and very elegant.

Aquaria, Mechanical Birds in Full Song,

With beautiful Bouquets of Flowers.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2117.] Calcutta: Saturday, October 9, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

NOTICE.

SO much regret has been expressed at the discontinuance of the *Indian Economist* and its Supplements, that Mr. Knight has determined to publish on the 1st December next, the first number of a new monthly journal of Indian Agriculture, Mineralogy, and Statistics, the prospectus of which will be found in our advertising columns. The circumstances under which the *Indian Economist* was discontinued, have not been made public, and probably never will be. Suffice it to say, that the stoppage of the paper deprived the country of the only Agricultural, Industrial, and Statistical newspaper it possessed; and the new journal is designed to partially supply its place. The subscription will be Rs. 12 a year only, and Mr. Knight believes that he may count upon sufficient support, to warrant his announcing the publication without further delay. The new paper will be somewhat larger than the old *Agricultural Gazette of India*, and more comprehensive in its range, but will be strictly technical and in no way political or controversial. A limited space only will be allotted to advertisements.

EDITORIAL NOTES.

THE DOORGAH POOJAH holidays began on Monday last, and Calcutta is as dull and empty as it always is at this season. Every one that can, is making holiday in the Mofussil.

***

THE murder of Commodore Goodenough but a few miles from the spot where Bishop Patteson lost his life, is a very unfortunate event. The 'Sandfly' had been attacked last year at Carlisle Bay, and Commodore Goodenough, who was the senior officer on the Australian station, determined to visit the island in person, with the hope of conciliating the natives, and opening a friendly intercourse with them. He was well received on landing, and was about returning to his ship, the 'Pearl,' when the treacherous islanders suddenly attacked the visitors with poisoned arrows. The Commodore and two sailors were killed, and several Englishmen wounded. According to the established rule of the unwritten European code in these waters, says the *Spectator*, the 'Pearl' immediately burnt the village in which the treachery was perpetrated. The retribution was deserved, but it, unfortunately, defeats the object for which Captain Goodenough risked his life. The islanders of Santa Cruz will more than ever dread the approach of the 'great ships.'"

***

THE *Indian Mirror* has a long and loving notice of the late Professor Baboo Peary Churn, in whom it says "nature's best gifts were blended in harmonious unity. Charity was the principal trait of his character. It was his principle to lay by at least one-tenth of his income—he often spent more—for charitable purposes." During the Doorga Poojah he usually spent Rs. 200 in distributing clothes to the poor, and in winter he gave away Rs. 150 regularly for their benefit. "He was strangely averse to the miser's policy of hoarding money. He was once taken to task for that he had saved nothing for the future. "I have saved a great deal," he said, pointing to his sons, "there in those boys, you will find all the money I have saved. Haven't I given them a good education?" Another great trait in his character was his exemplary filial love towards his mother. He loved her, obeyed her like a docile child, and even adored her. We have been told that for twelve years, up to the time of his death, he was in the habit of drinking water sanctified with the foot-dust of his mother. A devoted son, a faithful husband, staunch friend and a loving father, eager to relieve distress and always willing for good, Baboo Peary Churn was the model of an educated gentleman; and when to these qualities we add his scholarship, his great acquirements, his wisdom, and his educational triumphs, he deserves to be remembered by the remotest generation of school students. His educational works will be a permanent monument of his research, learning, and skill. To Baboo Peary Churn belongs the credit of having rightly moulded at least half of the educated generation of Bengal. He has died but he has left a name that will never perish; and his numerous pupils will cease to remember him, with gratitude and affection only when they cease to exist."

"His life was gentle, and the elements
"So mixed in him, that nature might stand up
"And say to all the world, *This was a man!*"

***

WHEN the *Bombay Gazette* assures us that "the late meeting of "the Bombay Chamber of Commerce finally settled the question of "the unfairness of the imposition under the new tariff of 5 per cent. "on long staple cotton, and that not even Mr. Hope himself, "after all that has been said and written on this duty, would "probably undertake to defend it now," we take the liberty to demur to this open begging of the question. The *Friend of India* stands alone we are told of all the journals in India, in defending the imposition, and the writer adds as follows:—"The duty of 5 per cent. on Manchester fabrics manufactured from long staple cotton, which was imposed for revenue purposes only, is not a protective duty to the Indian fabrics, because no long staple cotton is used in Indian Mills. On the other hand, a duty of 5 per cent. on long staple cotton imported into India is a protective duty indirectly to Manchester fabrics, inasmuch as it prevents effectually Indian manufacturers from importing long staple cotton in order to compete with Manchester."

There is no affectation in our saying that this reasoning is quite incomprehensible to us. The five per cent. duty on fabrics is not we are told a protective duty, because India makes no goods of the same class. But she *purposes* to make goods of the same class; and if she fulfils her purpose, the import duty will then, we suppose, become a protective duty: will it not? And while five per cent. is thus levied on Manchester *fabrics*, how uncandid is it to maintain that the import duty on long stapled cotton does more than partially restore the balance? It is only want of honesty, or want of intellect, that fails to see this.

***

WE said a few weeks ago that were our present relations with the native States of India, but to give place to a clear and well defined and honest policy towards them, we should have nothing to fear from the neighbourhood of Russia; but that while we deem it safe to alienate from our rule the sympathies of men like Dinkur Rao and Salar Jung, it is vain to suppose that there will be no disaffection in the bazaars. Neither the Indian nor the Home public has any just idea, we believe, of the extent to which our Foreign Office administration of late years has alienated from us the native Courts of the country. What the end of it will be it is impossible to say. We doubt if there was a profounder feeling of disaffection towards us on the part of some of these States even in Lord Dalhousie's time. The men see but too clearly and too painfully, that our course towards them is not governed by what equity and morality require, but by our own interest. We should not dare to submit some of the differences we have had with the Native Courts of India in the last few years to arbitration, and safety lies, we think, in keeping their history secret. What good

the coming of the Prince of Wales can do. these circumstances, it is hard to imagine. There has never yet been a Statesman in the country with the courage to do what was right at all hazards, leaving the issues to God. The truth is we do not really believe in the moral government of the world, but have persuaded ourselves that it is necessary at times to follow the counsels of mere expediency. If the Prince were coming to redress matters that we know to be wrong, his visit would be the happiest event that could befal the country. But it is not so. He is coming simply to smooth difficulties over with gracious assurances that mean nothing, but a continuance of the insincerity with which we veil our conduct from ourselves. One righteous and noble act would do more to bring the people's sympathies round us than all the fireworks that ever blazed, or the Durbars that were ever held in the country. But we have not the courage for it. We hope by throwing the glamour of the Royal presence over inconvenient disputes to hush them into silence.

***

THIS is no reason of course why the revenues of a nation should not be raised as wisely and fairly as they can be, but a Government which is in the main just and beneficent should not be lightly or wantonly attacked for raising its income from any particular source, until some preferable and practical alternative can be plainly pointed out. The question is not—Does the collection of the revenue press heavily on the nation, but do the uses to which the national income is applied, produce benefits to the people which more than counterbalance the disadvantages experienced in its collection? When this question can be answered with a decided affirmative, popular writers—especially in a nation where the bulk of the people are less enlightened than the Government—should observe the utmost caution and temperance, in their attacks upon the justice of any important source of revenue. In a country like India, discontent should not be fomented by charges against the Government, made by those who are no better able than the administration itself to suggest a wiser and fairer course. It is easy enough to show, in fact it requires no showing, that the people of India would be better off if Government could give up, or greatly diminish, the salt tax. It is easy to be eloquent again upon the opium revenue, and there is no dispute that customs' duties are obnoxious and troublesome, and were they not necessary none would advocate their retention. But a great deal has been foolishly said and written both here and in England upon each of these sources of revenue, without an attempt to show us how we are to do without them.

***

A MODERN writer says truly, that during the last thirty years our public opinion, talk, and action in regard to Russia have been for the most part "exquisitely absurd." Newspaper writers and public speakers have "gone on denouncing the dark, deep, wicked designs of Russia, crying out monotonously that something must be done to keep her from India, while the only motive that could lead her into wanton hostility against us, would be resentment of our equally wanton hostility against her in 1854."

***

IT is a curious sign of the times that the great Roman Catholic divine Döllinger is openly denouncing the doctrine of Purgatory as a heresy imposed upon the Church by the Papacy. The truth is that Purgatory, as Dr. Pusey unintentionally shews in his *Eirenicon*, is a necessary consequence of the doctrine of Eternal punishment. The latter was felt to be so incredible, that it was necessary to supplement it with something that was less so; and while reserving Eternal torments for the Devil and a few of the most conspicuous criminals of the earth, to open a door of salvation for the masses of mankind, who were neither quite good enough for heaven nor quite bad enough for hell. A place of purgatorial, or purifying fire, was necessary for the many. The two doctrines cannot properly be separated, the one being the complement of the other. However unconsciously and undesignedly, the Fathers taught men that the Creator was cruel, and failing, by such means to make them Christian, roused a deep spirit of hatred in their enemies. A wiser and truer doctrine would have brought men more to resemble God, whose tender mercies are over all His works. There cannot be a reasonable doubt that much of what the early Christians had to endure, and much of the cruelty, which has marked Churchmen themselves, have arisen from; the doctrine of eternal torments. It is one of the painful necessities of this controversy that we cannot oppose this dreadful error, without appearing to be insensible to the perilous character of sin.

THE round of unhealthy excitement in which society in this country so unwisely indulges, has elicited some admirable remarks from the *Bombay Gazette*. "We never hear in this country" says the writer "of a season of *reflection*. All is hurry, selfishness, and railway pace. We have established a code of folly, that is as strictly carried out as Mayne's Code of legal procedure. In Poona, at the Hills, and in Bombay during the season, English men and women all converge to one point, and that one centre is amusement. No one wishes to stop amusement, so long as amusement does not stop everything else. But if balls, Badminton, Polo, pic-nics, flirtations, rides, drives, and dances are to take up the entire time of young people, it does not require a very keen-sighted sagacity to see that we shall present a national spectacle to Asiatics that will not adorn the English name in India. Kingdoms that gave themselves over to luxury and idleness have passed away from the, page of history, simply because no one erected a breakwater to stem the wave of fairy enchantment, and to stop the continuance of an enervating system of life. Does this system of perpetual motion, this custom of living for ever in the public gaze, and making the twelve months of the year one long "season," add to domestic happiness? It was formerly our boast in contradistinction to the habits of the French that we lived by our firesides. Why, then, do we try to efface the lustre that gathered round English dwellings where a girl was happy in her mother's drawing-room, and looked forward to a ball three or four times a year as a treat and an indulgence, the memory of which would make home happy and not distasteful? Men do not care to marry young ladies whose highest aspirations are dancing and excitement. They will dance with them, talk, ride flirt, with and admire them, and like the Knight in the song, 'love but ride away.' The girl who but now and again appears at balls, races, and pic-nics, carries all before her. Animated by the novelty of the pleasure she looks intensely happy. Partners crowd round her, and her card fills by magic. She is not pale from late hours, or oppressed by the fatigues of a never ending season Her heart clings to the sacred memories of home, and her soul is not worried as to who is the most eligible man to catch for a husband. The rightman comes quickly enough to her side. She has not to wait for him, and he rejoices that his bride is not the left off hack of half a dozen visits to the hills. These observations may be unapalatable to some men, and perhaps mistaken by some young ladies, but the views are legitimate, for they are the echo of the voice of prudence; they are ideas of right and reveal truths even in the giddy hours of an Indian season."

***

ONE of the speakers at Bristol the other day gave an interesting account of the late archæological discoveries in Kent's Cavern, near Torquay. He said a friend had asked him if these discoveries proved man to be more than 6,000 years old, and his reply was, "Yes; and if you were to add six other noughts to those figures they would still not be noughty enough." The immense antiquity of man said the speaker, may be considered as proved, though the number of noughts may never be established. "But how slow must have been his development and for what a length of time must he have been engaged in a doubtful conflict with other terrestrial inhabitants. His lordship over the animal kingdom was doubtless established after a long and difficult warfare that prevented the rapid increase of population. The slowness of increase among men in these hidden ages, must have kept pace with the slow development of their faculties. But many strange questions arise in connection with the inquiry as to how man could have existed for so long period on the earth, without over-populating it. At the present day, we see races completely dying out to make room for new-comers. How many races may have died out in this manner, and how many, if the world lasts and man multiplies and otherwise makes progress must still die out, before "that great race that is to be" shall make its appearance.

***

AN interesting discussion followed the reading of a paper on, "The National Standard of Education," by Mrs. Grey. Sir Willoughby Jones alluding to the fastness and frivolity of the girl of the period, accounted for the sad estate into which modern girldom has fallen by the character of the literature on which they are so largely nourished. "The repulsive garbage of modern fiction with "which the houses of England are flooded is, perhaps, the main "cause of the frivolity, love of dress, extravagance, and what I may "call the fastness of the girls of the present day. Modern fiction "is the greatest curse of this nation." This heavy double onslaught on modern girls and modern fiction, delighted the audience immensely, and we observe that the old-fashioned notion that modest ladies should not join in the clapping of hands in a public meeting, was not allowed to interfere with the heartiness of the

applause. We are of course bound to suppose that the smiles and clapping of hands came from an audience, from whose pure consciences the arrow of the accuser glanced off into space. They must have felt that they were not girls but ladies, and that the charge of frivolity and extravagance did *not* apply to them. Otherwise there ought to have been crimson cheeks and drooping of heads, instead of enthusiastic clapping of gloved hands. But we suspect there was a dash of insincerity in this vigorous reprover of sin. Isaiah never hit harder against the ladies of Jerusalem but there was an earnestness in his denunciations which elicited something different from smiles and clapping of hands.

Sir Willougby Jones was only half in earnest, and if his remarks had really caused confusion of face to his fair hearers, would doubtless have been heartily sorry they were uttered. There was some truth in his accusation, but it was so far exaggerated as to fall quite ineffectual, and lie open to the complete contradiction of succeeding speakers. Lord Aberdare denied that modern literature is of the character ascribed to it, and Miss Becker rebutted the charge of frivolity which she said was absolutely untrue, if brought against women as a class. Men, she said, seek to make a reputation for wisdom by calling girls frivolous, but "instead "of continually sneering at our so-called frivolity and folly, it would "be more manly and sensible to give us the strong right hand of "help towards something better." We trust Sir Willoughby smiled and clapped *his* hands at this keen retort.

***

HAD Sir Willoughby expressed himself in more measured language, his remarks would have done good. But a serious question arises as to whether literature has injured ladies, or ladies literature. For much of the garbage of modern fiction is produced by female writers. A glance at the pages of our literary periodicals is sufficient to show that a large, if not the larger, share is so produced. There are a few female names that are an honour to our literature, but the majority of our works of fiction by lady authors are very sorry stuff indeed, and in not a few of them the sentiment and morality are exceedingly flimsy and far from pure. And even while we have the greatest, admiration for the works of Charlotte Bronte and George Elliot, there is no doubt that one great effect of their writings has been to deal a blow at much of the convential fencing that was wont to protect ladies, as divinity is said to hedge a king. That the result will be beneficial in the long run is nevertheless certain but every revelution is attended with abuses, and the emanciption of women from so many of the old-fashioned restrictions, is no exception to the rule.

***

"NOWHERE does the truth of the existence of hell and eternal torments for the damned, shine more resplendent than in the pages of the Bible." We take this sentence from the columns of a Catholic contemporary as itself of too shining a character to be left unnoticed. It is followed by the well-known quotation from Isaiah about the "devouring fire" and the "everlasting burnings" which gives occasion for the writer to remark that in contradistinction to many modern prophets, the voice of Isaiah is heard "proclaiming God's immutable truth in all its glorious fulness." Such writings leave on the reader the impression that the writer exults in the belief of eternal torments for the lost? We cannot suppose such to be his state of mind, for though we have heard preachers teach that at the day of judgment the saved will be able to praise God for consigning to endless anguish even their own lost relatives, we have seldom met any who had acquired such strength of mind in this life. Most believers who receive the doctrine, receive it with trembling.

***

ATTENTION has from time to time been called in our columns to the attitude of the Romish Church on the subject of marriage. Mr. Gladstone in the preface to the collected issue of his recent tracts, illustrates his statements by a case in point:—

"More than thirty years ago X., a male British subject, was married to Y., in a foreign country, but under the provisions of an Act of Parliament, by the chaplain of the British Legation, in the house and in the presence of the British Minister. Both professed the religion of the English Church. They lived together for more than a quarter of a century; and a family, the issue of the marriage, grew up to maturity. In the later years of this union, the husband formed an adulterous connection with a foreign woman. After a period of much patience on the part of the wife, a separation took place. In a short time he joined the Church of Rome; and, about four years ago, under the authority of certain Roman ecclesiastics, and in an English Roman Catholic Chapel, he went through the form of marriage with his partner in guilt. He was subsequently informed by a higher functionary, that he must obtain a judgment from Rome. He made application accordingly, and the judgment given was, that the original marriage was null, and that the second so-called marriage, so far as appeared, was valid, In the meantime, the injured wife had applied to a Court for the judicial establishment of her position. She was duly declared to be the lawful wife, and the bigamous husband admitted that she was such according to British law. Within the jurisdiction of that law, he had taken his paramour to his paternal estate in —— shire, and had designated and caused her to be addressed there, as his lawful wife; to the great scandal of the neighbours, who were well acquainted with the true wife. He likewise entered his spurious offspring, born since the pretended marriage, as legitimate; and a witness of position and character on the spot asserts that the woman received visits, and the most marked and open countenance, at the husband's seat, from Roman Catholic priests and Sisters of Charity. If there be those who doubt the allegations I have made, I have only to state that Cardinal Manning is sufficiently cognisant of the case, and will best know whether he can contradict them. Other Roman prelates are, I believe, in the same condition; but I do not wish unnecessarily to localise or identify the narrative."

***

A CURIOUS literary discussion has been going on at home concerning the "speech of some dozen or sixteen lines" which Hamlet proposed to insert in the play about to be acted before the Court, and which were intended to "catch the conscience of the king." An attempt has been made to indentify them. Professor Seeley pleads strongly for the lines beginning, "Purpose is but the slave of memory," chiefly on the ground that they represent well the character and sentiments of Hamlet. Mr. and Mrs. Clarke in their *Illustrated Shakespeare* have expressed the same view. Against this opinion, very conclusive arguments have been advanced by Mr. Malleson in a paper published by the New Shakspeare Society. Hamlet's intention was to "catch the conscience of the king" by a representation of his guilt, and so to obtain complete evidence of the truth of the ghost's revelations. But the speech pitched upon by Professor Seeley contains nothing but a lot of maxims which, though they have a bearing on the conduct of the queen, contain no home-thrust at the king. Also he argues that Hamlet in his advice to the player, counsels him to observe temperance of action even in the "torrent, tempest, and as I may say, the whirlwind of your passion," whereas there is not a line in the speech adopted by Professor Seeley, that rises above the height of a moral maxim. So far Mr. Malleson has certainly the best of the argument. But when he proceeds to point out the speech which he believes to have been inserted by Hamlet, we are inclined to think that he gives the truth but not the whole truth. He declares in favour of the six lines, beginning "Thoughts black, hands apt, drugs fit, and time agreeing" with which the play breaks off, or rather is broken off by the excitement of Hamlet and the abrupt departure of the conscience-stricken king. Professor Seeley's weak objection that the speech must contain the proposed "dozen or sixteen lines" is sufficiently met by the supposition that the speech was not concluded. It seems to us however, that the critics are wasting their powers, and that the whole play, though cast by Shakespeare in the mould of those he wished to imitate, is meant to bear throughout the marks of Hamlet's touch. It might even be argued with better reason that the whole was set down by Hamlet for the players, than that any six or sixteen lines can be identified as his. It was after he had asked the players to play the murder of Gonzago, that he expressed his intention of making them "play something like the murder of my father, before mine uncle." And after it was over he asks Horatio, if what he had done would not "get me a fellowship in a cry of players, Sir." This, we think, indicates that he had done more than insert a few lines at the close of the play. The whole is brief enough to have been learned by the players in the course of a day, and if we can conclude anything on the subject at all, we should say that the whole was either composed, or modified throughout, by Hamlet.

***

PERE HYACINTHE affirms that between the Ultramontane party, the Radicals, and the Christian Catholics, there is a profound misunderstanding of the word Church. "The first two take it in a human sense: we interpret it in its Divine. For them it means first of all, forms; for us it means above all, spirit. The Church of Christ, become the Church of forms, will be nothing less than an immense Pharisaism, more or less disguised under false Evangelical colours. And whether the guardian of this Pharisaism resides in the Vatican or in a bureau of public worship

whether its regulations are elaborated in a Council of bishops or in a Legislature of unbelievers, the Œcumenical corpse or the national, will be nothing more than a dead body, for the Spirit of Christ will have gone out of it." Episcopacy, adds the Father, though attacked by Protestantism in the name of liberty, and by Ultramontanism, in the name of authority, has been the safeguard of faith for them both. It protects the Church from infidelity and anarchy on the one hand, and on the other from *coups d'etat* and revolution. "I speak of a really Catholic episcopacy, which "neither abdicates in favour of a Pope, nor of a false religious "democracy. The episcopacy of the present day is divided into "three great fragments—that of the Roman Catholic Church, the "Greek Catholic Church, and the Anglo-American Episcopal Church. "The Council of the Vatican has widened the breach that separated "these fragments into a gulf; but the decree's of that Council will "not stand, and once again as of old, God will bring light out of "darkness, and good out of evil."

***

In a recent article on the *Modern Indigenous Literature of British India* in the *Calcutta Review*, we find references to certain books lately issued from the native presses of Bengal, particularly of Calcutta and Dacca, which are described as containing "much that is indecent," "songs disgustingly obscene," "most indecent and immoral poetical effusions," and "an obscene drama." One book which is "obscene from beginning to end," consists of a thousand copies in Bengali, and another even worse of two thousand copies. Similar charges are made against other books in the list published quarterly in the local official Gazette. Not long ago, we had under the windows of our drawing-room a man nearly nude, chanting at the top of his voice in Bengalee the most obscene songs, apparently for the mere purpose of outraging the men and women bathing in the public tank, or passing along the street. And yet we profess to have in Calcutta a society for the suppression of obscenity; and a censor of the press in the interests of public morality. It is well known also, that something very like what would be regarded as treason in other countries, is being published in the vernacular languages, in the shape of dramas, song, and newspaper articles. How is it that we never hear of a prosecution for such publications?

***

The censorship of the press has been carried to greater lengths by the Church of Rome, than by any other power, ancient or modern. The *Indices Expurgatorii* of Rome drawn up from time to time by Papal authority, specifying the books or passages therein which are condemned, and to be suppressed, expunged or altered are not made public. These Indices are guarded as carefully as the Freemason's oath, being intended for those only by whom they are required for the execution of their provisions. Under these Indices many standard works in theology and especially of the Christian Fathers have been published with the condemned passages left out while no notice of the fact is ever given to the reader. The publication of the Indices would of course destroy their *raison d'etré*. Whatever copies have made their way to the public, have done so through the instrumentality of those who have been anxious to discredit them and their authors. Of course the censorship of these Indices is dishonest, and the works of the great dead are mutilated and changed to suit the views of Rome, and then published to the world as the *bonâ fide* opinions of the authors whose names they bear. Full copies of these Indices would be of incalculable value, as pointing out the special passages in Roman Catholic authors and in the Christian Fathers which have been suppressed.

***

Besides these *Indices Expurgatorii* which are seldom accessible to the public in their original editions, there are also *Indices Prohibitorii*, or *Indices Librorum Prohibitorum*, containing, among other matter, catalogues of books that are wholly prohibited, and lists of authors all whose works are condemned. These are are more or less accessible. We have two copies now before us. One of them, that of Sixtus the Fifth, is almost as rare as an *Index Expurgatorius*. Not a copy of it, we believe, can be bought at Rome, and though a new edition, including the latest condemned publications, is published by almost every Pope, the work is not so accessible as the Roman Catholic correspondent of a contemporary would lead his readers to suppose. So ignorant are the laity of these books in countries where their provisions cannot be enforced, that they are disposed to question their existence altogether. It is impossible to get them in India, and difficult to get a copy even in Ireland. The cause of this may be learned from what was stated by Sir Robert H. Inglis in the House of Commons: "The volume which I hold in my hand, the *Index* "*Librorum Prohibitorum* contains a list of the books which are at "*this time* proscribed in the Church of Rome, under the penalties "of the inquisition. It was printed at Rome by authority in 1819, "and I bought it there in the college, I think, *de Propaganda* in "1821. The first book in this great catalogue of books which are "taken from the faithful everywhere, and are given up to the "Inquisition is *Bacon de Augmentis Scientiarum*." The Bible in *all* vernacular languages without any distinction, Protestant or Catholic: Burnet, Milton, Goldsmith, Hallam, Addison, Young, Hume, Locke, Robertson, have all been put upon the Index and the possessing or reading any of these is authoritatively declared to be deadly sin, entailing excommunication. On these Indices we find the greater part of the writings of the good and wise of every age and country. Not only could a good library be formed from the books thus condemned, but an almost *perfect* one, perfect indeed for all purposes of utility. As with many other matters, the abuse of the censorship makes those who love freedom of thought, look askance at almost any interference with the press that can be proposed. Certainly, there is much in India that *primâ facie* would justify its imposition. At all events there should be sufficient oversight to secure the suppression of indecency and the punishment of its authors; while even this appears to be lacking in this city.

***

In commenting on the Indian Budget, the *Times* insists that the increase in the loss on Exchange, which now amounts to more than a million, requires explanation urgently, and says that it should be considered in connection with "that transaction on which the "Indian administration plumes itself with so much satisfaction—"the raising of a loan of £2,500,000 in Calcutta in June last." The Government evidently thinks that nothing could be better than the terms on which this loan was raised; but the *Times* rightly insists that the question is not whether the rate at which it was floated was good at Calcutta, but whether better terms could not have been obtained in London, and then comes the second question, whether raising the loan in London would not have saved the cost of remitting the same sum from India to England. "The average "rate of interest is so much less in Lombard Street than in the "bazaars that we are arrant disbelievers in the economic advantage "of the process which the Indian Government announce their "intention of consistently repeating. The supposed political "benefits of borrowing money in India, so far as they are not "chimerical, are, in any case, too dearly bought."

***

A contemporary says that the Government of India has expressed a desire to be furnished with the following information concerning the production of Cotton in Bengal:—(1) Total area under cultivation in acres in each district: (2) species cultivated. (3) sowing time. (4) gathering time. (5) total out-turn of each district of cleaned cotton. (6) quantity of seed required per acre. (7) average outturn of cleaned cotton per acre. (8) average selling price of cleaned cotton. (9) total estimated value of the crop. (10) total quantity exported from each district. (11) total value of exported cotton. In view of supplying this information, the Bengal Government, we are told, have addressed a circular to all Commissioners to submit this information in the form of a tabular statement at the close of the current year, 1875-76, for the first time. Our contemporary must have been misinformed, the whole of this information having been obtained in tabular form for 1873-74 long since.

***

It is equally satisfactory and strange, to find such writing as the following in the *Bombay Gazette*. "It is notorious that from the value of the produce exported from India about thirteen millions sterling must be deducted, as the sum payable every year in England for the cost of Indian administration, before any return in the from of bullion is made to this country. In other words, the demands of the Government reduce by thirteen millions a year the amount to be paid to India in satisfaction of her natural claim to receive the value of her exports. There is so much less money to be remitted to India; the demand for means of remittance is consequently decreased in a corresponding degree; and the fall in the exchangeable value of the rupee is accelerated beyond the rate at which it would proceed in the ordinary course of commerce. But ten years ago, the effect on exchange of the Government of India's home expenses was wholly counterbalanced and effaced by the regular importation into India of nearly an equivalent amount of English capital for the construction of railways and other public works. The railway companies, instead

of directly trasmitting their capital to India, paid it into the Indian Treasury at Home, receiving credit out here for the amount so paid in; and in this way the Home charges ceased for many years to have any appreciable effect on exchange. But since the practice of constructing Indian railways with capital borrowed in England was discontinued, the consequences of the annual drain of money from India to pay the Home charges have been felt in their full force." A very few years ago, all this was absolutely denied by our contemporary in the most positive manner.

MR. STEVENS.

IN some respects, we probably have the most feeble Government at this moment, that India has seen for a long time. It is feeble to the verge of cowardliness. Every one remembers the main facts of the Stevens case. The Calcutta community, considerably excited concerning the Meares case, conceived a strong belief that Mr. Stevens was innocent of the murder charged upon him, and was simply the victim of a conspiracy on the part of the coolies on the estate and of the local police. We do not venture to say who was to blame for it, though we have our opinion upon the point, but the case was placed before the Court in such a shape, and upon evidence so grostesque and conflicting, that a very natural feeling of indignation arose in the community that any man should have been dragged down from a distant province like Assam, to answer to such evidence before a jury at all. The feeling was so strong, that the Government after some delay deputed a commission consisting of Mr. Frank Cockerell, and Mr. Hem Chunder Ker (one of the ablest of the native Magistrates of Bengal) to investigate the history of the case upon the spot. It is now nine or ten months since these gentlemen made their report; and in answer to the call repeatedly made for it in the *Friend of India*, the public is at last favored with a semi-official paragraph on the subject in the *Pioneer*, introduced by certain remarks of its own that ought not to pass without notice. The writer begins thus:—

"An innocent man committed for trial for murder, even though he may be acquitted by the higher court, cannot be expected to forget the circumstance very quickly, nor to forgive the magistrate who, however honestly, made so disagreeable a mistake, nor can his friends fairly be asked to put the whole affair lightly aside, and beg the police to accept their assurances of unalterable regard."

There will not be much difference of opinion we think as to that; and the reader would suppose from such an introduction that the case against Mr. Stevens had proved to be one of this nature. Now we have not seen the report, but there is very strong ground for believing, that instead of shewing Mr. Stevens to have been the victim of a conspiracy, the Commissioners have no doubt that the unfortunate man Habiram was really murdered by some one or other; and that whether Stevens was the murderer or not; there is no room for charging the people on the factory with having trumped up the charge against him, nor the police with having lent themselves to the conspiracy. Indeed all this is allowed in the paragraph communicated to the journal, as the reader will see. For it runs thus:—

"It has been finally determined that no evidence discloses any conspiracy by the factory servants, or by Habiram's family to accuse innocent persons. Nor was the accusation the result of a plot on the part of the police. Indeed, Mr. Cockerell seems to have thought that there was a *prima facie* case against the accused persons, which justified the local authorities in the course they took."

The result of this special enquiry therefore upon the spot, instituted by the Government to allay the public disquiet, is to show that murder or manslaughter was really committed by some one upon the wretched Habiram; and that whoever the guilty man was, there was certainly no conspiracy to fix the crime on Mr. Stevens either on the part of the witnesses or the police. But the Government has not the courage to tell the world so, because a subscription has been got up for Mr. Stevens; and the Landholders' Association would be grievously disappointed at the disclosure. It is hard to say which is the more cowardly of the two: the Government speaking for itself, or the *Pioneer* speaking for it. Thus the former says apologetically:—

"We can understand that the papers are not quite satisfactory to the Association, and that their publication will hardly appease the sore feeling which seems unfortunately to impair the relations of the planters and magistrates in Assam * * * Anyhow, it is impossible to make out now what really occurred, according to the conclusion at which the Government arrives at Mr. Cockerell's instigation, (*sic*) and this is said to have been due to want of vigor and intelligence on the part of the local authorities at the time; so the police and the magistrates come in for a certain amount of censure but not by any means for the crushing retribution the planters would no doubt like to see inflicted. There are, however, to be separate orders on the conduct of the magistrates and police, and in this way the planters may eventually get satisfaction to some extent."

It is impossible to repress the indignation which the attitude assumed in this paragraph calls for. The planters are powerful, and can make themselves heard, and have the lawyers behind them, while the murdered man belongs to a class of which the Government has no fear whatever. It is not the miscarriage of justice that the Government deplores, or that a man has been murdered and his murderer not been found. What the Government deplores is that it is unable to convict its own magistracy and police of having conspired with the coolies to charge the murder upon Mr. Stevens! It has done all it could in the matter, and "the police and magistrates are to come in for a certain "amount of censure which will, it is hoped, give the planters "satisfaction to some extent, though the crushing retribution" which they wanted is impossible: because there really was a murder by *some* one, and there really was not a conspiracy by *any* one. The Planters, we take leave to say, are *Englishmen* and do not want this sort of thing from the Government; they will feel as humiliated on reading it as ourselves. It is hard to say whether we are to ascribe to the Government, or to our contemporary, the final words of the article. The reader should look at them attentively:—

"The treatment of Mr. Stevens, whom we have no reason to look upon otherwise than as innocent and deeply wronged, is a subject which the Government cannot but have witnessed upon (*sic*) with profound regret, not merely in the general interests of just administration, but on many other grounds as well."

We are here assured that the Government looks upon Mr. Stevens as innocent and as deeply wronged, and views the treatment he received with profound regret; not merely "in the interests of just administration, but on many other grounds." Now let the *Pioneer* itself state the facts:—

Our readers will remember that Mr. Stevens, the assistant manager of an Assam tea-garden, was committed for trial in the early part of last year on a charge of murdering a factory servant about the same time that public feeling was very much inflamed in reference to the deplorable Meares case. At the High Court in Calcutta, however, Mr. Stevens was acquitted very emphatically, as the jury refrained even from hearing the defence. They held that the charge broke down by reason of the inherent weakness of the evidence for the prosecution. Under these circumstances it is more than probable that the Government would spontaneously have instituted an inquiry into the way in which the charge arose. But the Landowners and Commercial Association, without waiting for this, pressed for a special investigation, and finally Mr. F. R. Cockerell, C. S., was appointed by Government to look into the whole case. The subject is sufficiently interesting to warrant in us recapitulating the facts as brought out, we believe, in Mr. Cockerell's report, and a subsequent resolution by the Government of India. The murdered man was a native named Habiram. Mr. Williamson, the manager of the factory on which he was employed, lent him a gun to enable him to shoot game. Afterwards Mr. Stevens, the assistant manager, demanded this gun back; Habiram refused to give it up except to Mr Williamson. A dispute ensued; Habiram was at the factory on the 10th of April; four or five days afterwards his body was found in a jungle; and on strength of these coincidences, coupled with native evidence afterwards alleged to have been the result of a conspiracy, Mr. Stevens was committed for murder.

And here the journalist stops dead. But the native witnesses declared that "the dispute," as our contemporary euphemistically terms it, brought on a violent quarrel in the verandah of the factory, and upon the man's refusal to give up the gun Mr. Stevens struck him repeatedly over the head with a ruler and that the man was killed then and there. And although there is no reason to believe that this story was concocted either by the coolies or the police, but every reason to believe that the man met his death *generally* under the circumstances stated, in other words that Mr. Stevens killed him in a passion without intending so to do, we are to treat him as "deeply wronged" and "as innocent" and as deserving of sympathy; and our own magistrates worthy of something short only of "crushing retribution," that they cannot make native testimony other than it always is—a tissue of absurdities with a clew of truth running through it nevertheless. The truth is our forms of justice are unsuited to the country, and we should deserve to be despised by our readers if we concealed from them our own belief in this case. The attitude of the Government towards it is as cowardly as that of its exponent. It appears to be afraid to publish the report of its own Commissioners, because

it knows the report will be distasteful to the dominant class to which it is anxious to give "some satisfaction!" Alas!

COLONIZATION.

The Central Provinces.

It is admitted that on the most favourable view, the Central Provinces are but scantily populated, and that their development is greatly retarded because of this. Now although reasons have been adduced by us for questioning the remedy proposed by the Chief Commissioner, and although not even an approximate solution of the emigration question has we fear been arrived at therein, there are certain checks on the increase of population in the Provinces which if removed, would lead to a rapid increase of the people. One or two of these checks we now propose to notice. The most serious of them, is the very large emigration that has been going on for six or seven years past. The census of 1872 showed that the district of Bhundara had lost in five years, upwards of 40,000 souls out of a total population of 6,08,000; the Jabulpore district had lost upwards of 70,000 out of a total population of 5,99,000; the Seoni district some 14,000 persons out of a population of 4,21,000. And although the districts of Nursingpore and Hoshangabad had gained 16,000, the gain was more than counterbalanced by the heavy loss in Jabulpore. In the latter district, the famine of 1869 is credited with a great part of the loss, but it is well known that the mortality among the famine-stricken immigrants from Rewa, and other native States, attracted by the district relief works, was very great. Now it can scarcely be maintained that the famine of 1869, not only swept off the natural annual increment of 600,000 people during five years, but 70,000 more in addition to that, and it is certain that there must have been emigration to other districts or States. In the case of Bhundara, this emigration has the Berars for its destination; and it extends not only to Bhundara but to the Chanda and Nagpore districts, and the Kuttingee tahsil of Balaghat. In the administration report of the Berars for 1872-73, it was estimated that since 1863 upwards of 54,000 persons had emigrated into the Berars from the Central Provinces, of whom less than 10,000 had returned. And there is no reason to suppose that the tide has been stemmed. Other smaller streams flowed from Nimar into the Gwalior territory, and from the Chanda and the upper Godavery districts into the Nizam's country but they are trifling and need not be considered. Such losses on so small a population are most serious, and before any immigration scheme is broached, it is desirable that the true causes of this emigration should be discovered and a remedy applied. Well; we wan to know whether the district authorities possess any reliable data as to the causes that produce it? A scheme of immigration such as has been discussed, sinks into insignificance by the side of this enormous emigration; an emigration which might attack the new colonies as well as the old inhabitants of the Provinces. It is clear that the Chief Commissioner should first of all grapple with this question, before he attempts to found colonies. Until this exodus is recognised, it is useless to discuss such schemes as the present. The case of the Bhundara district is most striking. It adjoins Raipur, a district upwards of 11,000 square miles in area, of which only 4,000 square miles are unculturable with about 3,500 miles cultivated: a district with the very light assessment of 7·11 annas per acre only, and possessing some of the richest land in India. Why is it then, that the Bhundara ryots instead of emigrating into the Raipur district, prefer to travel 100 or 150 miles to the Berars? Why do they emigrate at all? Is the land assessment too heavy? It would appear not; for enquiry is said to have led to a very trifling reduction over the whole district. Are our land tenures unsuited to the people? Or is the action of our Civil Courts, and of the sale law relating to land, oppresive? If not, what gives rise to the exodus, and what remedies does the Chief Commissioner propose? The following are the views of the Commissioner of Berar on the subjec, an officer who has served both as a Settlement and as a district officer. (Administration Report for 1874 page 106) "I have "heard it alleged that the main cause of the immigration from "the Central Provinces into Woon, is that our rent rates "are so much lower than those across the Warda. In the first "place, I doubt whether they are lower; and in the second I "do not think that the rent affects the question at all. It "*is that the position of nine-tenths of the agriculturists.* "*in the Central Provinces is that of tenant-at-will*, who, "is at the mercy of the malguzar; while the moment a man "steps into Berar and engages a field, he becomes proprie- "tor of the field in every sense of the term. So long as he "pays the revenue, he can let, mortgage, or sell his land. There "is no private landlord between him and the Government "Unless he default, his possession can never be dis- "turbed, and yet if it pleases him, he can at the close "of any year, relinquish his holding. There can be no com- "parison between a tenant-at-will in these provinces and the "status of a man who engages for a Berar field. This, I "believe, to be the main cause, though it is possible that our "low rates for land in Woon, may and do tempt people to occu- "py it." Whatever be the cause, the effect is indisputable; and until the Chief Commissioner and the district officers recognise the necessity (1) of ascertaining the ebb and flow of population in the Provinces, with as great accuracy as possible; (2) of investigating the causes; and of removing them, any scheme for colonising the waste will merely subsidise men to become immigrants who will in time emigrate to the neighbouring provinces. If the present emigration can be checked, there need be no fear regarding the colonization of the waste. The causes which induce the people to emigrate being removed, a reflex movement will set in, and the present resources of the Provinces will be rapidly developed.

A minor check to population, is no doubt the mortality from preventible diseases, small pox especially. In the six years from 1869 to 1874 this disease carried off upwards of 45,000 persons out of a population under registration never more than 7½ millions. The people are not opposed to vaccination. It is admitted that in the majority of cases, a little management overcomes their scruples and in districts so dissimilar as Saugor and Seonee, Chindwarra and Sumbulpore, in which vaccination has been steadily pushed for several years' the total number of deaths from small pox from 1871 to 1874, inclusive was but 189; 115; 213 and 61 respectively. These figures speak for themselves, and show how largely the mortality might be reduced, were a *general* scheme of vaccine introduced. Little has been done to carry out systematic vaccine throughout the Provinces, and what has been done has been inadequate to existing requirements It would give a better return to expend Rs. 20,000 for five years on vaccination, than a lakh of rupees on the Charwa Jungle Colonization scheme; and the idea is commended to the Administration.

The important conclusion of the whole matter is this, that Sir Richard Temple's settlement is proving a disastrous failure. The errors committed in it were long since pointed out in the *Indian Economist*, and the results are disclosing themselves daily. The settlement has given the land over in perpetuity to the class of mushroom landlords into which Sir Richard Temple converted the malgoozars of the province. The error was stupendous, and it is proving fatal to the province. The cultivators are surrounded by districts in which tenants-at-will are unknown. Why then should the ryot deliberately make himself a serf, when he is invited to become a peasant proprietor. The ephemeral reputation which Sir Richard gained for his settlement operations is already dead, and a very brief space of time will pass over us before the land settlement of the Central Provinces will become a bye word in the country, for the fatuity of its course. It is the real cause of the emigration now going on therefrom; and as to peopling the provinces by immigrants from the North-West, the sooner the delusion is abandoned the better. We shall yet have to undo the settlement made by Sir Richard in violation of all modern principles, and get rid of the Malgoozar in the best way we can.

THE CHUAR REBELLION OF 1799.

A YEAR or two ago, the settlement officer of Midnapore submitted to the local Government an interesting note on what he designated the Chuar Rebellion of 1799. Mr. Price somewhat exaggerates perhaps the disturbances he has described so vividly, when he speaks of them as a rebellion, for Mr. Strachey, the magistrate of the district, in reviewing its condition a year or two afterwards, (1802) speaks of the same disturbances as follows:—"Two years ago a considerable part of this district, almost the "whole of the jungle mehals, was overrun by Chuars, who plundered "and burnt several entire pergunnahs, and committed murders daily. "These Chuars must have amounted on muster to some thousands, "and I do not recollect that half a dozen of them were brought to "justice."* Mr. Price probably never saw the very valuable report of Mr. Strachey, from which this extract is made; but he has rightly described the disturbances as an attempt on the part of the paiks and their sirdars to revenge the resumption of their jaghir lands by the government, if not to compel a restoration of them. We observe, however, that while in Mr. Strachey's report the term *Chuar* seems simply to signify thief, Mr. Price uses it to signify a distinct tribe; spelling the word with a capital initial letter, and speaking of their incursions as an invasion from the neighbouring Mahratta jungle mehals. Thus he says—"It may be that "the incursions of Chuars in this year were owing only to those "periodical outbursts of crime and lawlessness to which all wild "tribes are subject. I think I have the best grounds for believing "that the order for the resumption of the paik jaghir lands in "the zemindaree of the Ranee of Midnapore, promulgated several "years before, and carried out to some extent later, to the extreme "dissatisfaction of both zemindars and paiks, gave a decided "impetus to the movement by enlisting on the side of the Chuars "a large body of discontented and starving paiks, who saw no "other means of gaining a livelihood than by entering upon a "career of rapine and pillage."

The word "Chuyar" so far as we have been able to trace it, seems to come through the Hindi language, in which it is spelt (cho'ar) and means a mountain robber, a mountaineer and out-law. Chouhar is an adjective and means stout, robust, bold, "Choar" and choutiar are in all probability derived from the same root, whatever it may be. There is a Sanscrit root *viz*, "choor" which means to rob, to steal; and the personal noun derived from it, is "chora" or "choura" which means a "thief" a "robber," and it may not be unreasonable to trace the *Hindi* "choar" to this root. That "cho'ar" is a Hindi word and means a mountain robber, &c., we have the authority of Shakespere, the oriental professor at the late Hon'ble East India Company's Military Seminary. But H. H. Wilson, M. A., in his glossary of judicial and revenue terms, seems to give a Bengali origin to the word, spells it as "choar" and states that it means the name of a tribe of mountainers inhabiting the mountains bordering Bengal on the west, in Revegarh and the neighbouring districts. At present, however, the word signifies a *savage* and is used in that sense in the Hindi and the cognate Bengalee. We doubt if the word has never been used to designate any particular or distinct tribe of people, such as the Sonthals, the Coles, the Bheels, &c. &c. "Chuyar" is a generic term, and comprises all those and other savage tribes.

To return:—writing in 1802, Mr. Strachey says: "The means taken to restore tranquility were very simple, and I am confident the only ones which could have succeeded. They were merely investing the jungle zemindars with regular authority to preserve the peace in their respective estates; and it is certain that the Chuars are for the most part at present in the service of zemindars, and execute their trust of guards with fidelity and effect." The truth is we had unwisely attempted to introduce a new system of police throughout the country, and had resumed in 1793 the *paikan* lands which had been set apart from time immemorial probably, for the maintenance of the indigenous police of the district. The Council at Calcutta, when these disturbances came to a head blamed the Board of Revenue for "the very injudicious system of conduct pursued by the Board in the management of the paikan lands;" while the Board, with more justice, laid the blame on the stringent and precise orders of the Council, as Mr. Price shows. The Board further explained that the assessment of the resumed paikan lands was very moderate; that the paiks were actually left in possession; and it was only their connection with the police that was done away with. "The zemindars received 10 per cent. on "the amount of the new assessment. Though the disturbances "originated with paiks, still there could be no doubt that they had "associated with them a number of professed hill-robbers, who were "formerly kept in check by these very paiks, who were minutely "acquainted with their haunts and their habits. It was recommended that the paiks should be reinstated at the original quit-rent "paid by them for their lands, and that in the jungle mehals the "police should be made over to the zemindars, who should be made "responsible for the peace of the country." This seems to have been done, when the disturbances ceased. Midnapore remained the theatre, however, of terrible suffering from dacoities, the disclosure concerning which in the reports of the time are almost incredible.

The assessment upon the land under the decennial settlement was the root of the evil and was no doubt oppressive. Mr. Price speaks of it as follows:—"A consideration of the foregoing notes serves to correct a very mistaken notion regarding the nature of the decennial settlement—at least so far as Midnapore is concerned—which I confess I had hitherto entertained, and which perhaps others also have laboured under. It was my impression that the assessment of that settlement bore so lightly on the land, that not only was there committed a wanton sacrifice of the interests of Government, but the landholders and others acquiesced with the greatest alacrity in the very indulgent terms held out to them. Whatever may have resulted in the present day as the relation of that assessment to the existing capabilities of the land, whether from the gradual yet steady depreciation of silver, or from extension of cultivation owing to the greater security of life and property under which we now live, there can be no doubt that in 1799 the assessment on the land was by no means light, and it required in some instances the very greatest exertions on the part of the revenue authorities to induce the landholders to accept the terms of decennial settlement, even after they had been considerably modified in their favour. It was only in the jungle mehals that the assessment, compared with the area settled, could be considered insufficient; but the landholders in that part of the country held their tenure under peculiar conditions; cultivation also had made but small advances, and it was intended that the land-tax should be light, in consideration of the liability of the zemindars to perform certain functions from which their brethren in other parts of the country were exempted."

The assessments of 1789 were we believe heavy throughout the province generally, and as early as 1802 we find Mr. Strachey speaking of the zemindars of Midnapore, as "ruined and destroyed."—"The men of opulence now are the Hindoo maha-"juns and banians of Calcutta, and they are all men of yes-"terday. The greatest men formerly were the Mussulman "rulers, whose places we have taken, and the Hindoo zemindars. "These two classes are now ruined and destroyed. The natives "mostly looked up to are our amlah and our domestics. These "are courted and respected: they necessarily must be the channel "through which every suitor and every candidate looks up for "redress and preferment." It would have been strange if in these circumstances Midnapore had not become the scene of the disorder which Mr. Price describes as the Chuar Rebellion.

* *Appendix, 5th Report, 1812,* page 94, Higginbotham's reprint.

THE TWO NEWMANS.

IF anything should make men tolerant of the differences of merely intellectual views of religious truth, it is the history that has been respectively given to our times by the two remarkable men who bear the name of Newman, and of the mental processes by which the one has become a father of the oratory of St. Philip Neri, and the other the sceptical professor of the London University. Each brother has given us an autobiography of his religious life: and he must be a bold man who doubts the sincerity of either. The extraordinary fact remains—that two boys who were born in the same family, and sat in the same village school, who were both marked by the same intellectual force, and were graduates of the same ancient university, who grew up under precisely the same influences, and stranger than all else, were both subjects, at a very early age, of the great change of character, that Protestants and Romanists alike term "conversion,"—should have at last landed where they have:—the one a loved and honored father of the Roman Catholic Church, a devout believer in the Immaculate Conception, the Syllabus, the Infallibility of the Pope, and every other doctrine of the Church; the other, an open and avowed disbeliever in Christianity altogether. The mental history of these two now venerable men is the most interesting psychological study of the age. How difficult it is to conceive of the elder Newman hanging as a boy "upon the lips of Daniel Wilson" in St. John's Chapel at Islington, as he told the story of Scott's life and death. Or of the other brother

Francis, accompanying the saintly Groves as a missionary to Baghdad nearly half a century back. And yet we know that it was even so. The one has traced for us, in the *History of my Religious Opinions* and the other in *Phases of my Faith*, the stages of their mental progress to where they now respectively stand. The *History of my Religious Opinions* is to our own mind the most interesting book the age has produced: while the other, Francis Newman's *Phases of my Faith*, is the most painful. We have read the one again and again, and never tire of the story: the other we have read but once. We tried to read it a second time, and got half way through it but were obliged to stop: the strange tone of almost personal hostility to the Saviour that the writer breathes, making it too painful for us to proceed. We believe both brothers to have travelled wrong; but while we have the deepest sympathy with the one, we cannot even understand how the feeling that Francis Newman breathes could ever have arisen in his mind. Let us return to John Henry Newman.

"When I was fifteen (in the autumn of 1816,) a great change of thought took place in me. I fell under the influences of a definite Creed, and received into my intellect impressions of dogma, which, through God's mercy, have never been effaced or obscured. Above and beyond the conversations and sermons of the excellent man, long dead, the Rev. Walter Mayers, of Pembroke College, Oxford, who was the human means of this beginning of Divine faith in me was the effect of the books which he put into my hands, all of the school of Calvin. One of the first books I read was a work of Romaine's. I neither recollect the title nor the contents, except one doctrine, which of course I do not include among those which I believe to have come from a Divine source, viz. the doctrine of final perseverance. I received it at once, and believed that the inward conversion of which I was conscious (and of which I still am more certain than that I have hands and feet), would last into the next life, and that I was elected to eternal glory. I have no consciousness that this belief had any tendency whatever to lead me to be careless about pleasing God. I retained it till the age of twenty-one, when it gradually faded away; but I believe that it had some influence on my opinions, in the direction of those childish imaginations which I have already mentioned, viz., in isolating me from the objects which surrounded me, in confirming me in my mistrust of the reality of material phenomena, and making me rest in the thought of two and two only absolute and luminously self-evident beings, myself and my Creator;—for while I considered myself predestined to salvation, my mind did not dwell upon others, as fancying them simply passed over, not predestined to eternal death. I only thought of the mercy to myself.

"The detestable doctrine last mentioned is simply denied and abjured, unless my memory strangely deceives me, by the writer who made a deeper impression on my mind than any other, and to whom (humanly speaking) I almost owe my soul,—Thomas Scott of Aston Sandford. I so admired and delighted in his writings, that, when I was an under-graduate, I thought of making a visit to his parsonage, in order to see a man whom I so deeply revered. I hardly think I could have given up the idea of this expedition, even after I had taken my degree; for the news of his death in 1821 came upon me as a disappointment as well as a sorrow. I hung upon the lips of Daniel Wilson, afterwards Bishop of Calcutta, as in two sermons at St. John's Chapel, he gave the history of Scott's life and death. I had been possessed of his "Force of Truth" and Essays from a boy; his Commentary I bought when I was an under-graduate. What, I suppose, will strike any reader of Scott's history and writings, is his bold unworldliness and vigorous independence of mind. He followed truth wherever it led him, beginning with Unitarianism, and ending in a zealous faith in the Holy Trinity. It was he who first planted deep in my mind that fundamental truth of religion."

Readers of Bishop Wilson's journal can hardly fail to have been struck, we think, with the constantly recurring references to Scott's Commentaries therein. If we remember rightly, it is recorded in the journal that the Bishop read the Commentary daily in his private devotions: and we have here the curious picture of the boy Newman, and of the aged Wilson, poring over the same book with the same pietistic delight. The one comes at last in mature manhood, to lay it aside: the other holds it fast in his dying hand in extreme old age. Which was right:—the one who had let it go, although "he almost owed his soul to it," or the other who held it still in his dying grasp? Had the one grown, and the other stood still? Did Newman forsake the living waters for broken cisterns that could hold none? It is a curious fact that Thomas Scott himself gave the world a history of his religious opinions in the *Force of Truth*, to which Newman refers in the extract we have quoted above. It is impossible, we think, for even the most cursory reader of these most interesting biographical notes not to be struck with the radical difference of method pursued by each. Scott buried himself in the Bible: Newman, on the other hand, in the Fathers. The result might, we think, have been predicted with certainty. Scott took up the Bible, and never laid it down; and the result was that wonderful Commentary, written in the midst of suffering and anguish almost beyond conception, that seems to breathe the very inspiration which it enforces with such simplicity and power over the conscience. It is a striking feature, on the other hand, of the formation of Newman's mind, that he seems to have laid down the Bible at Oxford, and never to have taken it up again. Fascinated by antiquity he buried himself in the Fathers and the controversies of the early Church, and this was the secret of all that followed. Tradition and the Church took the place that the Scriptures had formerly filled in his studies. The first impulse in this direction seems to have been given while he was still an under-graduate, and its history is thus narrated by himself:

"It was Dr. Hawkins who taught me to anticipate that, before many years were over, there would be an attack made upon the books and the canon of Scripture. I was brought to the same belief by the conversation of Mr. Blanco White, who also led me to have freer views on the subject of inspiration than were usual in the Church of England at the time. There is one other principle, which I gained from Dr. Hawkins, more directly bearing upon Catholicism, than any that I have mentioned; and that is the doctrine of Tradition. When I was an under-graduate, I heard him preach in the University pulpit his celebrated sermon on the subject, and recollect how long it appeared to me, though he was at that time a very striking preacher; but, when I read it and studied it as his gift, it made a most serious impression upon me. He does not go one step I think, beyond the high Anglican doctrine, nay he does not reach it; but he does his work thoroughly, and his view was in him original, and his subject was a novel one at the time. He lays down a proposition, self-evident as soon as stated, to those who have at all examined the structure of Scripture, viz., that the sacred text was never intended to teach doctrine, but only to prove it; and that if we would learn doctrine, we must have recourse to the formularies of the Church; for instance to the Catechism, and to the Creeds. He considers that, after learning from them the doctrines of Christianity, the inquirer must verify them by Scripture. This view, most true in its outline, most fruitful in its conquences, opened upon me a large field of thought. Dr. Whately held it too. One of its effects was to strike at the root of the principle on which the Bible Society was set up."

It is not too much to affirm that the direction thus given to Newman's mind was the key to all that followed in the English Church and in the conversions therefrom to Rome. The whole strength of the Church party rests upon the authority of antiquity—in other words Tradition. Rome openly stands upon it, and subordinates the Scriptures to its testimony, insisting that we must interpret them in the sense of antiquity. The High Church party is not so consistent. It is unwilling to acknowledge that the choice lies between Scripture and Tradition, and attempts to harmonize the two. But they are discordant, and will not harmonize. Newman saw this plainly, and cast in his lot with the Church. It is a striking fact in his writings that have come under our own observation that he seldom by any chance refers to Scripture. In the history of his religious opinions, you never find him withheld, or hindered, or perplexed, by what the Scriptures say on the question he is dealing with. It is antiquity and the Councils, and the Popes throughout. Could he have been seduced away from Oxford, and the atmosphere which he there breathed, to a parochial charge and the simple study of the Bible, the illusions with which antiquity had filled his mind would have faded from it, and he would to-day have been still a minister of the Anglican Church. The influences under which he fell were fostered by the peculiar circumstances of his position, until at last nothing but a miracle could have rescued him from the conclusions to which they pointed. He has himself unconsciously shown the whole process of his perversion, and it is too interesting to be curtailed.

"The long vacation of 1839 began early. There had been a great many visitors to Oxford from Easter to Commemoration; and Dr. Pusey's party had attracted attention more, I think, than in any former year. I had put away from me the controversy with Rome for more than two years. In my Parochial Sermons the subject had at no time been introduced: there had been nothing for two years, either in my Tracts or in the British Critic, of a polemical character. I was returning, for the vacation, to the course of read-

ing which I had many years before chosen as especially my own. I have no reason to suppose that the thought of Rome came across my mind at all. About the middle of June, I began to study and master the history of the Monophysites. I was absorbed in the doctrinal question. This was from about June 13th to August 30th. It was during this course of reading that for the first time a doubt came upon me of the tenableness of Anglicanism. I recollect on the 30th of July mentioning to a friend, whom I had accidentally met, how remarkable the history was; but by the end of August I was seriously alarmed. I have described in a former work how the history affected me.

"My stronghold was Antiquity; now here, in the middle of the fifth century, I found, as it seemed to me, Christendom of the sixteenth and the nineteenth centuries reflected. I saw my face in that mirror, and I was a Monophysite. The Church of the *Via Media* was in the position of the Oriental communion, Rome was where she now is; and the Protestants were the Eutychians. Of all passages of history, since history has been, who would have thought of going to the sayings and doings of old Eutyches, that *delirus senex*, as (I think) Petavius calls him, and to the enormities of the unprincipled Dioscorus, in order to be converted to Rome!

"Now let it be simply understood, that I am not writing controversially, but with the one object of relating things as they happened to me in the course of my conversion. With this view I will quote a passage from the account, which I gave in 1850, of my reasonings and feelings in 1839: "It was difficult to make out how the Eutychians or Monophysites were heretics, unless Protestants and Anglicans were heretics also: difficult to find arguments against the Tridentine Fathers, which did not tell against the Fathers of Chalcedon; difficult to condemn the Popes of the sixteenth century, without condemning the Popes of the fifth. The drama of religion, and the combat of truth and error, were ever one and the same. The principles and proceedings of the Church now, were those of the Church then; the principles and proceedings of heretics then were those of Protestants now. I found it so,—almost fearfully; there was an awful similitude, more awful, because so silent and unimpassioned, between the dead records of the past and the feverish chronicle of the present. The shadow of the fifth century was on the sixteenth. It was like a spirit rising from the troubled waters of the old world, with the shape and lineaments of the new. The Church then, as now, might be called peremptory and stern, resolute, overbearing, and relentless; and heretics were shifting, changeable, reserved, and deceitful, ever courting civil power, and never agreeing together, except by its aid; and the civil power was ever aiming at comprehensions, trying to put the invisible out of view, and substituting expediency for faith. What was the use of continuing the controversy, or defending my position, if, after all, I was forging arguments for Arius or Eutyches, and turning the devil's advocate against the much-enduring Athanasius and the majestic Leo? Be my soul with the Saints! and shall I lift up my hand against them? Sooner may my right hand forget her cunning, and wither outright, as his who once stretched it out against a prophet of God! anathema to a whole tribe of Cranmers, Ridleys, Latimers, and Jewels! perish the names of Bramhall, Ussher, Taylor, Stillingfleet, and Barrow from the face of the earth, ere I should do ought but fall at their feet in love and in worship, whose image was continually before my eyes, and whose musical words were ever in my ears and on my tongue!"

THE DEVIL'S REGIMENTS OF THE LINE.

SIR JOHN STRACHEY in his review of the last N.-W. Provinces jail report, has expressed the extreme disfavour with which he regards our present mode of enforcing prison discipline. "As "the placing of a criminal within the class called habitual, implies "that his release from jail will be followed by a return," Sir John Strachey very properly "cannot admit the propriety of "hastening the day of release by a single hour. To bribe a man "of that kind into temporary good conduct, when the experience "that has led us to put him into class II ("Habitual criminal") "tells us that the sooner he is released the sooner he will return to "jail, is to say the least inexpedient." This is we trust a sign of a much needed reaction in our way of treating prisoners in this country. The casual visitor who should be shown over one of our central prisons could not fail to be struck by the singular order and contentment that reigns within the walls, so different from the dark, sullen, looks of the prisoners in an English jail, and the refractoriness that the British jail bird seldom fail to display. The belief in *kismut* has probably much to do with the resignation shown by the inmates of our jails, but it cannot be doubted that mere confinement within prison-walls, with easy work and every necessary of life supplied, and freedom from the perpetual anxiety which the same classes outside generally experience, make imprisonment in India out of all proportion a lighter punishment than it is in the jails of England. The village serf—for in their relation to the landholders the inferior classes of the population are but serfs with this difference, that their masters do not feel themselves under the smallest obligation to contribute to their support when they have become incapacitated from work by sickness or old age—the village serf, sentenced to imprisonment, merely exchanges a modified form of slavery from which the right of being supported is excepted, for a servitude to the State, the dishonor of which to his blunted moral and intellectual faculties is felt in a very infinitessimal degree.

It is somewhat different perhaps with the dwellers in our towns, who have acquired a taste for luxuries and pleasures unknown or inaccessible to the villager. But if these luxuries come to be analysed, they will be found hardly sufficient to induce in the people a just horror of the jail. The "bread and water" diet which exercises such influence upon the imagination of the Englishman is deprived of all dread to the native who has never known any other. The exchange of the cottage with its homely but substantial furniture for the associations of the cell,—an exchange which causes much of the punishment of the English prisoner,—finds no counterpart in the transfer of the native from his empty mud-hut to the palatial dwelling place provided for him by the State; and should he be capable of appreciating the symmetrical, not to say the beautiful, he finds every thing to charm the eye in the artistic arrangements which in some of our chief jails have been perfected by those who have successively held sway over them. We have seen gay parterres, trellised walks, and pathways if not exactly strewn with roses, at least bordered with flower beds, through which the convict is led to his prison house. The external aspect of the jails may be forbidding, and a few long and dark passages may be found perhaps within the walls, but the gloomy gates more usually open upon a scene of brightness into the jail garden, rivalling in beauty the conventional prototype of all horticultural displays since the garden of Eden. As to no Indian jail, could any fancy read over the portals the desperate inscription "abandon hope," and almost the first thing done with the ordinary prisoner is to inspire in him the hope of being able very considerably to shorten his imprisonment by the simple process of being a good boy during his stay. The principle has been borrowed from pedagogic rules of discipline; and resembles the conduct of an incompetent teacher in a village school, who unable otherwise to restrain the high spirited members of his class from breaches of discipline, insidiously suggests that he will release them half an hour earlier than usual, by way of bribe to induce them not to be insubordinate. We are most glad to see Sir John Strachey protesting against it all; and would commend some vigorous words of the great Seer of our times on the subject to the attention of our authorities.

"Several months ago, some friends took me with them to see one of the London Prisons; a Prison of the exemplary or model kind. An immense circuit of buildings; cut-out, girt with a high ring-wall, from the lanes and streets of the quarter, which is a dim and crowded one. Gateway as to a fortified place; then a spacious court, like the square of a city; broad staircases, passages to interior courts; fronts of stately architecture all round. It lodges some thousand or twelve-hundred prisoners, besides the officers of the establishment. Surely one of the most perfect buildings, within the compass of London. We looked at the apartments, sleeping-cells, dining-rooms, working-rooms, general courts or special and private: excellent all, the ne-plus-ultra of human care and ingenuity; in my life I never saw so clean a building; probably no Duke in England lives in a mansion of such perfect and thorough cleanness.

"The bread, the cocoa, soup, meat, all the various sorts of food, in their respective cooking-places, we tasted: found them of excellence superlative. The prisoners sat at work, light work, picking oakum, and the like, in airy apartments with glass-roofs, of agreeable temperature and perfect ventilation; silent, or at least conversing only by secret signs: others were out, taking their hour of promenade in clean flagged courts: methodic composure, cleanliness, peace, substantial wholesome comfort reigned everywhere supreme. The women in other apartments, some notable murderesses among them, all in the like state of methodic composure and substantial wholesome comfort, sat sewing: in long ranges of wash-

houses, drying-houses and whatever pertains to the getting-up of clean linen, were certain others, with all conceivable mechanical furtherances, not too arduously working. The notable murderesses were, though with great precautions of privacy, pointed out to us; and we were requested not to look openly at them, or seem to notice them at all, as it was found to 'cherish their vanity' when visitors looked at them. Schools too were there; intelligent teachers of both sexes, studiously instructing the still ignorant of these thieves.

"And all round this beautiful establishmemt, or oasis of purity intended for the Devil's regiments of the line, lay continents of dingy poor and dirty dwellings, where the unfortunate not *yet* enlisted into that Force were struggling manifoldly—in their work-shops, in their marble-yards and timber-yards and tan-yards, in their close cellars, cobbler-stalls, hungry garrets, and poor dark trade—shops with red-herrings and tobacco-pipes crossed in the window,—to keep the Devil out-of doors, and not enlist with him. And it was by a tax on these, that the barracks for the regiments of the line were kept up. Visiting magistrates, impelled by Exeter Hall by Able-Editors, and the Philantrophic Movement of the Age, had given orders to that effect. Rates on the poor servant of God and of her Majesty, who still serves both in his way, painfully selling red-herrings; rates on him and his red-herrings to boil right soup for the Devil's declared Elect! Never in my travels, in any age or clime, had I fallen-in with such Visiting Magistrate before. Reserved they, I should suppose, for these ultimate or penultimate ages of the world, rich in all prodigies, political, spiritual,—ages surely with such a length of ears as was never paralleled before.

"If I had a commonwealth to reform or to govern, certainly it should not be the Devil's regiments of the line that I would first of all concentrate my attention on. With them, I should be apt to make rather brief work; to them one would apply the besom, try to sweep *them* with some rapidity into the dust-bin, and well out of one's road, I should rather say. Fill your thrashing-floor with docks, ragweeds, mugworths, and ply your flail upon them,—that is not the method to obtain sacks of wheat. Away, you; begone swiftly, ye regiments of the line: in the name of God and of His poor struggling servants, sore put to it to live in these bad days, I mean to rid myself of you with some degree of brevity. To feed you in palaces, to hire captains and schoolmasters and the choicest spiritual and material artificers to expend their industries on you,—No, by the Eternal! I have quite other work for that class of artists; Seven-and-twenty millions of neglected mortals who have not yet quite declared for the Devil. Mark it my diabolic friends, I mean to lay leather on the backs of you, collars round the necks of you; and will teach you, after the example of the gods, that this world is *not* your inheritance, or glad to see you in it. You, ye diabolic canaille, what has a Governor much to do with you? You, I think he will rather swiftly dismiss from his thoughts,—which have the whole celestial and terrestrial for their scope, and not the subterranean of scoundreldom alone. You, I consider, he will sweep pretty rapidly into some Norfolk Island, into some special Convict Colony or remote domestic moorland, into some stone-walled Silent-System, under hard drill-sergeants, just as Rhadamanthus, and inflexible as he, and there leave you to reap what you have sown; he meanwhile turning his endeavours to the thousandfold immeasurable interests of men and gods,—dismissing the one extremely contemptible interest of scoundrels; sweeping that into the cesspool, tumbling that over London bridge in a very brief manner, if needful! Who are you, ye thriftless sweepings of Creation, that we should for ever be pestered with you? Have we no work to do but drilling Devil's regiments of the line?

"If I had school masters, my benevolent friend, do you imagine I would set them on teaching a set of unteachables, who, as you perceive, have already made up their mind that black *is* white,—that the Devil namely is the advantageous master to serve in this world? My esteemed Benefactor of Humanity, it shall be far from me. Minds open to that particular conviction are not the material I like to work upon. When once my schoolmasters have gone over all the other classes of society from top to bottom; and have no other soul to try with teaching, all being thoroughly taught—I will then send them to operate on these regiments of the line: then, and, assure yourself, never till then. The truth is, I am sick of scoundreldom, my esteemed Benefactor; it always was detestable to me; and here where I find it lodged in palaces and waited on by the benevolent of the world, it is more detestable, not to say insufferable to me than ever.

"My sublime benevolent friends, don't you perceive, for one thing, that here is a shockingly unfruitful investment for your capital of Benevolence; precisely the *worst*, indeed, which human ingenuity could select for you? "Laws are unjust, temptations great," &c. &c.: alas, I know it, and mourn for it, and passionately call on all men to help in altering it. But according to every hypothesis as to the law, and the temptations and pressures towards vice, here are the individuals who, of all the society, have yielded to said pressure. These are of the worst substance for enduring pressure! The others yet stand and make resistance to temptation, to the law's injustice; under all the perversities and strangling impediments there are, the rest of the society still keep their feet, and struggle forward, marching under the banner of *Cosmos*, of God. and Human Virtue; these select few, as I explain to you, are they, who have fallen to *Chaos*, and are sworn into certain regiments of the line. A superior proclivity to Chaos is declared in these, by the very fact of their being here! Of all the generation we live in these are the worst stuff. These, I say, are the Elixir of the Infatuated among living mortals: if you want the *worst* investment for your Benevolence, here you accurately have it. O my surprising friends! Nowhere so as here can you be certain that a given quantity of wise teaching bestowed, of benevolent trouble taken, will yield *zero*, or the net *minimum* of return. It is sowing of your wheat upon Irish quagmires; laboriously harrowing it in upon the sand of the sea-shore. O my astonishing benevolent friends!

"Yonder, in those dingy habitations, and shops of red-herring and tobacco-pipes, where men have not yet quite declared for the Devil; there, I say, is land: here is mere sea-beach. Thither go with your benevolence, thither to those dingy caverns of the poor; and there instruct and drill and manage, there where some fruit may come from it. And, above all and inclusive of all, cannot you go to those solemn human Shams, Phantasm Captains, and Supreme Quacks that ride prosperously in every thoroughfare; and with severe benevolence, ask them, What they are doing here? They are the men whom it would behove you to drill a little, and tie to the halberts in a benevolent manner, if you could! "We cannot," say you? Yes, my friends, to a certain extent you can. By many well-known active methods, and by all manner of passive methods, you can. Strive thitherward, I advise you; thither, with whatever social effort there may lie in you! The well-head and 'consecrated' thrice-accursed chief fountain of all those waters of bitterness,—it is they, those Solemn Shams and Supreme Quacks of yours, little as they or you imagine it! Them, with severe benevolence, put a stop to; them send to their Father, far from the sight of the true and just,—if you would ever see a just world here!

"What sort of reformers and workers are you that work only on the rotten material? That never think of meddling with the material while it continues sound! that stress it and strain it with new rates and assessments, till once it has given way and declared itself rotten; whereupon you snatch greedily at it, and say. 'Now let us try to do some good upon it! You mistake in every way my friends: the fact is, you fancy yourselves men of virtue, benevolence, what not; and you are not even men of sincerity and honest sense.'"

GOETHE'S FAUST.

V.

FAUST affords a striking example of the sort of character which in the endless Epic of Humanity furnishes so many tragical episodes. Men of ordinary gifts and limited aspirations pass onwards to the goal of life undistinguished among the multitude; their sorrows and joys, their achievements and failures are too commonplace to attract universal attention. Neither are the truly great always famous in their life-time, and their fame is seldom of the tragic kind. But the truly great, the heaven-sent ones whose powers are of transcendent order and also harmoniously developed, are exceedingly few. The number of Shakspeares and Goethes is small compared with the number of Poes and Byrons, their greatness is recognised by the few, and their fame when they achieve it, is usually unaccompanied by the splendours of terror and tragedy, Like the mighty glaciers that grind to dust the everlasting hills, their course is steady and silent, while the avalanche that is merely a fragment fills the valleys with terrific thunder. So the heroes of tragedy; whose actions and whose fate startle the world, are usually men whose greatness of character is marked by a certain incompleteness. The splendid gifts of our Hamlets and Othellos are allied with fatal weaknesses. The head of the image is of gold but the feet are partly of iron and partly of clay, and its doom is to be broken in pieces. To this order of heroes Faust unfortunately belongs. He is unmeasurably higher than the mass of his fellows, but his greatness is incomplete. His character lacks harmony and therefore it lacks stability, and when the time of trying ordeal comes he falls in awful ruin. Yet there is splendour even in his fall and greatness amid his ruins. Changing the metaphor we may fitly compare him to a celestial orb whose pathway we may fancy to have led it within the range of some alien attractive power, that

loses its own centre of attraction, forsakes its orbit, and becomes a "wandering star for whom is reserved the blackness of darkness," or dashes suddenly "with hideous ruin and combustion, down to bottomless perdition."

We have already tried to point out the greatness and also the weakness in the character of Faust. We must now watch his downfall. The devil, as we have seen, skilfully adapts his temptation to Faust's peculiar weaknesses and the state of mind to which he had brought himself. Faust had voluntarily gone into the wilderness in quest of ambrosial nourishment, and had thus starved his human nature of all fleshly food, and just at the moment when he has begun to despair of ever winning the food of gods and to feel keenly the strong cravings of natural appetites, Mephistoples comes upon the scene, and proffers bread to satisfy his longing. He treats the lofty aspirations of his intended victim with sarcasm and ridicule, as silly whims that bring him no nearer to the gods while they deprive him of the heritage of man. Faust bitterly confesses the truth with which the devil seasons his deadly falsehoods. "I feel it well" he says :—

> "I feel it well, in vain have I uphoarded
> All treasures that the human mind afforded,
> And when I sit me down I feel no more
> A well of life within me than before ;
> Not ev'n one hairbreadth greater is my height,
> Not one inch nearer to the infinite."

Disappointed in his spiritual longings he is ready to embrace the devil's offer of earthly food, but before he can do so he must first win a base victory over his nobler nature, and delude himself or permit himself to be deluded into the belief that he can find satisfaction therein. He cannot easily believe it, for the world's great lesson to him hitherto has been abstinence.

> "Abstain it saith, and still it saith Abstain !
> This is the burden, of the song
> That in our ears eternal sings,
> The changeless tune, our whole life long,
> That each dull moment hoarsely sings."

The man's heart is full of boundless desires and the world is full of boundless promise to satisfy them, and yet the blessedness of satisfaction is never realised. Hitherto, at the bidding of wisdom he has abstained from the grosser delights of sense, and the purer joys of the mind after which he toiled have proved delusive. The cup is dry when scarce yet tasted. And now that Mephistopheles proposes that he should yield up the control of his life to him, and follow him through a course of sensual enjoyment, promising him the satisfaction he has otherwise failed to find, he cannot but feel conscious that the fiend is deceiving him.

But so great is his infatuation that he only prays that the deception may be complete. If the devil can only give him self-complacency and soothe his restless spirit with flattering joy that shall make him forget his miseries he is willing to barter for this his moral freedom and all the high hopes of future attainment he has ever cherished. He foresees that the step he is about to take will end in ruin, but he resolutely shuts his eyes to the far-off result and prepares to dash blindly into the oblivion of intoxication :—

> "The mighty Spirit of all hath scorned me,
> And Nature from her secrets spurned me :
> The thread of thought is rent in twain,
> All science I loath with its wranglings vain.
> In the depths of sensual joy, let us tame
> Our glowing passion's restless flame !

His resolution taken, he forms the necessary compact with the devil, and the ascetic philosopher is completely transformed into the sworn votary of pleasure. Such is the stuff of poets and romancers ! It is an outrage on human nature to suppose that any sane man would thus hug self-deception and sacrifice his soul to quench his passion ! And at the devil's bidding too ! The perfectly sane and sensible reader is doubtless giving vent to some such exclamations as these. So literal and prosaic have we become in these days of matter-of-fact that teaching by parable has, one might say, become obsolete and incomprehensible. We are more concerned to know whether the serpent in Paradise was symbolical or real than to lay to heart the undoubted truth that underlies the history of the fall we convert the figures of spiritual teaching either into facts or figments according as we are credulous or sceptical, and so we have become almost divisible into a people of foolish dogmatists and irreverent unbelievers. Now, as neither class of minds is likely to derive much benefit from the story of Faust, it is perhaps not surprising that those who appreciate the poem of Goethe are, in this generation of book-readers, comparatively few, and it is not improbable that an attempt to awaken interest in it, in our bold prose, may excite contempt for the apparent absurdity of some of the incidents. The story of a great philosopher who for a little sensual intoxication sold himself to the devil is only fitted to amuse children and too improper even for that ! Who believes in the devil at this hour on the horologe of Time ? In all your experience, oh fortunate Reader, you have never met such a devil as this who ruined Faust ! You were never tempted to cast aside faith and virtue for some worldly or fleshly bait ! You never rushed with wilful blindness into a course of self-indulgence ! You do not know that there are men around you, and perfectly sane men too, who are lending all their faculties on the pursuit of some terrestrial object, which may intoxicate the mind for a little while, but which they know will vanish without giving their higher nature permanent satisfaction ? Happy Reader ! You can then with undisturbed mind read Faust for mere amusement as a fiction of tradition and poetry, one of the monstrosities of the human imagination. To us, nevertheless, Faust presents a picture of a terrible reality, and even the more terrible because it is common. Every man who relinquishes the search for spiritual truth, and the effort to mould his life according to the highest truth he has already attained, and who seeks satisfaction in the pleasure of sense and of society, leaving his spiritual nature to chance or fate is such an one as Faust. The devil who led Faust astray was in the likeness of a gay cavalier of the sixteenth century, but we are credibly informed that he is a careful observer of the newest fashions, is by no means averse to swallow-tails and white cravats, looks jolly and handsome in shooting-jacket and knickerbockers, is equally at home in any civil or military costume, is sometimes all in black with an easy felt on his head, and here, in India, may even be met in spotless white under the shadow of a solah tope, can adapt himself to any mood though he chiefly loves the cynical, and can drink a peg and smoke a cheroot, dance, sing, and, in short, do anything you will. And although it is convenient to use the masculine pronoun it may not be amiss to state that h is sex is more than doubtful, and that though Milton's, Goethe's, Burns', and Longfellow's devils were all male any one could have donned female garb and attributes at will. He is a universal genius like the Empress Faustina, of whom Swinburne says :—

> "You could do all things but be good,
> Or chaste of mien;
> And that you would not if you could
> We know Faustine."

Much has been written and may be read elsewhere about the character of Goethe's devil. We need not enlarge on the subject farther than to say that he is perhaps the most successful creation of the kind in literature. Milton's Satan commands our admiration and sometimes almost wins our sympathy. Burns' "Hornie, Nick, or Cloutie," the popular Scotch devil, invested by this poet with a large amount of broad humour, is a sad rascal no doubt, but we cannot help liking him a little and can join in the poet's wish that he would

> "Tak a thocht an' 'men.'"

But Goethe's devil is utterly heartless, a clever cynical scoffer and evil-doer, whose every thought, word and act is irreconcilably at variance with every kindly human emotion. He adopts himself with ease to any society, but it is all simulation and dissimulation from beginning to end. He is so well described by Margaret and the instructive sprinking of her simple innocence at his presence is so exquisitely expressed that we shall anticipate the narrative so far as to quote the passage, using as we have done throughout Blackie's translation :—

> MARGARET.—The man whom thou hast made thy mate,
> Deep in my inmost soul I hate ;
> Nothing in all my life has made me smart
> So much as his disgusting leer.
> His face stabs like a dagger through my heart
>
> FAUST.—Sweet doll ! thou hast no cause to fear.
>
> MARGARET.—It makes my blood to freeze when he comes near,
> I have a kindly feeling for most men,
> But as to see thy face I long,
> So shrink I back from him with instinct pain.
> I hold him for a thorough knave to boot !
> May God forgive me if I do him wrong !
>
> FAUST.—Such owls one cannot always do without.
>
> MARGARET.—With men like him I would have nought to do !
> As often as he shows him here,
> He looks in at the door with such a scornful leer,
> Half angry too ;
> 'Tis plain he feels no sympathy at all
> With anything that breathes, and one can see
> It written on his forehead legibly,
> He never yet hath loved a single soul.
> Within thy arm I feel so free,
> So warm, so yielded up to thee,
> But his approach ties up my inmost soul.
>
> FAUST.—Or thou prophetic angel !
>
> MARGARET.—This overpowers me so,
> That, when his icy foot doth cross the door,
> I feel as if I could not love thee more.
> When he is here, too, I could never pray,
> And this consumes my very heart away :
> Speak, Henry, is it not the same with thee ?

Unfortunately it was not quite the same with Faust.

TRADE WITH KASHGARIA.

The New Company.

THIS Company was formed at the suggestion of Mr. T. Russell, who had for some time turned his attention to Central-Asian trade. It consisted of a few gentlemen, who having taken considerable interest in Central Asian affairs generally, were, after hearing and considering Mr. Russell's proposals, so satisfied as to the probable advantages to be obtained by opening a trade with Turkestan and the countries beyond our frontier, that, in spite of much unfavourable criticism they determined to run the risk, and send a caravan to Kashgaria.

The project was at the time generally considered an extremely venturous one, and many predicted that instead of making any profit by it, the caravan would never reach Yarkund, or at all events would suffer heavy losses on the way. But Mr. Russell reached Yarkund with the loss of a single mule-load of cotton goods. On his arrival the merchants flocked to see his wares, and were lost in astonishment at the quality of the goods which were superior to any they had ever seen. A rapid sale was anticipated, and there is no doubt that the goods would have found purchasers instantly, had not sinister influences been used to prevent it. Under a despotic rule like that of the Amir of Kashgaria there is of course no freedom of trade; and Mr. Russell found that the Amir himself was intimidating the merchants, that he might obtain the caravan for himself at the lowest price. No one of course dared bid agninst *him*, and the result was that the business was at a stand-still. The Amir did not like to openly run counter to the obligations to which he had bound himself by treaty, and accordingly pretended to a wish to further Mr. Russell's interests in every way. But Mr. Russell discovered that besides holding the trade of the country in his hand, the Amir had a monopoly of all the gold in the country. In consequence of this there is no currency, and all dealings are by barter, and a system of credit. It was found impossible to alter this, and Mr. Russell had to adapt himself to circumstances. After vexatious and tedious delays, finding that he remained firm in his resolution not to sacrifice the shareholders to the chances of indemnifying himself and them by future ventures, the authorities relaxed the reins, and permitted merchants to deal. The result was that Mr. Russell disposed of the greater part of the caravan, and could have got rid of more, but that he was uncertain as to the class of goods to receive in barter, to command a profitable sale in India.

He therefore left the remainder of the caravan in charge of Mr. Dalgeish, and returned by rapid marches to India, to arrange for the disposal of the produce brought back by the returning caravan, to find out the state of the markets, and to make plans for the future. The result of his enquiries shows that, irrespective of the prices obtained on the spot, the profits to be made on pushm, churras, silk, and other products is so great, as to render the trade eminently attractive. A temporary depression in the silk market led to more delay than would otherwise have been met with, as it was found unadvisable to take too large a proportion of that commodity in return for the remaining goods. But for this the whole of the caravan could at once have been disposed of. As it is, the latest advices from Yarkund state that pushm and churrus were being gradually accumulated.

A great part of the caravan is now on its return journey, and it is anticipated that the return goods will reach India before the end of the year. The Company was to have waited until they could publish their balance sheet, to show what the profits to be made really are. It has, however, it seems been thought advisable to strike while the iron is hot, and having shown the people of Central Asia what goods can be supplied by Englishmen, to feed as quickly as possible the demand now created. The British Commissioner at Leh, in his trade report to the Punjab Government, had freely expressed his opinion as to what articles are and are not saleable in Eastern Turkestan. Some of his views have been rather rudely upset, as goods which he declared would be unsaleable were among the first to find purchasers. The present Company have, in short, gained much experience which seems to be very valuable; and while confirming the belief that large profits are to be made in Central Asia, they have learned the necessity of somewhat altering their plan of action. In the first place, it is considered advitable to make the Yarkundees meet us half way, by sending our goods as far as Leh only, thus obliging the merchants from Yarkund to take their share of the risk, and compelling them to bring gold or produce, and to establish a system of immediate payments; a wholesome rule which has not hitherto been the custom in Turkestan. In the second place the Company propose to trade also with Afghanistan, with the requirements of whose people they are intimately acquainted. In the third place, valuable concessions have been obtained from the Maharajah of Cashmere, who will not only facilitate the trade at Leh, but has engaged to give the Company a considerable interest in the trade of his adjacent dominions in the Happy Valley. It is therefore now proposed to form warehouses in Leh, Peshawur, and Srinugger, which the traders from countries beyond the frontier can obtain what they require at rates considerably lower than they have been paying for far inferior articles. It is also proposed to establish a wholesale business for the supply of the merchants (both English and Native) in the Punjab, who will thus be able to obtain supplies with less trouble and cost than they now do through the medium of two or three agents.

The scheme is beyond the scope of the present Company, whose Capital only represents a sum of about Rs. 200 000. It is therefore proposed to increase the capital to Rs. 12,00,000 in shares of Rs. 100 each so as to allow any one to invest a small sum who might be unwilling to risk much in the scheme. The present shareholders appear to have full faith in the advantages of what they propose, and any one who wishes more exact information may obtain it, we are told, from Mr. Russell, the working manager of the present Company.

JUMMOO AND CASHMERE.*

THE Maharajah of Cashmere, as Englishmen call him, rules over one of the most beautiful countries in the world. His full title is Maharajah of Jummoo and Cashmere, and the district which has more poetry associated with its name than all Hindostan besides is a comparatively small portion of his territory. Its limits include the two districts named in the title of His Highness, with Ladakh, Baltistan, and Gilgit in addition, and it is situated on the edge of the great plain of India, which sweeps unbroken from the mouths of the Ganges to the western part of the Punjab, continuously skirted on the north by the Himalaya range. "It is the last strip of the plain and the wide mass of the mountains on the north of the Punjab that make up the territory," and through all the sinuosities of this plain, and all the defiles, over all the heights of these mountains, Mr. Drew takes the reader of his most interesting and valuable work; among the strange peoples, and the grand aspects of nature, in that vast area of 68,000 square miles, which encloses a bewildering variety of subjects for study and admiration, and yet holds only a small place in the immensity of India.

It has rarely been our good-fortune to read so lucidly planned a book as Mr. Drew's; to feel that we have so clear a notion of the position and the physiognomy of any totally strange land, before beginning to examine it piecemeal. This is due to the author's sketch of "the vertical geography" of the whole area; of the strip of plain on the south-west, continuous with the great level plain of the Punjab, 1,000 feet above the level of the sea; of the strongly defined mountain-line, with a rugged tract behind the first ridge, with parallel loftier ridges and long narrow valleys; the whole forming what Mr. Drew calls "the region of the Outer Hills." To this succeeds a tract which he calls "the Middle Mountains," occupied by hills from 8,000 to 10,000 feet high, covered with forest or with pasture, and exquisitely beautiful. These are not set in parallel lines, but they ramify, as do the lovely valleys. Then comes a statement, out of which one makes a marvellous picture as one reads:—

"We now come to more lofty mountain ranges, which rise first to rocky heights, and then to the region of perpetual snow. A great chain of snowy mountains, running south-east and north-west, has summits varying from 27,000 to 15,000 feet; in one part of it peaks of 20,000 are not uncommon. Branches from this enclose the valley or plain of Cashmere with hills, of which many are 14,000 to 15,000 feet high, the valley encircled by them being 5,000 and 6,000. . . . . Beyond that great range is the north-western part of Thibet; Ladakh and Baltistan are divisions of it, and Gilgit may be said to belong to it, Here the mountain ranges are of heights of from 17,000 up to 22,000 feet and more, one peak (yet unnamed, though the second highest known in the world) has an altitude of 28,000 feet. The valleys of this region vary much in character; in the south-eastern part they are flat and high level, but as one goes north-westward their height descends, the space narrows, loftly mountains always bounding them, ultimately to as low as 5,000 feet above the sea. In a few places are table-lands, too wide to be called valleys. There are plateaus; one, the Deosai, is 13,000, and another, the Lingzkithing, 17,000 feet above the sea."

It must be a marvellous pleasure to journey through the Valley of Cashmere, with the sense of immense space, but the continuous, majestic, and awful presence of the ultimate-bounding mountains always with one. There the gentlest and most delicately beautiful of the animal and the flower and plant world are in the way of one's footsteps, and the sublimest phenomena of nature, the things whereon weak man may hardly look and live, are on the right hand and the left, the unnamed mountain—of which the traveller who had seen its supreme grandeur would surely think always as the Mountain of the Shadow of God—and the great depths, from which the hills are like the tremendous waves of the sea seen from the trough between them. In this country the temperature ranges from the more than tropical heat of the Punjab summer to such intensity of cold as keeps perpetual snow on the mountains, whose awful solitudes no puny, presumptuous human life has ever invaded. In the inhabited places the variation is such that "in the lower parts the fashion of the poor of India of going almost unclad is followed; in the higher, sheepskin coats are wanted for protection against the cold, and people are confined to their houses by snow seven months in the year." In this country there is a

* *The Jummoo and Cashmere Territories: a Geographical Account.* By Frederick Drew, F.R.G.S., F. G. S. London: Edward Stanford.

district where periodical rains prevail ; a district where they do not reach, but there is rainfall enough for all crops but rice without irrigation ; a district where no crops can be raised without irrigation, but forests grow upon the mountain slopes ; and a nearly rainless tract, where the whole face of the earth is treeless and pastureless, and where no crops can be raised without irrigation, so that the inhabitants of it divide among them the easiest and almost the hardest conditions of human life. We must go to the Lapps or the Esquimaux to find a sterner face turned to her children than that which mother-earth puts on for the people of Ladak, Baltistan, and Gilgit ; and if we want to paint her portrait as the Valley of Cashmere possesses it, we must ask the Eastern poets for the colours of flower and gem, for the smile of the golden sunbeams and the message that came in them.

When the physical features of the country, with all their immense variety of form and character, have been studied, it will be found that the populations are little less various. We, who live in a small country where we never lose the sense of people, cannot but fancy that population must seem trivially accidental in such a land as that. Mr. Drew divides the tribes which dot the lower hills and shelter in the valleys, so far as separation and description, of them are possible, into five races of the Aryan family, and three (under the general head of "Tibetan") of the Turanian. Of each of these races he gives a minute description, in their actual condition, and their history from the earliest ascertained period. The completeness of his work is in this respect greater than the reader is led to anticipate from the title-page and the introduction, and from the author's early disclaimer of ethnological science. The work is, in fact, a narrative of travel over the whole of the territory under the rule of the Maharajah of Jummoo and Cashmere, in the course of which Mr. Drew, who was in the service of His Highness as a "geological investigator," penetrated, in his search for minerals, into corners many of which have not only never been visited by Europeans, but never been seen by any native of any of those countries. It follows the plan of the vertical survey with which it opens, and includes a very interesting history of the dynasty which ruled Jummoo for—the natives say—5,000 years, of the famous *parvenu* Rajah Golab Singh, under whose single rule countries separated by so many mountain chains, and races so widely different, came to be united ; and of the series of events which have led to the result which the author puts in the following words :—

"Politically, this tract is a Government tributary of the Queen, with relations defined by certain treaties, whose effect is that the ruler is obliged to govern his foreign politics according to the Government of India, while in domestic administration he is nearly independent."

With the writer, we enter, from the British territory of the Punjab, the region of the Outer Hills—crossing the ravine-river plain in front of them, where jungle-grass flourishes, and the antelopes so abound that they spread into the cultivated parts, and herd with the cattle—and come, noting every physical feature of the country, its climate, its vegetation, and its people, the Dogras and Chibbalis, to the city of Jummoo, the capital of the Maharajah's country—which has at last been left almost at the edge of the territory, the additions to the original principality of Jummoo having been made in every direction but that of the Punjab. Jummoo is a curious city, at whose gates travelling on wheels comes to an end, whence onward carriage is performed by camels, pack-horses, elephants, and coolies ; bounded on two sides by a steep cliff overhanging the river-bed, with the palace and building perched at the edge of the most precipitous part ; and streets which are a maze of low, single-storied houses—one overtops them when one rides by on an elephant—narrow shops, many temples—one of them golden-domed, built in memory of Golab Singh—whose tall spires and gilt pinnacles catch the eye from far away on the plain. The forest, full of pig, spotted deer and neelgay comes up to the skirts of the town. A chapter is devoted to the daily life of the Maharajah's Court and the public durbar, where the Maharajah sits on a cushion under an arch of the arcade of one of the buildings in the Mundee, a great irregular square, where all public business is done in the open air, looking down on the crowd of petitioners a few feet below him, and administers justice in person. Here is the picture of the square, which is the centre of the life of the town during the hours of the durbar, when it is thronged by numbers of people of such a variety of races as is not often seen even in India :—

"Here are men from all parts of the dominion ; some from the higher countries, come to find work at Jummoo when their own homes are deep-covered with snow ; others are here to prosecute a suit, for which purpose they are ready, and sometimes find it necessary, to give up months of their winter. There are Cashmerees and Baltis by scores, Paharis (the men of the Middle Mountains) of various castes, Ladakis occasionally ; some recognisable at once by the cast of their features, others by a characteristic way of keeping the hair ; the stalwart, heavy frame of the practised Cashmeree porter, too, is unmistakeable. Then from beyond the territories come occasional travellers, as Yarkandi merchants, or pilgrims to Mecca, from farther off still ; while from the west there is a succession of Caboolees and other Pathans or Afghans. Horse merchants from Cabul are always finding their way to Jummoo to sell their animals to the Government, while wild fellows out of the villages of that country or of the neighbouring Yuzufzar come eagerly to take service among the irregulars of the Maharajah's army."

Until noon the place swarms like an ant-hill ; then the offices close the guard is dismissed, every one goes to dinner and siesta, and the square is deserted for three hours, at the end of which out comes the Maharajah for a ride ; his elephants and horses have been waiting at the palace-gate. If he mounts an elephant one of the Ministers will be by his side ; if he rides a horse they will all follow him closely, and some of his orderlies will run on to clear the way, others will run by his side holding on to his saddle trappings. So the three or four miles' ride will be accomplished, a new building or a temple visited, a hawk flown, or perhaps the Maharajah will pay his respects to his spiritual adviser—whose house is the only one he ever enters—and the time is filled until the evening durbar, at which conversation alternates with work, the ruler sees people from all parts, and hears what is going on in the world. Things are done in grand style on special durbar days, when the *nuzzurs*, or presents, are offered (these amount to what is equivalent to a 3 per cent. income-tax levied on Government servants), and there is a march-past by the three thousand troops. Then the Maharajah and his court come in procession from the palace to a raised platform at the edge of the parade-ground, where the durbar is held under an awning ; their elephants are covered with long velvet cloths, embroidered deep with gold, on which the tray-shaped howdahs, with upright sides, and room for three people to sit cross-legged in each, are mounted ; the horses are caparisoned with velvet and gold saddle-cloths and jewelled head-stalls, and the Maharajah is arrayed in yellow and silver. The author gives a fascinating account of the great festivals, especially of the *Dusserah* when the victory of Rama is celebrated, and the variegated colours of the dresses—for it is held at the beginning of the cold weather, and plain white calico and muslin have been discarded—add to the brilliancy of the scene.

A sojourn in this thoroughly Hindoo capital which gives us the idea of extraordinary seclusion even in the vast remoteness of India, must make a European understand the life of the East, in a way not to be got at on the mixed and modified external side of the Outer Mountains. Within a couple of marches are the ruins of three Hindoo temples, of undefinable antiquity, which, though clearly devoted to the worship of this actual time, for Ganesha, the elephant-god, is prominent among the figures, are quite neglected by the people. We linger willingly with the writer over the scenes which have such charms for the fancy,—the pilgrimages, the royal hunts, the curious festivals in which the deepest philosophy finds the most childish expression ; but he gives the word for the Middle Mountains, and takes us to their lower slopes, to the forests of Himalayan oak, with rhododendron and horse-chestnut among it and, higher up, of deodar, of silver fir and pine, to the sloping glades of fresh grass dotted with trees, like an English shrubbery ; to hill-surrounded plateaus, shaded by superb walnut-trees, with a foaming river and beautiful cascades far below, until, leaving the summer, we rise to altitudes where it is winter, and come to a camp pitched on the north side of a valley at an altitude of 9,500 feet, and are bidden to look across at a snow-clad slope of 4,000 feet, surmounted by a rock-mountain 13,500 feet high. Surely, to those who see this with their bodily eyes it must seem to be the end of the world, the ultimate shutting-out of all things. Every stage of the march from Jummoo to Cashmere is full of interest, furnished by the places and the people ; the story of Kishtwar is a chronicle of stubborn fight, and the description of the plain, enclosed by high mountains, enamelled with gorgeous flowers on close green grass, set with beautiful villages shaded by huge plane-trees, and divided by hedge-rows of red, yellow, and white roses, and commanding a view of a wonderful waterfall, whose spray-shrouded volume leaps from a cliff 3,000 feet high, is quite entrancing. Indeed, the entire journey through the Middle Mountain region is so, and not without its thrilling suggestions of danger ; the rope-bridges with roaring torrents beneath them, which sway in the always high wind, are rather fearful to think of. The people of Padar, their history, the deodar forests, the great temple of Ragaori ; the Ratan Peer, or Pass (an appellation which the author ingeniously accounts for in a note to page 157), the gradual descent of thousands of feet to Heerpoor, partly through woodland paths where violets, strawberries, forget-me-nots, and buttercups abound, occupy us delightfully, until the

writer tells us how, between what, as compared with the mountains, are mere banks, he enjoyed his first view of the long-looked-for country of Cashmere.

LETTERS TO THE EDITOR.

"SIGNS OF THE TIMES."

To the Editor of the Friend of India.

SIR,—An article with this heading appeared some little time ago in one of your contemporaries, that I abstained from noticing partly from the hope that it might be repudiated by the journal itself, and partly from a doubt as to whether it was worth while to seriously answer it. If a man openly assert his desire of insulting and oppressing his fellow-men, the only argument likely to deter him from gratifying this desire is the assurance that if he attempts to do so he will be fined and imprisoned. I notice the article now only to repudiate, as I think every European in India should do, all participation in the insult offered therein to our native fellow-subjects.

The writer begins with expanding the old idea that we are sitting on a volcano. He hints—rather than states that the attitude of the Native Press, and the insolence of the lower orders of natives to "poor Whites" shew that we may expect an eruption, and that we shall have brought it all on ourselves, because we have been fools enough to place all classes on an equality before the law, and to allow all an equal liberty in the expression of their opinions. How we are to avert the danger we are not told, but the writer seems to think that if we were to deprive natives of all redress against Europeans except for outrages which might come under the head of cruelty to animals, and to enact that while European writers may be allowed to libel the people *en masse*, a Native paper attributing any but the most exalted motives to the acts of Government or individual Europeans should be instantly suppressed, there might still be a chance for us. But the writer shews by his silence, that it is obvious even to him that the sentimentality of Exeter Hall would prevent the proper carrying out of such a policy, and that all we can do is to sit down and await the end, with the courage of despair.

His reference to the Meares case was an unfortunate one; although it is true that in many points it bears some analogy to the Baroda case. In both cases there was no doubt that the complainant had suffered the injury complained of. The fact that Panchu had been really flogged was even more indisputable than the fact that an attempt had been made to poison Colonel Phayre. In both cases, it was certain that the actual perpetrators of the offence had been instigated by some one in a higher position than themselves—In both cases, there was a *primâ facie* presumption that this person was the accused: and in both cases there was the direct testimony of native witnesses that the presumption was correct. In both cases, cross-examination brought out inconsistencies in the evidence; and in both there was the same issue before the Court—Were the inconsistencies sufficient to discredit the general truth of the witnesses' story? In both cases the Court answered "no;" but in both there was a difference of opinion. In the Meares case, the English magistrate who actually examined the witnesses, and two out of the three judges who heard the appeal, held that the guilt of the accused was proved. In the Baroda case, the Commissioners who examined the witnesses were divided. The Supreme Government, rightly as I think, found the accused guilty, but the Home Government thought the case sufficiently doubtful to render it advisable to depose the Gaekwar on other grounds.

In the Meares case, the Native Press may have exulted too much; but the tone of some of the English papers was, I think, most indefensible. If they did not charge the judges with corruption, they insinuated that they were incompetent to decide the facts of a common assault case; or were so weak that they gave a decision they knew to be wrong to curry favor with native opinion. No Englishman's liberty, or even life, was declared to be safe. "Indignation meetings" were called, memorials presented, and the Lieutenant-Governor bitterly denounced for rejecting them as the English Government, and Parliament have been denounced in favor of the "unfortunate nobleman" now at Dartmoor.

Exciting race-prejudices seems to me to be one of the great offences of our papers. There is scarcely a journal I take up that does not contain something to wound the feelings of native gentlemen. We have articles proving that all vices are inherent in the native character, or we are urged to the duty of ruling by the sword. Extracts are culled from Native papers to shew how seditious they all are: offences proved against individuals are held up as specimens of what we may expect if we persist in the ridiculous policy of putting natives into posts of trust. It is therefore not without reason that those who declaim against the liberty of the Press in India claim a continuation of the utmost liberty for themselves. Were a Censorship established, one of the censor's first duties would be to prevent one class of the community insulting another.

I would ask seriously those of your contemporaries who offend in this way or allow themselves to publish articles like the one under notice, what object they hope to obtain? They must acknowledge that there is not the remotest chance of legislative sanction to their views. No law will ever be passed to favor Europeans in judicial cases, or to make Natives comply with the demands of loafers in a willing and submissive manner. The only effect of advocating such laws is to raise the hostility of those against whom they are proposed, and to tempt the more ignorant into violations of the existing law.

AN ENGLISHMAN WHO REFLECTS.

YOUNG vs. OLD BENGAL.

SIR,—We are beginning to reap the fruit of the European education which has of late years been so pressed upon the inhabitants of this country, and which in result is proving no exception to the introduction of exotics into any country, not prepared for their reception. It is no blame to the natives of India that European institutions do not find a congenial home in their country, any more than it is to Europeans that foreign ways do not go down kindly with them, and it cannot but prove a failure for natives to try for any system of popular Government until the country is educated up to it. Young Bengal has been going too fast, and a good instance of this is seen in the report of a meeting held last Saturday week for the purpose of establishing an "Indian league, for representing and furthering by all legitimate "means, within the bounds of the constitution and loyalty, the "genuine wants and deliberate wishes and aspirations political, com-"mercial, and adminstrative of all classes of Her Majesty's subjects." Even in Europe such patriotic debating clubs have become a weariness and burden to mankind, and it is sad to see the tendency of Young Bengal to follow that model, and give itself up to talk, instead of sitting down quietly to improve its condition, by steady work and careful study of what is best in western civilization. Even the British Indian Association is behind the times for this new organization; and that not yet very ancient body is described by the new patriots as consisting of "effête and old men." It is greatly to be doubted whether the old style of Bengalee (of position) was inferior to his smart descendant in any quality, and the intercourse between Native and European was without doubt more kindly and cordial when they could understand and appreciate one another, without apeing each other's manners of acting or thinking. Each race had better keep to its own ways, and certainly the inhabitants of India have no reason to complain that they are not fully considered under the British Raj. At an entertainment given by a well known and respected Baboo the other day, in which Europeans and Natives participated, one of the native speakers very aptly described the fusion sought to be brought about, as likely to be "cemented with beef, brandy, tobacco, and beer" and said the two races would then "march forth, hand in hand, the path of civilization, peace, and prosperity." A result greatly to be desired, and which will no doubt come about in time, if gone about in a better way.

B.

FUTURE PUNISHMENT.

SIR,—There are signs abroad, I think, that the 19th century will complete the work of the 16th, in bringing men closer back to the Bible as the rule of faith. The work of the reformers was necessarily incomplete. Their attention was fixed and concentrated upon the most obvious and offensive, of the superstitions which the Church had engrafted upon Christianity. Tetzel's scandalous mission led to their discovering that neither Purgatory nor the Mass had any foot-hold in the Bible; and had they lived on they would have seen that the belief from which both took their origin had no place therein either. The moment the belief came to prevail that the soul was naturally immortal and not mortal as the Bible teaches consistently, it was necessary to find an eternal abode for it. The choice lay between Hell and Purgatory, a meaning being given to the former word altogether foreign to its sense in the Scriptures. It being as incredible to the third century that God had brought the masses of mankind into being only to consign them to eternal fire, as it is to the 19th century, a purifying fire had to be invented; and the Church finally went a step further and invented masses to deliver souls even out of that abode; handing the keys of the new institution to the Pope. The grafting of the Greek *Tartarus* upon Christianity was the real origin of both doctrines. They were simply an escape from the horrible doctrine of everlasting torments and were adopted to make a belief in Hell possible to the human mind. The *Nonconformist*, commenting on some recently published books by Independent ministers which discuss very trenchantly this doctrine says: "The question seems ripe for patient theological treatment, as well as for popular presentation, and we can anticipate nothing but good from a frank and full discussion of it." How strange it is, adds the *Lucknow Witness*, "that so many good people should shrink from it, and should exhibit so little confidence in the truth, as to repress every attempt at untrammelled investigation. Only thus can we hope gradually to eliminate the errors of our creeds."

A layman in the same paper deals with the subject in a very admirable spirit, and says: "I have found, as a rule, that enquirers into the matter "are laymen, men who are in the habit of 'searching the Scriptures "whether these things are so,' which are expounded to them from the "pulpit. It has surprised me to find that few of the ministers of the "Gospel to whom I have spoken on this great question, have ever studied it. "This I found to be more frequently the case at home than in this country. "It has shocked me to find men appointed to be religious teachers who "have at once taken for granted this awful doctrine of the eternity of "suffering and shown such ignorance about it as to be surprised "that there are doubts entertained as to its scriptural foundation on the "part of not a few men of deep piety and sound mind. But I have "met such men, and some of them Missionaries, in this country." "I know of thoughtful, pious, and humble servants of God, men ever "searching the Scriptures for fresh knowledge of God, by the teaching "of the Holy Spirit, who find the doctrine in question so inconsistent

"with what the Bible sets forth in every page as to the character of "God, that they are wholly staggered by it."

It is, I believe, the fact, that large numbers of laymen are in advance of the pulpit in their convictions on this momentous subject. They have arrived at the definite and settled view, that science is right in affirming that there is no reasonable ground whatever for believing, that man is *by nature* immortal; (2), that Revelation most explicitly confirms what science teaches, and that the earliest of the Christian fathers, Just in Martyr, held that the necesssary immortality of the soul was not taught in the Scriptures; (3) that Immortality is the *gift* of Eternal life; and that all hope of it rests upon the Resurrection of the Saviour and upon our union with Him. Hence the importance attached in the new Testament to the Resurrection, as the sole ground of the Christian's hope of a future life. It was this doctrine that gave Christianity so distinctive and so absurd a character in the eyes of the Greeks. That the soul was immortal was a favorite speculation of their own. That the soul was mortal like the body; but that body, and soul would rise from the grave; and that assurance of this had been given unto all men in that Christ had been so raised, excited simply the ridicule of the Athenians who "when they heard of the Resurrection of the dead mocked." The Incarnation and the Resurrection are the two grand peculiarities of the Christian system. By stooping to be incarnate, the Son of God became the Brother of mankind, while by His Resurrection He has robbed the grave of its victory, and given all who are united to Him the assurance of Immorality. There is a Resurrection of the unjust also; but it ends in their *second* death, under few or many stripes from the righteous but merciful hand of the Divine Saviour now become the judge of all men. That there is a final Restitution of all men, and a gift of Eternal life to all is not in the Bible as I read it, but the rest is clear. The Church of the second century got Platonized, and made man immortal. By so doing, it robbed both the Incarnation and Resurrection of the Messiah of their necessity and their true significance, while the doctrine of an Eternity of punishment followed in its wake, to be softened down and made endurable by the inventions of Purgatory and the Mass. Protestants have got rid of the latter errors, but the root doctrine of the *necessary* immorality of the soul still keeps them away from the Christianity of the new Testament. The natural reply of every native of India to the missionary while this lasts must be "I cannot receive the Christian religion, if I must believe what "you say concerning the dealings of God with whole nations and genera- "tions of human creatures whom He has himself left in ignorance." The missionary has preached another gospel than that Paul preached on Mars Hill: contradicted a plain statement of our Divine Lord and his apostles, and promulgated a doctrine which is abhorrent to the conscience and reason of mankind; a doctrine which does not admit of being relegated to the back ground, but forms the fore front and substance wherever it is admitted to be part of the Christian system at all. And if we are preaching a gospel of which Paul knew nothing, or are even preaching the gospel which the apostle *did* preach, but adding thereto a stumbling block so awful as this doctrine presents—Why should we wonder that the people fail to embrace it? It is as certain as that God lives, that Christianity is "glad tidings of great joy to all people" and if we are preaching a Christianity that cannot be so described, without a reserve that hides its real nature from ourselves, it is not the Christianity of the Bible, nor the divine message that is to convert the world. How hideous is the gulf between the creed that passes for Christian, and the simple letter of Scripture upon the destiny of the race—a subject of awe and mystery in all creeds! Glance for a moment, at the refinements upon which Catholic teachers of the orthodox school venture. "In the twilight of hell,' says one of them, 'the damned will behold "the hideousness of the other reprobates, and of the devils who will "assume horrible forms to terrify them the more. The sense of smell "shall be tormented. * * If one body of the damned were driven "from hell, the sense of stench would be enough to destroy all men. "* * The hearing shall be tormented by the continual howling and "wailing of those despairing wretches. The devils will make perpetual "noises." Might we not well be pardoned for believing that we had in our hand the description of some Chinese joss-house, rather than the writing of a doctor of the Christian Church. It is a solemn declaration of Scripture that it shall be ill with the wicked. Christianity would be glad tidings to none, if its message were other than *that*: but the "developements" which darkness and superstition have "drawn out" of the Bible, for the purpose of making creeds and systems, are so horrible that they undoubtedly form one of the chief barriers to the reception of Christianity, by a people like that amongst whom we live. The South Sea islander may receive without difficulty, a Christianity which calls itself orthodox; but it is because the heart of the savage is reached, while his intellect is dormant. But in India, we have a people accustomed to reason and to reflect; and we cannot doubt that the dogmatic developements that have been drawn out of the Bible and called "Christianity" throw a heavy stumbling block in the way of its reception. Instead of "glad tidings" a system of doctrine has been evolved that revolts the conscience, and we then wonder that Christianity makes such slow progress.

A LAYMAN.

POETRY.

THE HAUNTED DURREE.

Once upon a noontide steamy, as I pondered hot and dreamy,
Over many a dark and fusty native near my court house door—
While I nodded, nearly sleeping, suddenly there came a creeping
As of some one gently peeping, peeping through the open door
"'Tis some visitor," "I muttered," "creeping through the open door—
Only this and nothing more."

Ah! distinctly I remember it was in the moist September.
And each dirty shoeless member left its mark upon the floor.
Eagerly I wished the morrow-pay-day, for I'd failed to borrow
From the Bank relief from sorrow—sorrow for the long lost store;
For the rare and precious metal I had hoped to have in store—
Lost to me for ever more.

And the look so contemplative, of each dark and stolid native
Bored me—stared me with fantastic fancies never known before;
So that now, to stave off sleeping—This repeating I was keeping
'Tis some visitor that's creeping silently within the door
Some damp visitor that's creeping from the wet within my door,
This it is and nothing more.

Presently I grew less drowsy; put aside the open *tauzih*
"Sir" said I, "or Madam, truly your forgiveness I implore
But the fact is I was sleeping, and so gently you came creeping
And so shily you came peeping, peeping through my court-house door,
That I scarce was sure I heard you"—Here I opened wide the door;—
Blankness there, and nothing more.

Deep into a corner peering, there I saw a monster leering,
Glaring, staring as no mortal ever dared to stare before;
But the silence was unbroken, and *the* stillness gave no token,
And these words alone were spoken—"Has Sir William brought the ore?"
This I whispered, and an echo mocking murmured back "the ore"
Merely this and nothing more.

Back into cutcherry turning, mixed emotions in me burning,
Soon again I heard a creeping somewhat louder than before.
"Surely" said I, "sure as old-Nick, that is something at the door-chick
Let me go then with this big stick and the mystery explore;
Let me keep awake a moment and this mystery explore—
"'Tis the wind and nothing more."

Here the chick I lifted higher, when with eyes far flashing fire,
In there sprang a stately cobra, and from out my every pore
Came the perspiration quickly. For a minute felt I sickly,
As with crest raised blackly, thickly, there he stood against the door—
Stood or *sat*, and nothing more.

Then this ebony snake beguiling, my sad fancy into smiling,
By the grave and stern decorum of the countenance it wore,
"Though thy hood be wide expanded, thou" I said art p'raps commanded.
Ghastly grim and deadly cobra to report about that 'ore'
Tell me what thy lordly name is on the Jumna's flooded shore
Quoth the Cobra "Never more."

Much I marvelled this ungainly, snake to hear discourse so plainly,
Though its answer little meaning—little relevancy bore;
For we cannot help agreeing that no living human being
Ever yet was blessed with seeing snake at his Cutchery door—
Beast or snake upon the durrie, lying near his court-house door,
With such name as "Never more."

But the cobra sitting lonely on that dirty mat spoke only,
That one word, as if his soul in that one word he did outpour,
Nothing farther then he uttered, not a single hiss he spluttered—
Till I scarcely more than muttered, "Other friends have flown before—
On the morrow *he* will leave me, as my hopes have flown before."
Then the snake said "Never more."

Startled at the stillness broken by reply so aptly spoken,
"Doubtless said I" "it can tell me something of my longed for 'ore'
Sent p'raps by William Muir, for my thoughts fixed on my pay were
Pay that is so microscopic, that I dread to name the topic"—
Quoth the Cobra "Never more."

"Prophet!" said I, "thing of evil! prophet still if bird or devil!
Whether tempter sent, or whether tempest tossed thee here,
Desolate, yet all undaunted, in this dingy room enchanted—
On this durrie vermin haunted—tell me truly I implore—
Is there—*Is* there balm in Gilead?—tell me—tell me, I implore!"
Quoth the Cobra "Never more."

"Prophet!" said I, "thing of evil—prophet still if snake or devil!
By that heaven that bends above us—by the gems we both adore—
Tell to this unhappy mortal, if *unto* his dreary portal
Will at any time be brought all those arrears of filched ore
Payments promised and that bought all, that he knew of classic lore—
Quoth the Cobra "Never more."

"Be that word our sign of parting, snake or fiend!" I shrieked up-starting
Get thee back into the mud-pools on the dirty Jumna's shore!
Leave no shiny mark as token, of that lie thy soul hath spoken!
Leave me ere with rage I'm choken! Quit the mat before my door!"
Quoth the Cobra "Never more."

And the cobra never flitting, still is sitting, still is sitting,
On the dim Cutcherry durrie just beside my court-house door;
And his eyes have all the seeming of a demon that is dreaming,
And petitions o'er him streaming throw their shadows on the floor
And my soul from out those shadows, that lie floating on the floor
Shall be lifted Never more?

THE WEEK.

CALCUTTA has gone to sleep for a fortnight in honor of the Doorga poojah festival; at least that portion of Calcutta society which has been unable to transfer itself from the ditch to the heights of Simla or Nynee Tal, or to go down the Bay, braving a prophecied cyclone in the desire to inhale ozone. The numbers who have gone away this year are very large, and the Howrah railway station for several evenings, has been a very good imitation of Euston Square. Business is entirely suspended, and were it not for the still considerable numbers of dress-coats seen at Lewis's and at the Corinthian, the appearance of the town would lead to the belief that all the owners of those works of civilization had departed from it. Mr. Lewis has opened in great force of numbers, but so far the performance has been rather disappointing, and if Mr. English's company, who have now arrived, but are not to come before the public until after the holidays, should at all come up to the reports that have preceded them, they seem likely to make the running. In Opera however, the Corinthian Company are making themselves a position that will be difficult to dispute. In "Blue Beard" they have worked together much more as a piece, than in anything they have yet tried, and their performance would have appeared creditable, even on a London stage. The Prima Donna, as Boulotte, was almost perfection, and her arch hoydenish manner quite took the audience by force. There is one important point of the "get-up" which does not receive the attention it deserves, at either theatre—the chaussures. Those at Lewis' are simply atrocious, and of the Corinthian they are only partially respectable. Boulotte, as the peasant girl, was very natty, and as an exception appeared to wear shoes that were made for her, but they were white and worn-looking at the toes, and if meant to be so as a proper representation of the character, then the dress should have corresponded.

THE country at large is now getting into a state of fermentation that will no doubt become more and more intense as the period of the Prince of Wales' arrival draws on.—Here in Calcutta, the visible preparations are as yet mostly confined to white washing houses; but elsewhere balls and festivities of all sorts are being projected. There are fears however, that those preparations may prove premature, since the *Times* has stated on authority that the programmes hitherto published, of the Prince's movements are inaccurate, and that nothing is yet settled excepting for Calcutta. Here, there seems to be no idea of working him to death, and if his journey is to be made an enjoyable one for himself, much of the loyal endeavor being made to do him honor in other places, will have to be modified. It is in the Madras presidency that the most thorough-going preparation appears to be making. At Calicut especially everything in the ordinary conduct of affairs seems destined to be overthrown; the poor fisherman who make a living by drying fish on the beach, are said to have been already prohibited from exercising their calling, lest the Royal nostrils should be offended by the consequent smell. A large supply of turkeys, geese, and ducks is already being fattened for supply of the royal table, and that to an extent that the neighbouring inhabitants are scarcely able to live in their houses for the consequent cackling, whilst the prices of horses and grain are being forced up to most exorbitant rates by numerous and eager purchasers. Both here and elsewhere, house rents have risen to a level that will drive ordinary people, not already provided with lodging, into sad straits, and the young well behaved gentlemen who frequent Chowringhee boarding houses, see nothing before them but the Poor-house in Chandernagore.

THE long expressed desire to have "more bishops" for India is now about to be carried out, and the time seems opportune when a revival of religious feeling is taking place here as well as in Europe and America. Two old missionaries, who have laboured long in Southern India, Dr. Caldwell and Dr. Sargént, are to be consecrated in the cold weather by the three existing prelates of India, but the districts forming the new sees are not yet determined upon. The salaries of the new bishops are to be defrayed by private voluntary subcriptions, so no objection to the appointments can reasonably be entertained by any one Christian or heathen; but still it is not unlikely that unreasonable people may be found to object.

THE storm, which has been brewing for some time in Affghanistan, is about to burst, if we may trust the statement of the *Pioneer*, and the Amir of Cabul is about to direct two forces, from Herat and Balkh, upon the Uzbeks of Maimena, the Meer of which is suspected of a treasonable correspondence with Bokhara and with Abdul Rahman, now an exile, dependent on Russian bounty. The Maimena army is said to consist of about 12,000 feudal horse, and the Governor of Balkh and Hosein Ali Khan, Commander-in-Chief of the Amir's force at Herat, have their work cut out.

THE *Times* speaks, not without reason, of the sentiment of aggressive hostility, which is the normal mood of some minds towards the nations of the East. We find this sentiment in excess, too frequently in the Indian press. If we can possibly avoid war with China, the Government must avoid it; and it is most unwise to be perpetually reproaching it, for its reluctance to draw the sword. It is about four months since Colonel Browne arrived at Shanghai upon his special mission to obtain reparation for the Yunan outrage, and the delay in enforcing it, is of course very unpalatable. As far back as June last Li-han-chang, the brother of the present prime minister, Li-hung-chang, was appointed an Imperial commissioner to Yunan to inquire into the circumstances of Mr. Margary's death; and although later intelligence appeared to show that the province was disposed to regard the murder with nothing but a feeling of insolent exultation, every one heard with satisfaction a week or two ago, that the Court at Pekin had determined to make full "reparation." It would be subject of just reproach to our country if, forgetting that we have constituted ourselves "the censors of mankind," we showed the same readiness to appeal to arms, which we have so often reprobated on the part of others. That the national honour is perfectly safe in the hands of the present Ministry, we may be sure, and it is seldom that popular pressure is exerted in favor of war, without mischief resulting therefrom. We had hardly finished writing these lines than the news reaches us that Mr. Wade has been successful after all, and that the prospect of war is for the present averted. The magnanimity of a great State is never so conspicuous as when it shows strong reluctance to lay its hand upon the sword, it would feign carry only in the scabbard. That we can crush both Burmah and China in a few weeks' campaign, is sufficient reason why we should be slow to go to war with either.

THE volunteer Rifles are now again drilling vigorously for another compaign, and may possibly be hoping to have an opportunity of acting as guard of honor to H. R. H., under their esteemed Colonel who is expected back in time. The cavalry who are trying to recuscitate themselves, have got a good many new adherents and if they will only exchange the cumbrous lance for a light carbine, or revolver, there is no reason why they should not rapidly attain a fair efficiency.

AT an anniversary dinner held at Lucknow the other day to celebrate the relief of the garrison by Havelock and Outram, a speaker took a genial view of the future life by proposing the health of the departed heroes who fought and fell at the siege. Let us hope the speech was heard in the happy hunting grounds.

THE new Zoological garden at Alipore is now in a fair way of becoming a fact. The inhabitants on the proposed site are busy removing their houses and their household gods, and Mr. Schwendler has generally promised his valuable collection of beasts as a beginning.

THERE are still heavy rains up in the North-West and Punjab, but in Bengal and Bombay the moonsoon appears to be over. The last day or two the weather has become much more bearable in Calcutta, and in the mornings there are whiffs of the cold weather already.

IT is reported that General Haines will be the new Commander-in-Chief in India.

BUSINESS is quite suspended, and there is nothing to report here under that head. The Bank of Bombay has reduced its rates of interest and discount 1 per cent. all round. The Chartered Bank has declared a dividend for the half year at rate of 5 per cent per annum, and the Delhi at rate of 4½ per cent.

IT is with great regret that we record the death of Baboo Peary Churn Sircar, Assistant Professor of English Literature in the Presidency College. The event, which took place on the 30th ultimo, has filled the educated community of Calcutta with gloom and sorrow. The Presidency College, and the Hindoo and Hare Schools were closed on Friday as a mark of respect for the deceased, and a Committee has been formed under the auspices of the Principal and Professors of the College, for the perpetuation of his memory in a suitable and abiding form. Baboo Peary Churn Sircar was born about the year 1822, so that at the time of his death he was only fifty-three years old.

INDIAN INTELLIGENCE.

BENGAL.

COUNTRY CLOTH.—In accordance with the resolution passed at the meeting of the native élite of Dacca, held on the 18th instant, a Limited Liability Company, with a capital of Rs. 10,000, each share being worth only Rs. 10, will be started for the sale of country cloths.

THE *Gazette* publishes a despatch from the Secretary of State to the Viceroy, giving formal intimation of the intended visit of H. R. H. the Prince of Wales to India. The despatch concludes with the assurance that the supreme authority with which the Viceroy is invested, as the representative of Her Majesty, will enable His Excellency to show how highly he estimates this proof of the Queen's good-will and her confidence in the loyalty of her Indian subjects, which are afforded by her sanctioning the visit of the Prince of Wales.

THE *Coconada Advertiser* draws attention to the inhuman system of carrying native passengers across the Bay of Bengal. It consists in crowding several hudreds of men, women and children on deck at a season when the weather is very uncertain, wet, and boisterous, with every hatch and access to below deck are barred and battened down. The steamer *Coomassie* arrived at Coconada from Rangoon about ten days ago laden with a full cargo of rice for Bombay; and it appeared that after receiving a full and complete cargo, her *deck space* had been chartered to a native, who crowded it with several hundreds of persons, regardless of their safety or comfort. The passengers complained very bitterly of their exposure on deck to rain and spray, and of the want of water, from which they say they suffered much. The moment they landed at Coconada they proceeded in a body to the Master Attendant's Office, and laid their complaints before that officer.

NORTHERN INDIA.

MR. A. RICKETTS, Civil Engineer, has been charged with bribery and corruption by Colonel Browne, Superintending Engineer. The date of trial is not fixed.

THE Forest Conference, Mr. Brandis presiding, began at Simla on the 4th October. Thirty-four Forest officers were to have been present.

ANOTHER of the Rajpootana chiefs has passed away. The celebrated Lukdhir Sing, claimant to the Ulwar *guddee*, has died at Jeypore of chronic dysentery, *en-route* from Ajmere to Ulwar, the seat of his ancestral palace.

THERE have been a series of religious meetings held at the Union Church, Simla, which have been very well attended. They have been presided over by Dr. Brodhead of Allahabad, Rev. Mr. Werry of Loodianah, Dr. Morrison of Subathoo, Rev. Mr. Morrison of Umballa, and Rev. J. Fordyce.

THE Simla Season is likely to break up early, we are told. The better part of its pleasures, those taken in the air, are utterly barred by the weather. The closing ball at Government House took place on Thursday last. Every available tonga from early in October to the 1st of November is pre-engaged. After five months spent mostly in the clouds, denied the brief interval of bright and buoyant days which were wont to speed the parting guest from the hills damp, dyspeptic, and dreary, the denizens of Simla are looking forward with a sense of relief towards the plains.

A YOUNG Brahmin at Akola scarcely out of his teens, lately professed Christianity at the Mission School, where he was employed as a teacher. The friends and relatives, after employing argument and persuasion to little effect, endeavoured to obtain possession of his person by artifice. They got a medical man to examine the neophyte with a view to pronounce an opinion adverse to his sanity, which was actually done, and the latter would have been hurried away to a lunatic asylum, had not the interference of the Assistant Commissioner been sought in time, and the young man released from further persecution.

THE Inspector-General of Police reported some time ago that infanticide exists in some few villages of the Purtabghur district. This has formed the subject of enquiry and correspondence, but we are not aware what steps have been taken to put a stop to this inhuman practice. Mr. Low, the District Superintendent of Police, thinks that there are "30 or 35 villages in the district in which infanticide is practised," and his careful enquiries give good grounds for his conclusions. He notes one painful fact—of 3,197 females over the age of four years in these 30 villages, no less than 820 are widows, not a few of whom have never been actually wives, and are for ever debarred from remarriage. The result of this unnatural state of society may well be imagined.

HIS HIGHNESS HOLKAR will hold a durbar during the Viceroy's visit to Indore His Excellency and Miss Baring will arrive at the Residency on the 12th November, and will be the guests of General Daly. A day will be spent in Mhow, where a levee will be held at General Montgomery's house. Lord Northbrook will then visit the old ruins of Mandoo, where a camp will be formed, and where there will be some *shikar*; and then he will proceed on towards Rutlam, where the young Nawab will entertain him and the camp and the party then move on to Neemuch. Sir Henry Daly and General Montgomery will accompany His Excellency to Rutlam, and a detachment of the Central India Horse will be the guard during stay of the Viceroy in Central India. Holkar will visit Delhi, with some State, as orders are given for a force of 500 Cavalry to be held in readiness to proceed with his camp. The Chiefs who will be in Indore during Lord Northbrook's visit will besides Holkar, be Dhar, Rutlam, Jowrah, and Dewas—possibly the Begum of Bhopal. Miss Barring from Indore will return to Calcutta.

IN a few days a very interesting experiment will be carried through its final stage of preparation by the opening, to the public use, of the Hattras and Muttra Railway. This little line is the first of a kind projected by Colonel Alexander Fraser, R.E., the well-known Chief Engineer, North-West Provinces, now at home on furlough: and if it succeed, it is hoped that it will be the precursor of an extended and highly useful system. The idea is to lay out lines on the terms of existing first-class roads, utilizing the earthworks and bridges already existing; all rolling-stock to be of the lightest possible description, and speed being confined to ten miles an hour. The line has been constructed at the average rate of Rs. 33,000 a mile, inclusive of all initial expenses, purchase of rolling-stock, building of stations, &c. A portion of the capital was raised by local subscriptions, on which there was a sort of Government guarantee of interest at the rate of four per cent. And it is understood to be the hope and belief of the Government, North-West Provinces, that the success of the line when opened will be so immediate and so brilliant that the natives in other districts will rush forward to invest wherever it may be deemed proper to extend the system.

PALE death has been busy of late among the princely palaces of Rajpootana. It seems but a short time ago since we heard that the Maharana of Oodeypore had been cut off in the vigour of youth, then that the Maharao Rajah of Ulwar had ceased to be a cause of anxiety, next the loyal chief of Jallawur was dead, then (incorrectly it would appear) that the Nawab of Tonk had fallen a victim to cholera, and now, as we have already informed our readers, the Rao of Serohi is gone. The Rao was chief of the little principality in which are situated Mount Aboo and the summer retreat of the Agent to the Governor-General. It is an ill-wind that blows no one good. Not many years ago it used to be said that the Native States of Rajpootana lagged sadly behind those of Central India. Whether it was that the strong hand of a Malcolm had been wanting, or that the British Government was precluded from such interference with the internal affairs of the Rajpoot States as is admitted by our engagements with Central India, or that the character of both chiefs and people was less plastic and less open to civilising influences, certain it is that comparisons were drawn, and those not favourable to the Princes of Rajpootana. Matters stand differently in that great province now. In the Maharajah of Jeypore (his mistake at Baroda notwithstanding), we have, perhaps, one of the most enlightened chiefs of the Empire. The loyalty and high character of the Rahtore Prince of Marwar are unquestionable. The young Maharana of Meywar is in leading strings under British supervision; so is the Maharao Rajah of Ulwar; so is the Maharana of Dholepore under the fostering care of Major Dennehy. The young chief of Shahpore is just emerging from tutelage; the chief of Jallowur has left an infant in arms; Kotah is in the hands of a Mahomedan noble imbued with the spirit of progress. Thus the way seems cleared in various directions for a rapid advance towards better things in Rajpootana. In Mr. A. C. Lyall, the Government of India possesses an agent of undoubted ability. It is for him and his subordinates to see that a great opportunity of raising Rajpootana out of the slough of old-world ideas is not lost.

BOMBAY.

THE Bombay address to the Prince of Walse will be enclosed in a cylinder of Cutch silver work which will be placed within a casket, designed by Mr. Walton of black and other woods and gold.

IT is understood that the G. I. P. Railway dividend for the past half-year will be fully 6 per cent. The Railway is said to have really earned 7 per cent., but the Government, alarmed at such prosperity, is believed to have insisted on costly renewals of rolling-stock which will make a large hole in the revenue,

THE G. I. P. Railway have made arrangements for the traffic over their line during the visit of the Prince of Wales to Bombay, which will facilitate greatly the movements of those who may wish to be in Bombay on that occasion. The custom with railway companies has usually been to allow to first and second-class passengers only return tickets on public holidays or occasions, but the G. I. P. have decided to allow all classes alike to have return tickets, so that first, second, and third-class passengers will be able to go to Bombay from all stations on the line from 15th October to 8th November, both days inclusive, at a fare and a half, and they will be allowed to return on any day up to and including the 30th November. For horses and carriages similar reductions and privileges will be given.

THE flame of Captain Webb's glory has electrified the souls of swimmers in Bombay. We learn that the first fruit of the enthusiasm for grand aquatics will be an endeavour by an amateur to swim from Malabar Point to the Prongs light-house. He has backed himself to achieve this great feat for the sum of two thousand rupees, only stipulating that he shall have a month's training before jumping in and putting off. The distance is not so great as that accomplished by Captain Webb, but it will have to be traversed against dangerous currents flowing from every point of the compass in succession—and in the teeth of countless sharks. The danger to be encountered may well compare with any that beset the famous Captain, and considering the relaxing character of the climate and the rapidity of the currents, the powers of endurance of the swimmer will be subjected to a test of great severity.

MADRAS.

ACCORDING to Simla gossip, Lord Northbrook is about to appoint a commission to inquire into the Government monopoly of Madras salt. The prayers of Mr. Corbett and the other Cheshire traders seem to have been heard.

INAMDARS.—Collectors of Districts have been informed that when an Inamdar falls into arrears it is necessary that the entire inam on which the arrears have accrued should be sold when the sale of a portion only will suffice to discharge the arrears. So far as may be practicable no larger portion than is necessay to discharge the arrears with interest and expenses should be sold.

LORD PIGOT'S GRAVE.—When the grave of the late Lord Hobart was being dug in the Fort Church, a leaden coffin bearing no inscription was found. It was supposed to be that of Lord Pigot, who died in 1777, while he was a prisoner at St. Thomas' Mount in the hand of his council. The matter was reported to Government and an order passed that a black marble slab be placed over the grave, with the words "In Memoriam," at the public expense.

THE zemindar of Ettapooram, in the Tinnevelly district of the Madras presidency, though yet a minor, has signified his intention to the Collector to expend Rs. 30,000 on the occasion of H. R. Highness' visit to Tuticorin. It is not known whether the Prince will pass through the young zemindar's estates and give him an opportunity of evincing his loyalty to the British raj; but it is hoped that Ettapooram will have the opportunity afforded him of entertaining the Royal visitor.

As the cool weather in the plains is approaching the Madras Government, now in the Neilgherry clouds, are beginning to show signs of vitality, just as frogs do when "the rain it raineth every day." Council will meet for the last time this season at Ootacamund on the 15th October; the unhappy under-strappers will then return to the bosom of their families, and a warm temperature; and subsequently, the fearfully overworked Members and Secretaries of the Government will tear themselves away from the Hills, and be received on their return to the capital with a salvo of artillery, and demonstrations of (official) admiration.

A NUMBER of ryots who own land in the vicinity of the Palace under construction for the Maharajah of Mysore, on the high ground, being required to give it up under the land Acquisition Act at Rs. 200 per acre, and refusing to do so, the matter was referred to the Court of the Judicial Commissioner, and the case was decided on the 29th ultimo. Mr. Anantha Rao, Assistant Commissioner, appeared for Government, and on hearing evidence, the court decided that as land for building sites in the neighbourhood of Bangalore had become exceedingly valuable of late years, Rs. 500 per acre was a reasonable price for Government to pay for the land wanted. This is the first time, we believe, that Government have, when requiring land, submitted the value to be put on it to the decision of a competent court of law.

SOME days back the signaller at the signal station just out of Goondacul, where the lines branch off to Raichore and Bellary, was on the look-out for an incoming train. Hearing a noise he turned round, and saw a large monkey, belonging to a Railway official at Goondacul working away at the signals. A struggle thereupon ensued, and the monkey caught the poor man by the throat, and bit him savagely. At Goondacul the Railway people thought the signaller had gone mad. The volunteer has of course been destroyed. Considering the aptitude for signalling shown by this animal, and that there are plenty of his community about India, would it not be a good plan to start a monkey signalling class? We commend this to the notice of Accountant Cheeseparers in general.

A CORRESPONDENT mentions a rather curious circumstance which took place in Bangalore a short time ago. A gentleman, who is a Frenchman by birth, but has held a commission in the British army, and has officiated as a Magistrate for many years past, was about to try a case, when one of the parties to the suit rose and objected that the Court had no jurisdiction. "Why?" asked the Magistrate. "Because your Worship is a Frenchman," said the native. The answer astounded the Magistrate, upon whom information that he had long ago forgotton had apparently come with novel suddenness. "You are quite right," he said to the objector after a pause, "the Court has no jurisdiction. I dismiss the case." Next day the Magistrate took privilege leave for three months. It is difficult to say what will be done when he returns to his duties.

A LETTER in the *Madras Times* says: The trial of the town Sub-Magistrate on the charge of extortion terminated on Wednesday last, in his conviction and sentence to pay a fine of Rs. 150, which he immediately paid into court, and was released. The local community seem to view the sentence as very lenient, as a simple fine is no punishment to a person in the Sub-Magistrate's circumstances; and it is even believed that the Joint-Magistrate has not awarded imprisonment with the fine owing to some external pressure brought to bear on him with the assurance that a dismissal from his duties would be a sufficient punishment to the delinquent; but now that the case is concluded, whether the sentence will be followed up with his immediate dismissal from the service, remains to be seen. It does not appear, however, that we have heard the last of this case, for, just as it was generally expected, Mr. Rajahram is now about to become a victim to local intrigues. On the same day that the Sub-Magistrate refused to make any defence, a petition was sent off to the Political Agent, stating that the Joint-Magistrate had attempted to extort a thousand rupees from the Sub-Magistrate to let him off, with some other scandalous insinuations against his private character; and the Political Agent has since forwarded the petition to the Sirkele for report thereon. In the meantime, a rumour is current that the Sub-Magistrate is about preferring an appeal from the sentence of the Joint-Magistrate, and that it is already arranged to quash the sentence, so as to make it a ground for restoring him to his duties, he being now under suspension. From the intrigues now in progress in this matter, it is easy to see which way the wind blows. However, a charge of breach of trust has just cropped up before the District Magistrate against the same Sub-Magistrate, as it appears that he lately received the sum of Rs. 10 to open a water-pandal for travellers during the past hot season, but that he appropriated the money to himself, as no water pandal was opened by him in the place at which he was directed to do so.

CEYLON.

WE hear that there is every probability of Sir Edward Cresy returning to Ceylon in case his pension should be disallowed by the Colony. The report that Mr. Begbie of British Columbia is to be his successor seems gaining ground.

ASIA.

THE Peshawur correspondent of *Indian Public Opinion* learns "that there is at present a vakeel from the Russian Court at Cabul, who is said to be a Turkoman, sent by the Russian Governor to lay before the Amir some political propositions. Amongst other things demanded, our correspondent learns that the Czar wishes a passage through Cabul to India. The terms of the communication, we learn, have been transmitted to the British Government for consideration, while the Russian vakeel is still awaiting a reply in Cabul."

MILITARY.

ONE effect which may be certainly considered as beneficial to the service and to the country, has resulted from the abolition of purchase, and that is the increase of "gentlemen" recruits. We are constantly hearing of gentlemen entering the ranks with a view of ultimately obtaining commissions in the army. The Cavalry is considered the best field, but one Militia man and an old Volunteer have selected the Artillery, where there is little or no prospect. An ex-Subaltern of the 29th Regiment has just donned the blue tunic of a very smart Cavalry Corps, and another retired officer has enrolled himself in a "marching regiment." Doubtless there are numerous other instances. We only quote a few that we have heard of.

THE Simla correspondent of the *Pioneer* writes: Mr. Morris, a subordinate of the Inland Customs Department, is at present here endeavouring to urge on the authorities the adoption in the army of a new method of capping the present Boxer cartridge, by which it can be re-capped after use, and a vast saving effected. The plan is so simple that it could be worked either by the soldier himself, or in the regimental workshop. For sporting purposes, the invention is a great improvement on the present systems, which are so tedious that only the most parsimonious attempt them, and then with indifferent success. Mr. Morris's invention was reported on most favourably two years ago by a Select Committee of officers at Lahore, appointed by the Commander-in-Chief. But the course of invention, like that of true love, never runs smooth; and the Ordnance Department found certain objections, which Mr. Morris believes he can show to be without foundation. May his fond hopes be realized. Boxer himself had a rough time of it, before he *realized* over his own inventions. The argument used by the open-hearted War Department in his case was that, being an officer employed in the Ordnance, Government was entitled to the benefit of all the products of his intellect. This, however, cannot apply to Mr. Morris, and as there can be no connection between salt and cartridges, he will be entitled to a large honorarium if his invention is adopted.

GENERAL.

THE Rev. W. Taylor, the Methodist Revivalist preacher, has arrived in New York. He is said to be looking for suitable recruits to be sent in for the reinforcement of the work in India.

MESSRS. HEAD, WRIGHTSON & Co., of Stockton-on-Tees, have entered into a contract with the Japanese Government to supply the whole of the necessary plant for two blast furnaces which are to be erected at the Heygori mines, in the north of Japan, where it is a said that a rich, ore, containing 50 per cent. of metalic iron, exists. These will be the first blast furnaces constructed in that part of the country. The professional adviser of the Government is Mr. David Forbes, F.R.S., of London, Secretary of the Iron and Steel Institute.

A STORY about Mr. Lowe. is going the rounds. At a dinner party under the hospitable roof of the right honorable gentleman, the conversation turning upon the introduction of many unnecessary passages in the marriage service, the ex-Chancellor of the Exchequer referred to the absurdity of a man who had no property whatever, gravely declaring that he endowed his bride with the whole of his possessions! "Now, when I married," said he, "I had not a shilling in the world." "But," chimed in his wife, "you had your splendid talents." "Well, but I didn't endow you with them," was the smart rejoinder.

FURTHER particulars respecting the loss of the *Vanguard* state that the ram of the *Iron Duke* struck her about four feet below water-mark. An artificer, at the imminent risk of his life, ran down into the engine-room, and let off the steam. But for this

a terrible explosion would have occurred, and destroyed probably the lives of all on board. The after-portion filled first, and the water rushed into the engine-room extinguishing the fires. Tho ship gave a lurch, and sinking stern foremost went down in an inclined position ; on reaching the bottom she righted. The *Iron Duke* was greatly shaken. Several plates were wrenched, but she does not leak. Her bowsprit, jibboom, and some woodwork, were carried away.

THE LOSS OF THE "STUART HAHNEMANN."—The Board of Trade inquiry into the loss of the East Indiaman *Stuart Hahnemann*, which capsized in a squall in the Indian Ocean, has been concluded at Liverpool. Captain Edgell, one of the witnesses called said the *Stuart Hahnemann* was alarmingly overmasted and oversparred ; but Mr. Johns, assistant surveyor at Lloyd's, and several other experienced men who were examined, considered that her masts and spars were only in proportion to her hull, and also that she was sufficiently ballasted It was submitted on behalf of the owners that the loss of the vessel was due to an error of judgment on the part of the captain having too much sail set in such weather. It was stated that the captain (Captain van Norden) was a man who was very fond of pressing his ship under a great deal of sail The Court did not deliver judgment, the captain's certificate not being before them, but will report to the Board of Trade.

THE NEW LAW ON "TRADE MARKS."—The act which was passed at the end of the session, and to which special reference was made in the Royal Speech on the prorogation, has just been issued. It contains eleven provisions, and its object is to establish a register of trade marks, under the superintendence of the Commissioner of Patents. The office is to be established not later than the 1st January next, with such officers and salaries as the Lord Chancellor may direct with the consent of the Treasury, and general rules are to be made as to fees and other matters to carry out the new law. From and after the 1st July next a person is not to be entitled to institute any proceeding to prevent the infringement of any trade mark, as defined by the Act, until and unless such trade mark is registered in the manner prescribed. Much will depend on the general rules to be framed for carrying out the statute, and there are regulations as to the Cutlers' Company and Sheffield Corporate marks. The register can be rectified, but the mode of procedure will be set forth in the new rules to be promulgated.

ACCORDING to the credits voted by the National Assembly, the following are the works to be executed for the French Navy in 1876 :—The sum allowed is 30 millions, and the Minister proposes to apply it to 50 ships, which have either to be completed, continued, or put on the stocks. Out of that number seven are first-class ironclads, five second-class ditto, eight armour plated coast-guard vessels, eight gun-boats, nine cruisers, and eight transports. Those vessels are, or will be constructed at Brest, Cherbourg, and Toulon. Some, however, will be confided to private manufacturers. In a letter to the *Journal des Debats*, Admiral Pothuan, formerly Minister of Marine, states that, at the present moment, France possesses 19 armur-plated ships of the first-class ; 9 of the second-class ; 13 armoured-floating batteries for coasting service : 8 cruisers of the first-class; (not iron-plated); and 12 of the second-class; 18 screw advice boats ; 27 screw transports ; 19 gun boats, &c.—making a total of 144 vessels. To these may be added 65 paddle-wheel ships, 35 sailing vessels, and 82 war vessels of various dimensions, belonging to the old fleet. giving a total of 326 vessels, not including those in course of construction.

THE revision of contract settled by the French Government and the directors of the Messageries Maritimes, contains the following with regard to the Indo-China services. The regular steamers of the company are bound to accomplish yearly a total length of travel of 221,078 marine leagues, as follows : 154,960 leagues on the main line between Marseilles and Shanghai, with a departure at each end every fourteen days; 21,571 leagues on the branch line between Aden and the Mauritius, with a departure every twenty eight days ; 11,700 leagues on the branch line between Point-de-Galle and Calcutta, with a voyage every twenty-eight days ; 4,767 leagues from Singapore to Batavia and back, with a voyage every twenty-eight days, and 20,080 leagues on the branch line from Hong-Kong to Yokohoma, with a voyage every fourteen days. The concession of the Indo-China services of the company, and of all its other existing services, will come to an end on July 22, 1888. From July 22, 1876, till then, the company will receive from the French Treasury, as a subsidy for its Indo-China lines, a fixed annuity of 8,573,024f., paid in monthly instalments. The Government is bound to give notice, three year before the expiry of contract, of their intention to renounce the services of the company, or to go on with them after July 22, 1888.

A CORRESPONDENT of the Paris *Patrie*, writing from Turin, gives an account of an interview he has recently had with Louis Kossuth, the ex Hungarian Dictator. at which the insurrection in the Herzegovina formed the principal subject of conversation. Kossuth is reported to have expressed himself to this effect :—If any political idea is mixed up with this movement, it undoubtedly emanates from Prince de Bismarck, whose favourite notion is to urge on Austria to aggrandise herself in the East, in the hope of recompensing himself by the annexation of Cis-Leithiana. I do not look upon Count Andrassy as a great statesman ; nevertheless, I believe he comprehends the danger which would arise for the Austro-Hungrain Monarchy, and particulary the Magyar Kingdom, by annexing the Sclave populations. The fact must not be concealed that Prince Milano of Servia is placed at present in the alternative of losing his crown or risking the existence of his state, for the great majority of his subjects desire war. If the principality takes part in the movement, that step might induce an immediate intervention of Austro-Hungary, which it would entail on the part of Russia. If the Bosno-Herzegovina rising is regarded from this point of view it has a certain gravity ; but Turkey will succeed surely and rapidly in repressing the insurrection. In my opinion, she can, that is to say, she possesses resources and means more than sufficient for that, even admitting the participation of Servia and Montenegro in the struggle. As to the flame spreading to Bulgaria—the inhabitants of which are about 75,000—that is not to be feared for the moment. That eventuality would only arise if the rebellion should persist and gain in strength and power. The conduct of the Andrassy Cabinet in these circumstances is not able ; for, on the one hand, it authorises Turkey to disembark troops at Klek and Sutyrina ; on the other, it does not withdraw its sympathies ; from the Eastern Christians. To endeavour to remain on good terms with everyone is to attempt to realise the impossible. No great success is to be hoped from the collective action of the consuls with the leaders of the insurrection. They are not men to yield to reasons of high policy, and the risk is great that diplomatic subtleties will fail with them. In fine, the most propitious solution would be an energetic action on the part of Turkey, and in case of necessity some concessions.

THE SUPREME COURT OF JUDICATURE.—The statute to amend and extend the Supreme Court of Judicature Act, 1872, has just been printed. It is a very long one of 49 sheets, and is to be construed with the other one, and, with the rules and orders to be observed, will be food for consideration during the present long vacation. The new law, consisting of the two Acts, will come into operation on the 1st of November. Notwithstanding the provisions in the principal statute abolishing the appellate jurisdiction of the House of Lords, the right is to be reserved until the 1st of November 1876. The present number of Judges is not to be reduced. The constitution of Her Majesty's Court of Appeal is declared, and there will be divisions of the Court—Queen's Bench, Common Pleas, and Exchequer. All the officers of those Courts are continued, and on appeals are to attend the High Court of Justice. The Probate Court and the Court of Admiralty will act in divisions, and the present Judge of the latter is to give up his ecclesiastical appointments if he accepts the appointment of one of the Judges of the High Court before the commencement of the Act. The London Court of Bankruptcy is not transferred to the High Court. A plaintiff has option as to which division he will sue in. Three Judges are to constitute the Court of Appeal. Before and after the commencement of the Act, rules may be made for the sittings of the Courts, &c. and Her Majesty is empowered by Order in Council to make regulations as to the circuits of the Judges. There are other provisions to carry out the new law, and the last section, number 25, provides that the present Chamber Clerks may be reappointed on a vacancy at the same salary. The statue only extends to seven sheets, and the remaining 42 comprise the orders and forms. There are 63 rules and numerous forms set out to be used. There is to be no local revenue, and causes may be tried before a Judge or before a Judge and assessors, or jury, or official referee. Although terms are abolished, the "long vacation" is preserved, and is to commence as usual on the 10th of August and terminate on the 24th of October. There is to be a vacation of a week at Easter, Whitsuntide and Christmas. Two of the judges, however, are to sit in the vacation for the hearing in London and Middlesex of such applications as may require to be immediately or promptly heard, and they may sit either together or separately as a Divisional Court. The vacation Judges of the High Court may dispose of all actions, matters, and other business of an urgent nature during any interval between the sittings of any division of the High Court to which such business may be assigned although such interval may not be called or known as a vacation. The two statutes, with the various rules, and others to be added, will require much attention. The Courts now known as Queen's Bench, Common Pleas, and Exchequer, with the Probate and Admiralty Courts, will still exist in their several divisions, and "Her Majesty's Court of Appeal" is now substituted for the Court of Chancery. The ordinary Judges of the Courts of Appeal are to be styled "Justices of Appeal." The two statutes on the Supreme Court of Judicature will take effect, as stated, on the 1st of November.

LATEST TELEGRAPHIC NEWS.

London, 29th September.

THE rate of discount ruling in the open market is 2 per cent (same as Bank rate.)

The sum of £108,000 was withdrawn from the Bank to-day for Germany.

ARRIVAL.—*Saint Marnock, Burdwan, Nagpore,* and *Bulen.*

London, 1st October.

THE revenue of the United Kingdom for the last quarter amounted to £16,375,000, showing an increase of £375.000. The report of two Servian Officers having been shot by Turks on the Servian frontier is unfounded.

London, 2nd October.

CHARTERED Banks of India and Australia and China, and Delhi and London Bank, have declared half-yearly dividends at rates of 5 per cent. and 4½ per cent. respectively per annum.

London 2nd October.

THE *Times* is authorized to state that none of the programmes published, respecting the Prince of Wales' Indian tour, are accurate. Nothing is yet settled beyond Calcutta. The Prince will probably go up-country to Jummoo visiting the camp of exercise at Delhi and some of the native capitals in Northern and Central India. The *Times* publishes a telegram from Rangoon dated 2nd instant stating that Lee See Thae has escaped and been disgraced, and that the officials are torturing the inhabitants of Manwyne and endeavouring to discover assassins of Margary. A Telegram also states that offensive and defensive alliance has been concluded between Burmah and China.

London, 2nd October.

THE Homeward Mails *via* Brindisi, which left Calcutta on 7th and Bombay on 10th September, were delivered on Saturday.

The sum of £250,000 was paid into the Bank and £169,000 withdrawn to-day.

The price of wheat has advanced 1*s.* per quarter.

ARRIVAL—Ship *Sea Queen*.

London, 5th October.

MR. WADE has notified to the Foreign legations at Pekin that his negotiations with the Chinese authorities have averted the prospect of immediate war. Sir Garnet Wolseley has returned to England. Chinese Agents have arrived in Vienna for the purpose of purchasing smooth-bore bronze guns. The latest advices from Spain state that the Carlists are displaying renewed activity and are bombarding Pampeluno and Saint Sebastian.

Shanghai 1st October.

MR. WADE'S ultimatum regarding negotiations with the Chinese Government would expire yesterday.

Hong-Kong 2nd October.

THE Captain and Mate of the German Schooner *Anna* have been murdered by the Chinese crew near Foochoo. The gun-boat *Cyclops* has proceeded in search of the vessel.

Belgrade 4th October.

THE Servian ministry have resigned. The legislature supports the pacific policy of Prince Milan. The Foreign Consuls have been instructed to remain at Mostar.

Constantinople 4th October.

THE Sultan has issued a decree, suppressing a fourth part of the tithes and promises fiscal reforms.

LIST OF PASSENGERS.

ARRIVALS.

The P. and O. Co.'s S. S. *Cambesi* Commander A Simons, arrived in Bombay, on Thursday the 30th ultimo, with the following passengers :—

FROM SOUTHAMPTON.—Mr. J. Humby, Mrs. Withers, Mr. A. B Nixen, Mr. H. Cookson, Capt, A. L. Towys, Lt and Mrs. Ewing, Mr. Malcolm Low, Mrs. Paxton, child and infant, Mr. G. H. Wright, Mrs Watkins, Col. and Mrs. Barclay, Mr. H. E. Bale, Mr. and Mrs. D. Cook and infant, Mr. and Mrs. J. H. Webster and three infants, Mr. W. Pope, Miss. Z. Swift, Mrs. Dare and infant, Mrs. Sadler and infant, Miss. Parish, Mrs. J. Miles, Mr. J. Heenan, Mr. P. H. Heenan, Mr. J. J. Hutton, C. E., and Mr. J. Andrews.

FROM VENICE—Mr. T. E. Glover, Dr. C. E. Bensley, Mr. T. J. Preswell, Dr. J. N. Continho, and Mr. H B. Finlay.

FROM BRINDISI—Mr. and Mrs. V. A. Smith, Mr. and Mrs. T. L. Brown, Dr. G. W. Bensley, Mr. R. Brookes, Col. P. M. Macdonald, Miss Gabell, Surgeon-Major Bidie, Mr. F. Fawens, and Mr. Mong Mya.

FROM ADEN—Ten natives, deck.

DEPARTURES.

THE following is a list of passengers per S.S. *Penang* which left Calcutta on the 4th instant for Chittagong, Akyab and Kyouk Phyoo :—Mr. J. V. Woodward, Mr. Wm Ewing, Junr, Mr C. P. Hill, Mr. A. N. Mell, Mr. Francis Sills, Mr. J. M. McLean, Miss, Roberts, Miss Evershed, and Mrs. Canoongui and two children. Second Class—Moulvi Abdool Wahab.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

PORTABLE ENGINES,—Clayton & Shuttleworth's

	4 H. P.	6 H. P.	8 H. P.	10 H. P.
Prices, with Single Cylinder .. .. Rs.	2,700	3,250	3,900	4,500
	10 H. P.	12 H. P.	16 H. P.	20 H. P.
Do., with Double Cylinder .. .. Rs.	4,750	5,000	6,250	7,500

REVERSING GEAR,—Extra, at Rs. 200 to Rs. 400, according to size.

STATIONARY ENGINES.—Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

	2 H. P.	3 H. P.	4 H. P.
Prices .. .. Rs.	1,400	1,500	1,650

FIRE ENGINES,—Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

CENTRIFUGAL PUMPS.—The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

SPECIAL STEAM PUMPS.—Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.
PRICES.—No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.
PRICES.—No. 4, Rs. 100; No. 5, Rs. 125. Charges for ditto supplied extra, at Rs. 4 per tin.

STEAM ROAD ROLLERS.—Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's .. .. Rs. 3,000 | ALBION DRILLING MACHINES .. Rs. 325

Steam Hammers,

3 cwt., with fittings complete .. .. „ 1,250

Soorkee Mills,

with 6-feet pan and rollers complete .. .. „ 1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

	No. 4.	No. 6.	No. 8.
Prices .. .. Rs.	70.	90.	135.

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

F. & C. OSLER, CALCUTTA.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)
CABINET MAKERS, UPHOLSTERERS,
BILLIARD TABLE MANUFACTURERS,
BY APPOINTMENT
To His Excellency the Viceroy and the Governor-General of India,
AND
His Royal Highness the Duke of Edinburgh
CALCUTTA.

THE NEW PATENT
ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far
THE HANDSOMEST AND LARGEST
ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Infantile Fever Powder.

Of the greatest value for CHILDREN suffering from *Fever* in consequence either of *Cold, Derangement of the Bowels* or *Teething*, as also in various *Eruptions of the Skin, Thrush, Diarrhœa, Opthalmia*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Tonic Antiperiodic Pills.

Invaluable in *Ague, Intermittent Fevers of all kinds, Ague and Spleen;* and all those diseases that partake of a *Periodic character.* Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Spleen Pills.

Has cured thousands of cases of Enlarged Spleen—See full directions in Pamphlet. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Aperient Pills.

Mild, prompt, safe and uniform in their action. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Antibilious Pills.

More especially suited for acute diseases, such as *Continued Fever, Headaches from exposure, Bilious attacks*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Restringent Mixture.

A pleasant, safe, certain and effectual remedy for *Diarrhœa or Looseness of the Bowels*, certain form of *Dysentery, Incipient Cholera, Cholic, Griping Pains, Flatulency, Cramps in the Stomach*, &c. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Cholera Drops.

Full directions given in the Pamphlet. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Laxative.

A safe, certain and useful purgative; *may be taken alike by young or old.* Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Carminative.

Of the utmost value in attacks of *Cholic, Griping Pains, Wind in the Stomach, Diarrhœa*, and other disorders to which young children are subject. Rs. 2 per bottle.

☞ Does not contain opium in any shape. ☜

DR. E. J. LAZARUS'S

Balsamic Expectorant Drops.

Of the greatest benefit in *Coughs, Colds, Hooping Cough, Chronic Pleurisy, Hoarseness, Asthma, Pain in the Chest, Difficulty of Breathing, Bronchitis, &c.* Rs. 1-8 per bottle.

DR. E. J. LAZARUS'S

Family Hair Tonic.

Stands unrivalled for the production of ELEGANT (LUXURIANT) GLOSSY and BEAUTIFUL HAIR. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Embrocation.

For *Sprains, Sore Throat, Stiffneck, Quinsey, Pain* or *Stiffness of the Joints, Chronic Rheumatism*, &c. &c. &c. Rs. 1-8 a bottle.

A Printed Pamphlet giving full instructions will be found wrapped round each bottle.

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendors.

These return tickets to Bombay will be available for passengers only to or from the new Musjid station between Bombay and Byculla.

HENRY CONDER,
General Traffic Manager.

Bombay, 24th September 1875.

No. 1707A. of 1875.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon:—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold: said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to: (1) Haldwani; (2) Kaladungi (*viâ* Naini-Tal); and, (3) Ramnagar (*viâ* Khyrna). From Haldwani to Bareilly Railway Station 60 miles over a *pucka* cart-road; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road; and from Ramnagur to Moradabad 45 miles *viâ* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

1, 2, 3—markets at the foot of the hills.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable: a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godown, and numerous out-offices, all slated; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given: failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,

Offg. Secy. to Govt., North-Western Provinces.

No. 1708A.

COPY forwarded to the Commissioner of the Kumaon Division for information, with reference to his letter No. 681, dated 23rd July 1875.

No. 1709A.

COPY, with 50 spare copies, forwarded to the Secretary to the Bengal Chamber of Commerce, with the request that the Notification may be distributed to all firms interested in tea cultivation.

No. 1710A.

COPY also forwarded to the Superintendent of the ——— with the request that the Notification may be published in the ——— not less than four times.

HIBBERT'S

HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:

"April 23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A., writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship Sidney A. Jenkins."—Dundee. May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Botties, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

INSIST ON HAVING HIBBERT'S SALINE.

AGENTS FOR CALCUTTA,

BATHGATE & CO.

PRINCE OF WALES'S

ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No. 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13th May 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, ESQ., C. E.,

Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.

Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary.

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

GREAT EASTERN HOTEL, *Calcutta, 17th January* 1874. NIAUDE, *Secretary.*

Calcutta, 28th December 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,

F. & C. OSLER.

CALCUTTA.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS,

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

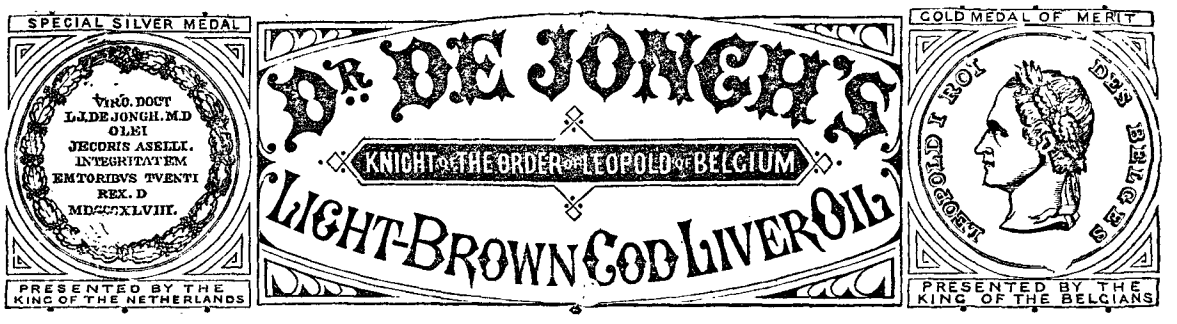
The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 *per year only, payable in advance.*

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit*."—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.

POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.

ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fall of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their *option*, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which *limits* the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2118.] Calcutta: Saturday, October 16, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs. 13-10 as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

NOTICE.

SO much regret has been expressed at the discontinuance of the *Indian Economist* and its Supplements, that Mr. Knight has determined to publish on the 1st December next, the first number of a new monthly journal of Indian Agriculture, Mineralogy, and Statistics, the prospectus of which will be found in our advertising columns. The circumstances under which the *Indian Economist* was discontinued, have not been made public, and probably never will be. Suffice it to say, that the stoppage of the paper deprived the country of the only Agricultural, Industrial, and Statistical newspaper it possessed; and the new journal is designed to partially supply its place. The subscription will be Rs. 12 a year only, and Mr. Knight believes that he may count upon sufficient support, to warrant his announcing the publication without further delay. The new paper will be somewhat larger than the old *Agricultural Gazette of India*, and more comprehensive in its range, but will be strictly technical and in no way political or controversial. A limited space only will be allotted to advertisements.

EDITORIAL NOTES.

COUNT E. G. D'ALVIELLA has been appointed special correspondent to the *Independance Belge* to report the Prince of Wales's Indian tour. Count d'Alviella, says the *Pall Mall*, is an accomplished political writer and scientific traveller, and he is also a member of the Provincial Council of Brabant. His appointment to report the Prince of Wales's tour for the *Independance Belge* proves the importance attached on the Continent to the Prince's Indian visit.

***

A CONTEMPORARY, having for some time past amused its readers with detailed programmes of the Prince of Wales's movements in India, now delivers itself as follows:—The *Times* corroborates what we have already stated, that the Programme of the Prince of Wales's tour is not determined. The *Times*, however, is wrong in declaring it to be unsettled beyond Calcutta. It is not yet settled *for* Calcutta, nor will it be absolutely, until His Royal Highness arrives in Bombay."

***

WE would draw the attention of our readers to a letter in our correspondence columns from Mr. W. H. Newnham C. S., appealing to the charity of the public at large on behalf of the sufferers from the recent terrible floods in Ahmedabad. Liberally as Bombay and other parts have been aiding the sufferers, we are assured that there is still *great* need of further help, and we trust the public in general will come forward with their usual liberality to swell the relief fund.

***

IT is to be earnestly hoped that we may yet be visited by a few showers of rain. Delightful as the dry atmosphere and the cool north breeze may be after the languor and suffocation of September, it is yet too soon for the rains to have finally ceased, and only the unthinking can rejoice. It is, however, only in parts of Behar and Bhaugulpore that we believe there will be any important failure in the crops, but there is too much reason to fear that, in those districts, there will be a deficiency which without causing actual famine will entail considerable hardship on the inhabitants. A few rainy days before the end of the month would effect an improvement, both there and over the greater part of Bengal.

***

A BOMBAY correspondent writes to us concerning the Commission appointed to enquire into the causes of the late riots in the Deccan:—"The Commission now sitting at Poona opens up the whole question of the power and policy of State protection to the more helpless classes of the community. The outcry against the Courts is a most senseless one, and the remedy, as far as a remedy is possible, is to be sought rather by extending the discretion of the Courts than by excluding their jurisdiction. On the other hand, the mistake is as great by saying that the State can do nothing as of saying that it can do everything. It can do a great deal in the way of gaining time for the moral change without which no merely external reform can be permanent.

***

THE *Pall Mall*, in making some remarks on the equipment of troops, reminds its readers that "Napoleon impressed on his Marshals the truth that a soldier's shoes are the most important parts of his campaign outfit." If the Indian authorities are not above taking the advice of a practical soldier like Napoleon I. they ought to look to the shoeing of their sepoys. It is well-known that native troops cannot march far in the boots supplied to them by a wise and paternal Government, and although they have, on our ordinary Indian roads, the pleasing alternative of marching barefoot, this method of rectifying shortcomings in equipment would be hardly practicable on rough ground. An army of cripples may be all very well in time of peace, but there are occasions when it is necessary to have troops able to walk, if not to run.

***

IN the course of some observations on gunnery, the *Borsenzeitung* says that the competition which has existed between the English and the German guns since 1868 may now be regarded as definitively closed in favour of the latter. "The English guns have been driven step by step from the Continental markets, and is now not a single State which will use English guns for its navy or the defence of its coasts. Only the other day a trial took place in Japan of the English heavy Woolwich guns and the German breechloaders, in which the former proved decidedly inferior, and the English gun-makers have thus lost their last customer except Brazil." We have never quite known the reason why our artillery experts have preferred muzzle-loading to breech-loading guns. Is it because we have so many gunners that their protection under fire is not so necessary in our case as in that of Germany?

***

THE Porte, not being able to borrow any more money, has taken the first step towards repudiation by reducing 50 per cent of the interest due to bond-holders. The balance is, indeed, to be paid in the shape of bonds, but the value of these in the market will be merely nominal. By this arrangement, Turkey will save about 7½ millions in 1876 alone, the annual interest on her debt being £15,000,000. At the end of the five years, the issue of bonds in lieu of interest in cash will have nominally added about £40,000,000 to her debt, entailing an additional liability of two or three annual millions. It will, of course, then be necessary to increase the percentage of interest payable in unsaleable paper, and in a very few years, if Turkey exists so long, the happy creditors of the State will be the holders, in satisfaction of all demands, of a periodically increasing pile of Turkish bonds, till they either make a bonfire of the lot to economise space, or

are put out of their misery altogether by a total collapse in the Turkish Stationery Department.

***

WE commend the following recipe to the attention of enterprising gentlemen who may be anxious to refill pockets emptied by poojah festivities. Carefully select a subject in the shape of a Calcutta resident who is about to leave the country, and who is not in the habit of perusing the Small Cause Court Chronicle. Obtain a summons against him in the local Small Cause Court. By a little "judicious profusion" to the extent of ten rupees or so, arrange to have the summons delivered to the said resident's *mehter* on his master's premises and quietly destroyed by the recipient. You will then obtain a decree *ex parte*; take out execution, and have the warrant served just at the time when the subject of your experiment is about to leave for England or elsewhere. He will be sure to pay up rather than forfeit his passage-money and postpone his departure. Some people may say that a law under which such a proceeding is possible seems more or less defective, but this does not concern you. You deal with things as they are, and your intelligent appreciation of the situation will be pecuniarily advantageous to yourself.

***

THE *Turkistan Gazette*, as might have been expected, endeavours, with that love of truth which is characteristic of a Tartar, to throw cold water on British and Indian trade-enterprise in Kashgar. One of its correspondents tells us that during the past year "a large quantity of goods, including muslins, shawls, chintzes and tea, came from India; but the tea and chintzes found but few purchasers, as they were of very indifferent quality. The goods which were not sold were sent to various parts of Khokand, Andidjan especially." The correspondent adds that Russian goods meet with a much more ready sale in Kashgar than English goods, which are bad and dear. If the statements of the Russian merchants are to be credited, not a yard of English chintz was sold in Kashgar this year. "The green tea, which comes from India," proceeds the correspondent, "is very bad; Russian tea is greatly preferred, and the English traders have to go to Khokand for purchasers. Among the other Russian goods for which there is a great demand in Kashgar are sugar, pepper, candied sugar, and red, green, and cinnamon-coloured cloths. The representative of a Russian firm, who went there the other day, sold all his goods in a short time, and was paid in cash and bills, after which he proceeded to Khokand to buy some of the products of the country.'"

***

IT is complained that the change made two years ago in the rules for serving criminal processes in the Mofussil of these provinces is working very badly and oppressively. It was formerly the rule that these processes should be executed by the police, without charge. But years ago an order was issued that in future they should be served by a special establishment of peons, and that fees should be charged for them. The effect has been to add very considerably to the cost of all proceedings before Magistrates. In an ordinary case, the complainant's outlay formerly was about two rupees; while it is now four. In other words, the cost of obtaining redress for the most petty injuries, such as illegal cesses, destruction of crops by trespassers, the redemption of cattle from the pound, and the hundred-and-one acts of small oppression to which the ryot is subjected, has been doubled. The income of an average ryot is not more than five rupees a month, and he feels the loss severely. Four rupees may seem a small sum; but four-fifths of a family man's monthly receipts are to him a very serious loss. How is a poor half starved cultivator to find four rupees in payment of Court processes before he can protect himself from the ill usage to which he is so subject.

***

IF we may trust the *Times*, the Russian Ministry is convinced that the Khokand rebellion was fomented from Kashgar. An agent of Yakoob Khan has made his appearance at Odessa, but must have left before these events. It is most doubtful, we should think, whether Russia will do more than make a note of the matter, even should she have this conviction. For the difficulties of an advance beyond Khokand into Kashgaria are nearly insuperable. The Duke of Edinburgh has been fêted with extraordinary enthusiasm at the celebrated fair of Nijni Novgorod. The merchants presented him with a salver worth two thousand roubles, and entertained him at a banquet. The *Moscow Gazette* takes credit to itself for having predicted that the marriage between the Duke and the Grand Duchess Marie, would be beneficial not only to the two countries, but to the whole civilised world. If Englishmen would but be a little less concerned about Khokand, and Khiva, and Kashgaria, and Merv, we think it would be a good deal wiser. The prospect of a threatened war between Japan and the Corea has again obtained currency, from the announcement that the Corean ruler has declined to grant an audience to the envoys to his Court from Japan. The relations between the two countries would seem to be far from cordial, but it is to be hoped that actual hostilities will be avoided.

***

AT a period when civilization has almost eliminated the romantic element from human life, it is a positive pleasure to know that in this humdrum world it is still possible to find places where the good old traditions of the past are affectionately remembered and occasionally recalled in a practical way. The gay young bloods of 1875 cannot, it is true, emulate in the streets of London the feats of the Mohawks; nor can adventurous yeomen take to the woods after the manner of Robin Hood and his merry men; but the railways still afford facilities to those whose imperfect human nature (*vide Pioneer*) prompts them to insult and outrage defenceless maidenhood; and there are in parts of Spain and Italy forests in which, by an introductory murder or so, a bold adventurer may enjoy the privilege of becoming a member of the modern Robin Hood fraternity. In like manner, modern Christians who wish to experience the ecstatic sensations of the early converts in the days of Imperial Rome, have only to naturalise themselves in certain provinces of Turkey administered by Mahomedan Pashas; and Jews who lament the good old days of King John may find consolation in the same quarter. The *Pall Mall* tells us that a Jew at Bagdad, named Ychanda, having been accused of blasphemy, "has been horribly maltreated and afterwards burned by the populace of that town. Several other Jews were also ill used. Ychanda being a native of Hamadam in Persia, it is expected that the Teheran Government will take steps to obtain redress."

***

THE *Pioneer* (October 6th) draws a touching picture of the fruitless search by the Government of India for a member of the Civil Service qualified to hold the office of Secretary to the Board of Examiners, and implies that their anguish at seeing themselves reduced to appoint a Lieutenant Talbot, an attaché in the Foreign Office must have been poignant. Of Mr. Talbot's special qualifications for the post we know nothing. But we may be pardoned for doubting whether a more diligent and leisurely inquiry, would not have revealed to Government the existence in the ranks of the Civil Service of several men thoroughly competent to fill the appointment, and, it may be, of one or two whom to have passed over will hereafter be justly held a reproach. In his place in the House of Commons, Mr. Lowe referred to the case of a civilian of thirteen years' standing, a distinguished Oriental Scholar, who had been refused an appointment in the Educational Department, for no apparent reason except that he had the misfortune to belong to the Covenanted Civil Service. Sir W. Muir will know whether this gentleman's claims were taken into consideration on the present occasion, or whether he (Sir W. Muir) allowed the Government of India to remain in ignorance of his existence. Sir W. Muir's reputation as an Oriental Scholar forbids us to suppose that he was not consulted, or that his recommendation would not have been accepted, or that he is ignorant that the gentleman of whom we write is eminently well qualified for the appointment.

***

FOLLOWING up a suggestion in the daily papers, that the community should commemorate the visit of the Prince of Wales with "something that will bear fruit in the grateful remembrance of thousands," the Rev. Mr. Bromehead suggests that we should perfect the system of the Calcutta Free School, by the addition to it of an infant department. Those who know the Free School best have long felt that the absence of such a department is a most serious drawback to the school doing its work efficiently and properly. "There are numbers of children, between the tender ages of five and seven years old, who simply are not fit to rough it in a great large school. They are *little children*, and they would be happier and better off in every way, if they were tended, kept, and taught as *little children* should be. No doubt they are as well taken care of, and educated too, under the circumstances as they can be; but they would be very much happier, and better brought forward, in bodily health and mental culture, and very much more calculated to make progress in the upper departments of the school, and far likelier to succeed eventually in the great battle of life, if they were in charge of a well-trained infant schoolmistress, who could devote all her time and energies to their well-being and nurture. The

reports of the Free School for years past have recognized the want of an infant department, and the governors have recorded their opinion that it should never be lost sight of, and should be established on the first possible occasion. Now, if the great public will only just say so : this is the occasion."

***

A LOCAL contemporary, whose powers of miscomprehension are in a high state of development, sometime does good service by shewing how we may at times be misunderstood by the less intelligent or more random of our readers. He quotes a sentence from our columns with reference to the doctrine of everlasting torments, which runs as follows: "It is one of the painful necessities of this controversy that we cannot oppose this dreadful error, without appearing to be insensible to the perilous character of sin." His remarks upon this lead us to state, what we should hardly have thought it needful to state, that though rejection of the doctrine appears to many of its upholders to argue an insensibility to the perilous character of sin, no such insensibility can, or ought to, be charged against either free enquirers or decided rejecters of the doctrine. It is not only absurd to suppose that any such insensibility should lie at the root of a careful investigation of Scriptural teaching, but it is unjust to ascribe it as a cause of the strong revulsion of natural feeling from the appalling dogma. Not only will as tender consciences be found among those who oppose, as among those who receive, the dogma, but we are inclined to the belief that a familiar contemplation of the imaginary horrors of the orthodox hell by those who "believe that they believe" *in them*, has a tendency to deaden the conscience. And we are also inclined to believe that the preaching of this monstrous fiction has driven more men away from the blessings of the Christian faith than it has moved to repentance. It has driven many to impiety, but it can never produce contrition.

***

THE Flying Squadron, to convoy the Prince, under Admiral Rowley Lambert, C. B., will consist of the *Narcissus* (flagship), Commander Alfred Jephson ; *Doris*, Capt. Hon. E. R. Fremantle, C.B. ; *Immortalité*, Capt. Francis A. Hume ; *Newcastle*, Capt. R. G. Douglas ; *Raleigh*, Capt. George Tryon, C.B. ; and *Topaz*, Capt. Thrupp. The fleet will meet the *Serapis* at Aden, and act as convoy thence to Bombay, which the Prince of Wales is expected to reach on Nov. 9, the anniversary of his birthday.

The following gentlemen accompany the Prince :—

The Duke of Sutherland, in no official capacity.
Lord Alfred Paget, temporarily attached to His Royal Highness.
Sir Bartle Frere, G.C.S.I., temporarily attached.
Mr. Albert Grey, private secretary to Sir. B. Frere.
Dr. Fayrer, C.S-I., in medical charge.
Lord Suffield, Lord-in-Waiting.
Major-Gen. Probyn and Lieut. Col. A. Ellis, Equerries.
Mr. Francis Knollys, Private Secretary.
Mr. W. H. Russell, LL.D., Assistant Private Secretary.
Captain Lord Carington, Royal Horse Guards, A.D.C.
Lord Charles Beresford, R.A., A.D.C.
Lieut. A. FitzGeorge, Rifle Brigade, Extra A.D.C.
The Rev. Canon Duckworth, Chaplain to His Royal Highness.
Mr. Sidney Hall, Artist.
The Earl of Aylesford, Extra Equerry.

In addition to this staff there will be a taxidermist and botanist. Mr. Isaacson, of the India Office, in charge of the presents, will be included in the suite of His Royal Highness ; and Herr Kreyser, the eminent bandmaster, will have charge of the corps of musicians from the Marines.

***

THE *Pioneer* of 28th September informed us that "no despatch is now expected on the subject" of the redress of the grievances of the N.-W. P. Civilians. We accepted this oracular utterance with the more implicit faith that we had indifferent good reason to believe that a strong communication on the subject must have been received by "India" some two months ago. And, as it concerns the honor of the Government of India to make full and prompt reparation for a course of action which has been so strongly reprobated by public opinion here and in England, we cordially shared in the hope, somewhat faintly expressed in the same editorial note, that "half measures would find no favour." We trust therefore that we shall hear no more helpless twaddle as to the insuperable "difficulty of providing a remedy," or sentimental cant about the "Indian tax-payer." It is the inevitable destiny of tax-payers all over the globe to pay for the blunders of those who govern them. British tax-payer had to pay pretty smartly for the carelessness of their rulers in the matter of the "Alabama." If the Indian tax-payer has any just cause for complaint, it is not against the public servants who have been wronged, but against those whose conduct has rendered a claim for compensation irresistible. We are pleased to see that the Secretary to the Civilians' Committee has come forward with an emphatic contradiction of the *Pioneer's* assertion that Mr. Lowe discredited his advocacy by errors of fact, or over-statement. The Civil Service owe it to their eminent advocate, and to those who have managed their case at home with such marked ability and success, not to suffer these allegations to pass without the unqualified denial of which the facts notoriously admit. We are curious to see how the *Pioneer* will meet this challenge, and shall be glad of a little detailed information as to who "the best friends of the cause" may be, and why they have taken on themselves to make the painfully candid admissions attributed to them by the *Pioneer*, but which, strangely enough, are indignantly repudiated by those on whose behalf they are said to have been made.

A good man contending with adversity is said to be a sight worthy of the gods. The *Pioneer* under the conflicting influences of official inspiration, and unwillingness to offend the Civil Service, cuts a figure which must cause inextinguishable laughter among the more cynically disposed of the dwellers on Olympus.

***

THE *Pioneer* charges Government with something like a breach of faith with its educational officers in connection with the higher appointments of the service. The charge is made with special reference to the appointment of Rao Sahib Narayen Bhai Dhankedar, Principal of the Poonah Training College, to the Directorship of Public Instruction in Berar. Now it is perfectly natural that men who have carried off honors at the English Universities, and have been tempted to come to India with their "blushing honors thick upon them," should expect a monopoly of the highest posts of honor and emolument which the department can confer. And we do not think that as a rule they have much to complain of in this respect, for the majority of appointments certainly fall to their lot, though we are not aware that Government lies under any express obligation to limit its patronage to them. It was certainly contemplated in the great education despatch of 1854, that any duly qualified officer, Native or European, might be chosen under the proposed system for any, even the highest, post in the service, though it was recommended that, for obvious reasons, a civil servant should, at the commencement, be put at its head. While there is, as far as we know, no obligation lying on the Government to limit its choice to Oxford and Cambridge men or even to Europeans, there may be strong reasons why *ceteris paribus* a native should be preferred for such a post as the Directorship of Public Instruction in Berar. It begins to be suspected by many earnest observers that our system of education is very far from being the perfect system which most educational officials not unnaturally seem to think it is, and notwithstanding the undeniably high attainments of our educational officers, the quality of the education we are giving to the natives of India stands charged with defects of the gravest nature. It is also doubted if the highly qualified and highly paid officials in the Department are willing to open their eyes frankly and fully to these defects. What may be the qualifications of the new Director of Berar we do not know, but we are not disposed to admit any other criterion of his fitness than his personal qualifications. If a better man was available for the post the appointment is a mistake of course ; if no better man was available, the fact that he is a native is in his favour. A really enlightened native in such a post may do a great deal for the educational progress of his countrymen ; more, we believe, than most European officers could do.

***

THE *Pioneer* tells us that ex-Colonel Baker has written "direct to General Kaufmann, offering his services for the command of a Brigade of Cavalry of the Russian army in Central Asia, and binding himself, in case his offer were accepted, to denationalize himself and become a Russian subject," and our contemporary goes on to make the following perfectly astounding comments on the offer in question : "Colonel Baker has been justly or unjustly cast aside by his country. The English army will know him no more. He is not a rich man and cannot afford to be idle ; but all honorable professions are closed to him. Society of course, holding itself outraged, would refuse to receive him : and if he tried to live in a lower state of life, the middle and lower classes, perhaps justly, more furious than his equals, would see him starve. Rejected as he is by his country, he is surely justified in seeking another. Is he further jus-

tified in the particular choice he has made? His offer to denationalize himself clearly shows his belief—and Colonel Baker's belief in such a matter is of no mean value—that should his offer be accepted by the Russians his interests and those of England will be adverse. Not long ago we touched upon his knowledge of Central Asia. Combined with his undoubted skill as a cavalry officer, and further supplemented by an avowed indignation at the treatment he has received, Colonel Baker's special experience would make him a formidable enemy. He will be able to revenge himself. Is he to be blamed? If mankind were perfect, Colonel Baker would most likely be starting to India with the Prince; but mankind unfortunately is not perfect, and a large margin must be allowed for original sin. Acknowledging our wickedness, must it be allowed, Colonel Baker has chosen the only course open to him? He have submitted tamely to the punishments heaped upon hi might try to revenge himself. Which of these two ways generally be chosen by an English soldier."

In spite of facts of the most indisputable nature, the *Pioneer* is not quite sure whether Colonel Baker has been justly caste aside by his country—*i.e.* society. Admitting the fact that "all *honorable* professions are closed to him," it believes it to be possible that the Czar would be glad to bestow high command on a broken English officer who was willing to become a traitor to the Sovereign whose uniform he had disgraced. Since when, may we ask the *Pioneer*, has it been the fashion to officer the Russian army with the rejected outcasts of other nations? The officers of the Russian Army are by no means inferior to English officers in birth, breeding and professional pride; and if Colonel Baker seeks a high command for purposes of revenge, he had better apply to the King of Burmah or the Emperor of China, or qualify himself for a Turkish Pashalik, than submit his credentials to the Head of the Romanoffs. Our contemporary asks if he is to be blamed for wishing to revenge himself on a country and a Sovereign by whom brutal outrages on women are unjustly regarded as unworthy the character of an officer and a gentleman. Such outrages, the *Pioneer* thinks, are only natural, mankind not being perfect, and ought to be attributed to original sin ! ! !

***

THE escort difficulty with His Majesty of Burmah has been to all appearance satisfactorily settled. The King, through his Minister of Foreign Affairs, has signified his willingness that, if a British Mission require to be sent through Burmah to China, it should be accompanied by an escort of British troops sufficient in strength to protect it from attack and insult. Our bellicose contemporaries, who lashed themselves into fury on this subject a short time ago, will probably now admit that their condemnation of our Government for its supposed utter failure in the negotiations with the Avan court was somewhat hasty and inconsiderate. Though the King's persistent refusal to permit the passage of a sufficient escort would doubtless have been a sufficient *casus belli*, the fact that the refusal has been overcome by firm but deliberate diplomacy furnishes the final justification of Government in refusing to adopt hasty measures after the so-called failure of Sir D. Forsyth's negotiations. Notwithstanding some empty criticism on our recent remarks on this subject, we adhere to our expressed opinion that the fact that we are, if necessity should arise, able to crush, with comparative ease, the united strength of China and Burmah, is the best of all reasons for not rushing into a bloody war with such Powers until peaceable negotiations have been fairly tried and have proved utterly fruitless. Those journals that are continually insisting on the precarious nature of our prestige in the East are really doing all in their power to weaken and endanger that prestige. As regards Burmah, it has been observed that the King is desirous to be informed of the strength of any escort the British may desire to send through his territories before it shall set out, and the probability is hinted that he may then object to the escort on the ground of its being stronger than necessary. Such a difficulty may, of course, arise, and the time to meet it will be when it does arise. Meanwhile it cannot be denied that the King's request is perfectly reasonable. We do not hesitate to condemn Government unsparingly when we see proof of real weakness, such as is too often apparent, but in our dealings with barbarous Powers we are fully convinced that calm deliberation is not only the best sign of real strength, but is sure to be justified by the ultimate result. It cannot be denied that the apparently shuffling character of the dealings of Chinese officials with our representative is calculated to provoke resentment, and is such as in a European Power would call for a speedy suspension of friendly relations. It appears from the latest of the perversely contradictory telegrams that have appeared of late from China, that the prospects of settling the Yunan difficulty are still doubtful. It may, perhaps, be a question whether or not the Chinese Government has the power to satisfy us fully on this point, by bringing the perpetrators of the outrage to justice. But it ought to show clearly, and must be compelled to show clearly, that it has done all it can to effect this. We are still hopeful that a recourse to war may be unnecessary, but the Government must insist on its demands being fully complied with, though it must at the same time take care not to demand an impossibility. We are not quite sure that we yet know China and its people sufficiently well to justify us in dashing suddenly into war because the Chinese will not look through British eyes on their relations with foreigners. It is stated, wever, that the *Pekin Gazette* has published an edict, enjoining per treatment of foreign residents, a proof that although John inaman may be quite willing to cheat or insult us if he can, e is not inclined to fight us, and will make reparation and accede our wishes, if we can be at once firm and patient. It is the alternation of feeble remonstrance and assured fury that is the usual weakness of our dealings with such Powers.

THE COUNTRY IN DANGER.

IT is well known that the War Office, has been giving considerable attention of late to putting many of the English coasts and dockyards into a proper state of defence. Sheerness, Chatham Dockyard, and the whole line of the Medway are now protected by heavy guns in casemated forts, and all the old martello towers have been destroyed. Latterly, the authorities have been busy on the coasts which lie between Colchester, Harwich, and Oxford, where there is no obstacle to the successful landing of an enemy on that part of Essex. Surrounded by the sea, and having for several centuries ruled the waves, as one of our national songs informs us, and never having, except with the consent of a large proportion of the inhabitants, allowed any foreign nation, since the days of William the Conqueror, to set hostile foot on our shores, we have reached the state when a successful invasion of the country is by the majority deemed an impossibility, and sheltering ourselves under the ægis of our navy, we rest in calm security. We are far from being alarmists, but the words of De Tocqueville revert to us, "For my own part I cannot but "censure the imprudence of attempting to limit the possible "and to judge the future, on the part of a being who is hourly "deceived by the most palpable realities of life and who is con-"stantly taken by surprise in the circumstances with which he is "most familiar." However improbable, it is very possible that a well-armed and equipped force of a dangerous strength might be landed at our coasts on more points than one, and the question is—Does our defensive force rest on a system conducive to unity and cohesion in the field, and under which concentration on a given point could rapidly take place? We believe that the concentration of a force on definite points of our coasts has already been arranged, but what these forces are to be, where they are to be collected, and how shaped into a well equipped army with its stores, material, &c., complete is a point still *in futuro*. Our railways could perform the most that could be required of them, if the men *were* there.

The subject of this article is one of peculiar importance to England in the present day, being the question of army efficiency and organization. It is needless to advert to the many thousand volumes that have been written on the deterioration or otherwise of the physique of our soldiers. To the simple and unsophisticated it would appear that a good deal of time and trouble has been spent in chest measurements and standard heghts, but curiously enough statistics, which in this case ought to be able to cause the fermentation of argument into the alcoholic liquor of assertion, does not appear to be invoked by either side; in fact the question remains pretty much where it started from, and we do not propose to attempt to move it. After all, the real point at issue is, do we get the best men obtainable for the work; and even this pales in importance and is secondary to the question of the strength of our army, and the organization under which the largest number of efficient men can be obtained in time of need. Under our present system we have a *small* effective force: we want a *large* effective force.

Continental nations have been compelled to settle their

army organization by the march of events, without room for argument. The obligation of every man to defend his country is apparent; and as in these days the defence of a country has acquired a more extended meaning than was connoted by the expression previously, and implies not only fighting the enemy when he is in the country, but preventing his ingress at all by attacking him in his own country, almost every able-bodied man becomes a soldier liable to be employed either in, or out of, his own country. The necessity which has caused this return to the old, uncivilized period when every man was obliged to be a soldier, has not yet made itself sufficiently felt in England to cause any action to be taken in the matter. But the Press has not been *idle*, and there have not been *wanting* earnest and *startling* appeals warning us of the danger incurred by not altering and cementing the organization of our forces, so as to place them more on a par with the armies of her neighbours, which consist of well-organized millions, for offensive or defensive purposes. Compulsory service is utterly distasteful to the English people not only because of hereditary instinct and its being in antagonism to our conceptions of liberty and freedom, but because of its being so detrimental to the interests of our manufactures and commerce. No one can fail to see the difficulties that exist, but the way to surmount these difficulties has not been brought before the public so as to blend opinions into any unity.

We wish we could show how the men are to be got, and blazen forth a plan which would set argument on the subject at rest and until the next change in affairs takes place when our Statesmen will have to busy themselves as to the best method of getting the required number of able-bodied men into the ranks. All that can be done is to put our ideas on the subject in print, that they may be the means of suggesting others until some scheme is found which may at last gain a trial. The means of offence need not be considered now. There is our Navy which certainly ought to be offensive enough. Also it may with some reason be asserted that if our means of defence are thoroughly matured, our power of assuming the offensive will, when the opportune moment arrives, evolve itself in a practical and efficient manner. What have we then as a defensive force? There is a small army which scarcely admits of expansion: the militia and the volunteers. The whole force available, it is generally admitted, is numerically inadequate. But it has another weakness or ailment, greater even than its want of strength. It is not only weak, but it is disjointed. In other words instead of being one homogeneous force, trained, disciplined, and commanded on a single system, we have three descriptions of officers and three descriptions of men: the men trained to war not amounting to more than fifteen per cent. of the whole; with a half-trained militia; and the partially-trained volunteer. We have not educated our officers, who are the sensory and motory nerves of our force, to use physiological language, with any equality of training or qualifications. If we picture to ourselves the actual working of such a tri-partite force in the haste, turmoil, and confusion of a period of alarm; and with a well-trained, highly-organised force on our shores, there is some excuse for those who are doubtful of the issue. The qualities developed by discipline and training, are pre-eminently wanted at such a time, and the method of obtaining these qualities in as large a proportion as possible, has to be found out. The problem that presents the greatest difficulties is that of obtaining really effective reserves. The militia is inadequate; while the reserves supposed to be coming into existence under Mr. Cardwell's scheme already show symptoms of extending into a very thin red skirmishing line without any supports.

But our readers may ask what has become of the Volunteers? Well, they have not been forgotten: and very useful they would be as an auxiliary force, but a force which from its nature, cannot be looked upon as a reserve. Hitherto, the volunteer force has only sprung into being at a time of danger, and with the disappearance of the danger ceases the existence of the force. It is not so in the present instance, simply because the danger has existed, is existing, and well exist permanently. The real fact is the times have changed, although we decline to recognize it, and the organization of our forces must be altered to suit the times. If the people would but see this, the noble spirit shown in our volunteer force would soon produce the force now required. Of the many schemes that have been brought forward, the one which appears to carry with it the elements of hope and success and the possible avoidance of conscription or compulsory service, is that of deferred pay, not originated but elaborated by Captain French. If we want a more efficient army we must pay for it; and one of the merits of the scheme under consideration is that it reduces the amount to a sum that would be little felt. It proposes to meet the increase of pay which it necessitates, by the abolition of pensions. Although the pay of the soldier is increased, he cannot spend it, as a large number would on drink and dissipation as soon as issued. Instead of having to be invalided or pensioned earlier, as would be the case if his pay was immediately increased, the soldier might indulge in day dreams during his constitutional walks, as to what he will do with his £125 when he leaves the army and marries Betsey. By deferred pay is meant that the soldiers should receive another sixpence a day, but that this sixpence should be kept for him until he took his discharge, or on expiration of his service. The present conditions under which he enlists are for twelve years' service in the army, or six years' service in the army and six years in the reserve. The twelve years' army service man can re-engage for further periods if physically fit. This system would be continued. The twelve years' service man would be entitled to receive on leaving the army £125. Three-fourths of this he would receive immediately, the remainder in yearly instalment, if he enters the militia, for five years. The six-year army service man would have earned on leaving the colors £60, three-fourths of which he would receive at once, and the remaining £15 during his service in the reserve: the reserve pay being increased from 4*d.* to 6*d.* a day, but the extra 2*d.* in the form of deferred pay. This might be extended to the three years' service men; the obtainment of the deferred pay being dependant upon a six years' service in the reserve.

The details could be modified or arranged so as to offer the greatest inducements to good men to enter the army. Many minor questions would present themselves: such as the best means of retaining good Non-Commissioned Officers, a difficulty that is not consequent upon the adoption of the deferred pay system, but is already under Mr. Cardwell's scheme, causing considerable anxiety. The duty of the Non-commissioned ranks is often unpleasant, and of such a nature that many men shrink from the odium of its performance and prefer remaining private soldiers. To meet the growing difficulty the pay of the Non-commissioned ranks must be increased and it might be necessary, as Non-commissioned officers would be men who having passed a long period of service in the army and are not likely to be able to turn to another profession, to allow them pension. Would the deferred pay system enable us to raise our reserve to a really effective strength, and one not liable to melt away from us at the moment of need? We think it offers the best means yet suggested for attaining this end, if liberally and wisely applied, and though by its liberal application the country may have to pay more for army charges than at present, it is worth trial before resorting to the undesirable, but otherwise almost inevitable, compulsory service. It is also a matter of consideration whether some such scheme might not be adopted in India to take the place of the present cumbersome and very expensive pension establishment.

THE OPIUM TRADE.

ONE of the most irritating circumstances that attend the discussion of the Opium question is the difficulty of getting at the facts concerning it. After many years' attention to the subject, we confess that we are unable to form an opinion as to the effects of opium upon the Chinese people. Our impression is that those effects have been so much exaggerated that it would be most unsafe to base any action thereon. On the other hand, it is most difficult to believe that there is not some solid ground for the remonstrances constantly

addressed to us on the subject. The Protestant Missionaries of Canton in a body have now sent in a representation upon the matter to the Anglo Oriental Society for the suppression of the trade, claiming consideration for their views on the ground of their united testimony to the following facts :—

1. The Empire and people of China are daily becoming more and more demoralized and impoverished by the increasing use of the drug. The moderate use of opium, granting that such a use is possible, is uniformly regarded by Chinese Christians as sufficient reason for refusing admission to the Church; and though none of us enforces such a rule in regard to the use of spirits, we do all believe that the danger of excess is so much greater in the case of opium that this rule in regard to it is necessary.

Now, who that notes carefully the terms of this first head of the memorial can possibly believe what it affirms? The empire and people of China mean 400 millions of the human race. Now what, we ask, can the sixteen mssionary gentlemen at Canton possibly know of this vast mass of people concerning whom they nevertheless affirm that they are daily becoming "not only more and more demoralized" but more and "more impoverished by the use of this drug." Reduced to its proper dimensions, the memorial would simply have expressed a fear that the use of opium was increasing in the Empire, and that it demoralized, if it did not impoverish, those who indulged therein. To say that the drug is daily more and more impoverishing and demoralizing the people of China, when not one Chinaman in a hundred probably can afford it, is the style in which all these remonstrances are couched. Again of what use is it to tell us that the Missionaries think the use of opium so much more liable to abuse than that of spirits, that while allowing the one they forbid their converts the other. They may be right in so doing: but who is to build anything upon it? The second statement of the memorialists, though awkwardly and indeed ungrammatically expressed, is more to the purpose,

The moral sense of the people of China, whether addicted to the vice of smoking opium or not, is opposed to the traffic, and condemns all concerned in the importation of the drug.

This is probably true; but the statement is worthless for legislative purposes. The moral sense of every people condemns much that is done in the midst of them, but that no one would propose to put an end to by law. The next objection runs as follows :—

The fact that people of Christian nations engage in the traffic, and especially that Great Britain to a large extent supplies the China market with opium, is constantly urged as a plausible and patent objection to Christianity. The heathen acknowledge the superiority of the Christian theory of morals to their own, but ask triumphantly, "Where is the superiority in practice?" They, of course, buy the poison and inhale it, but "why do Christians bring it here and sell it?" It comes, as it were, with a recommendation from Christian nations.

It is very proper for missionaries to deplore this, but what sensible person would adduce it as a ground of legislative action to Parliament that cares about as much for converting the Chinese to Christianity, as for converting the missionaries to Buddhism. The two next objections are full of the strangest economic reasoning, and indeed are almost silly :—

British India has lately been visited by famine, and may at any time suffer from the same calamity. But although a part of the soil of British India is diverted from its proper use in order to produce a deleterious drug for the China market, the exportation of rice from China is prohibited by the Government. It is really a wrong therefore to the natives of India to compel them to produce opium, or to license them to do so, in order to fill the imperial exchequer, and to gratify a morbid and ruinous appetite of the Chinese.

On the other hand, if the patriotic sentiments of the Chinese were met by the abolition of the opium trade, they might reasonably be required to sanction the free exportation of rice in case of scarcity in any neighbouring country. The demand for useful British and American manufactures is kept at a low figure in China by the impoverishing and enervating effects of opium; and it would no doubt be greatly to the advantage of the manufacturing interests of these countries to have the supply of opium to China stopped.

Though China did not import a chest of opium, it is doubtful if Manchester would benefit one shilling thereby, while it is certain that India would suffer heavily by the loss of the most valuable of her exports. The memorialists have not even a glimpse into the true nature of the economic problem they raise: and to reply to them we should have to begin with the alphabet of the science. The final point of the memorialists is based upon the fact that the "demand for "foreign opium having been sensibly checked by native cultiva- "tion, there is *now* an opportunity for Great Britain, by a noble "act of self-sacrifice, to give a check to the ruinous consumption of opium in China, by immediately reducing or "stopping the supply. The effect would be all the greater, the "more prompt and decisive the action taken. And, on the "contrary, delay or very gradual reduction of the supply "would, by giving time for the native growth proportionately to "increase, be fatal to the success of our benevolent enterprise." It is almost impossible to suppress a smile at a simplicity, which can persuade itself that the people of Great Britain will be influenced in the very least by such appeals. The consumption is known to have largely increased of late years, while the import of the Indian drug has remained stationary. Our Consul tells us that "the drug is so highly prized, and the local executive are everywhere so easily bribed," that the prohibitions against the cultivation of it are practically useless. Indian opium is weighted with an inland tax of 10 per cent. on the value, and foreigners are not even permitted to accompany it into the interior. These disadvantages are of course a premium to native cultivators to learn how to grow and prepare a drug equal to the Indian. The importance of the subject so far as regards the revenue of this country cannot be overrated, and the suggestion that a Commission of Inquiry should be appointed with a view of ascertaining the probable future demand for the Indian drug seems to merit consideration.

It is idle to oppose either the Government monopoly or the private traffic in opium, on religious grounds. No Government exists or probably ever will exist that would deal with the question except on economic and fiscal considerations the objections, says Mr. McCulloch.

The objections that have been made to the trade in opium because of its supposed injurious influence over those by whom it is used, do not seem to be entitled to much weight. There are no good grounds for thinking that it is at all worse than brandy, gin, wine, or other stimulants. All of them are mischievous, as are most things, when taken in excess, but not otherwise. We do not anathematise the growers of barley, or distillers, or the importers of wines or spirits, and why should we adopt a different course in dealing with the cultivators and sellers of opium? Sir Benjamin Brodie, P.R.S., than whom there can be no higher authority, contends that the use of opium is not so injurious as indulgence in spirits. "The effect of opium," says he, "when taken into the stomach is not to stimulate, but to soothe the nervous system. It may be otherwise in some instances, but these are exceptions to the general rule. The opium-taker is in a passive state, satisfied with his own dreamy condition, while under the influence of the drug. He is useless, but not mischievous. It is quite otherwise with alcoholic liquors. When Bishop and his partners murdered the Italian boy that they might sell his body, it appeared in evidence that they prepared themselves by a plentiful libation of gin. The same course is pursued by housebreakers and others who engage in desperate criminal undertakings. It is worthy of notice, also, that opium is much less destructive to the understanding than gin or brandy. Many opium-takers live to a great age, while dram drinking induces diseases of the liver, with their attendant bodily suffering, ill-temper, wretchedness, and premature death." It would be useless or worse to attempt to add anything to this conclusive statement. It disposes satisfactorily of the moral part of this question. It is not easy to imagine a more unexceptionable source of revenue than the tax laid by the Government of India on opium when exported. It is no part of their duty to look beyond the interests of their own subjects; but it is evident that in raising the duty on opium to the point at which it will yield the greatest amount of revenue, they are consulting, at one and the same time, the best interests of their own people and those of the Chinese. A large amount of revenue is produced for the service of the former by a tax laid on an article consumed by the latter. But as the abuse of opium, which, like the abuse of spirits, would be highly prejudicial, is checked and in part prevented by the duty, it is plain that the well-being as well of the buyers as the sellers of the drug is promoted by its imposition. The tax is in truth one of the very best that has ever been imposed; and its productiveness is not one of the least of its good qualities.

A NEW ADDISCOMBE.

IT is most unfortunate for the country as well as for the Army, that so much dissatisfaction exists among Indian officers as the result of our mistaken measures. The grievances of the Indian Officer are by no means at an end. There is scarcely a newspaper we take up, in which one or more complaints are not to be found concerning the Staff Corps, with the evils that have sprung from that unfortunate institution. It would take much time to chronicle the ills attributed to Sir Charles Wood's obnoxious *corps d'elite*, but there are one or two of them which are so evidently real grievances, that we make no apology for their brief discussion. One of the first aims of the Indian Staff Corps, as every one knows, was to provide "smart" officers for the command of native regiments. It was a part of the original scheme, that the Staff Corps officer should have an exceptional knowledge of the vernacular, and all things appertaining to the command of the sepoy soldiery. As a guard against old age and incompetency, Staff Corps promotion was made very rapid for those days: and we think it was calculated that an officer might attain command of a regiment in twenty years' service, or about the age of six or eight and thirty, let us say. It was also thought that the second in command, and the wing officers of the then newly organised regiments would be of the rank of Captain or even Lieutenant: and wonderful were the hopes excited in consequence. Young fellows looked to be Major-Generals and Brigadiers of the Indian Army in the prime of life; and for a brief space of time the *esprit de corps* of the new institution was exceedingly strong. The pecuniary prospects of the members were also magnificent. The Major-commanding was expected to draw one thousand a month, and each captain and wing officer something like seven hundred. No wonder that the Army saw an El Dorado in prospect, and took full advantage of Lord Salisbury's permission to enter the Corps, when Lord Salisbury could do nothing else with it. Indian officers generally were in the greatest haste to enter a service that promised so much; while they have reaped nothing but disappointment, and the more fortunate "Local" officers have looked on, laughed and superseded the Staff men in every direction. One by one, all the golden prospects of the *corps d'elite* vanished into air. It was turned into a great "siding," into which every obstructive or worn-out officer was shunted out of the way, while still in some sort in use. Ancient Colonels were thrust into regimental command, and Colonels hardly less antique were put into the wing appointments, which were originally intended for Captains and Subalterns. To increase the disgust at these measures, it was soon found that the salaries allotted to regimental appointments were *bogus* incomes; for whenever an officer was appointed "officiating" or "acting" in one of these posts, he received but half the income belonging to the appointment, while some one in Europe perhaps received the other half. As time passed, confusion became worse confounded. Promotions in regiments were made on a variety of systems after a variety of Commanders-in-Chief: and no one knew whether seniority, selection, or what, was to be the rule of advancement. Hundreds of officers who entered the corps, on the understanding and promise of remunerative staff employment were thrown out of employ altogether, and relegated to general duty on the bare staff pay of their rank, without any allowances whatever. Many others, less fortunate still, were sent all over the country from regiment to regiment, and were involved in debt as the result of long marches and "acting" pay. The younger men saw with despair the failure of their ambitious hopes, and learnt that the chances were greatly against their obtaining a command at all, while the best they could hope for was one when they were old and prepared to accept pension. But regimental command is the great prize of Indian service. It is the one thing, the one hope, that renders the hideous monotony of life in a native regiment tolerable. Men will dispense with society, or cheerfully endure the bickerings of a little regimental social circle away in the jungles, in the expectation of some day securing a command. Take away this prospect from them and there is little to live for: nothing in fact but to go for ever through the dull routine of subordinate duties, even while possessed of the too delusive title of Colonel. Naturally the disappointment has been very great; so great that it is hard to think the officers of the Indian army now living can ever possibly recover it. Instead of being members of one of the most attractive services in the world the men were reduced at a blow to membership of a service that offered propects of scarcely anything but pension. Nor has time done much to improve the situation, or redeem those faults of organisation which have rendered the corps the lamentable failure that it is. The service is senile to a degree. There is no young blood in it. It can shew few subalterns on its rolls—there is only *one*, if we are not mistaken, in one of the native armies—a paucity of Captains, and only a monstrous mob of Colonels. It lacks the animating element of popularity: in fact it has none. The only officers of the corps who do not grumble from morn to night, are those who have found it the stepping stone to civil employ, or who have obtained regimental command under its vague laws of promotion. The Indian staff corps in a word is a huge failure, and it is necessary for the State to consider how far it can rectify one of the greatest blunders ever perpetrated in the country.

As far as we can judge, it appears to be the policy of the Government to allow the corps to right itself with time, and possibly opportunity. A certain number of old officers are purchased out annually to keep things as level as they can be made under the circumstances, but the public observes with dismay that, every time five thousand pounds or so is paid to be rid of a Colonel, another steps into his place: for of Colonels there is no end. Meantime there are few Captains, and fewer subalterns. These officers are in process of steady transformation to the grade of Colonel, and all that special purchasing seems to do is to put a new batch of field officers into the places vacated by the old ones. As for the intellectual vigor of the service, or its attainments as a *corps d'elite*, it is proverbially behind even the Line. Its members are too old to go to school, and too hopeless of getting any thing by talent to exert it.

Our own impression is that it would be better to abolish the Corps outright than to play with it any longer. It has already led us into heavy expense, and it is impossible to see the end of our futile disbursements on it. It fails in all its objects, and is a manifest failure. It cannot give the native army any officers but Majors and Colonels. It offers a young officer no training suitable for service with native troops, but just the reverse. It is deficient in *esprit de corps*, and is a service only in name. Whatever attractions it possesses it keeps for its civilian members, while it practically brings the army for which it is supposed to recruit into contempt by holding out superior inducements to young gentlemen to enter political life. In vain we search for anything connected with it to counterbalance its disadvantages. There is not a single plea to be urged on its behalf, unless it is that it gives military rank to civilians, which civilians might obtain without it. And yet the country retains the corps at vast expense and inconvenience, for fear of getting something worse. This is the real reason of the deadly liveliness of the corps. Better the demon you know than the one you don't know; but it does not say much for the talents of Secretaries of State aided by all the professional knowledge of the Horse Guards and War Office, that they cannot accomplish so simple a matter as the recruiting of the native army with competent officers. Let them give India a staff college and not a staff corps, and they will take a step in the right direction. The Indian service wants re-animation: and a new Addiscombe should provide the stimulus. The existing service is worn out with disappointments and mistakes, and would be much the better for what the Americans call re-cuperation. The Staff corps might be permitted to die out, if there was any prospect of its speedy demise, but there is none. It is an unconscionably long time dying, and appears to rejoice in a perennial spring of grey heads and dismal grievances. We are not so severe as to assert that the Corps finds occupation

for people who would otherwise have none, but there is certainly ample employment for every military officer in the country in disentangling its ravels and correcting its errors, according to military limits in such matters.

COLLEGE DISCIPLINE IN BENGAL.

SOMETHING seems suddenly to have got out of gear in our Government Colleges. A few weeks ago, the students of the Dacca College, with some outsiders, committed an assault within the College upon a Eurasian bandsman. The contagion spread westwards, and the *Behar Herald* contains a lengthy report of a similar outbreak at the Patna College. There, at all events, the occasion and extent of the *fracas* are clearly defined, and the result has been a criminal prosecution ending promptly and satisfactorily in the conviction of the ringleader. His punishment of 50 rupees fine and a month's imprisonment seems to have been richly deserved. The strictures of the magistrate on the state of discipline in the college were very out-spoken, and the Commissioner appointed to investigate the affair will, we hope, go to the bottom of it, and throw some light upon the present most inadequate means for preserving subordination in our schools and colleges. We are informed that a smouldering spirit of lawlessness and contempt for the authority of the tutors has of late years been a normal characteristic in all the State colleges. Outsiders are amused on reading that "the students of the second-year class in the Presidency "College, taking umbrage at some censure administered to "one of their body by a Professor, surrounded him in his "lecture room and barred his exit, till he had with tears "satisfactorily explained away the expressions of re-"proof:" Or again of how Young Bengal, in the persons of, we believe, the same class of the same college, vindicated its manhood by attacking two similarly offending Professors in the college compound, and how it was only by their timely retreat to a palkee-gharry that the demoralized Professors escaped after rough handling with umbrellas and sticks. Truly we manage these things 'well in India,' when the baboo's umbrella takes the place of the dreaded 'tawse' of old times, and it is the teacher that is feruled and the scholar that flogs. Well may the confused and contused Professor remonstrate that the dispute is very one-sided: *ubi tu pulsas, ego vapulo tantum.* These outbreaks are comical enough to read about, and to the district magistrate or superintendent of police, whose relations with the people are those of absolute power to cringing subservience, may seem easily preventible. They seldom occur in schools much less in colleges in England, why should they happen here? At first sight, it would seem that in a country where education depends so largely on State aid, that nothing should be easier than to draw the bonds of discipline tighter than elsewhere. The students are supposed to be constitutionally timid: the Principals and Professors are taken from the same class as those in English schools and colleges; and the State, it might be thought, could surely rule with an exceptionally strong hand, having the power by expulsion of ruining a refractory student's chance of getting an English education at all. It is in the last of these considerations that the real point is touched; and we shall endeavour to show that it is just that which should be the most effectual preservative of subordination in our colleges, that operates most strongly against all discipline. The *Behar Herald*, in commenting on the action of the police at Patna in entering the college class-rooms, holding an investigation therein, and arresting the students, without the least notice to the head of the college, says that discipline *must* suffer where the boys see that the police officer is a greater man than the Principal even within the college itself. A similar case is reported from the Hooghly College, where the conduct of the executive seems to have been strangely discourteous, the police entering the hostel adjoining the college, and arresting a student without one word of explanation to the Principal. But it is not the police alone that is to be blamed, we are assured, for the state of things described. The heads of colleges themselves have more than once been humiliated before their pupils by the direct interference of Government with the routine, if not the very discipline, of the institutions for which they are supposed to be answerable. An example of such interference, and of the instant effect of it was seen in the establishment by Sir George Campbell of the Native Civil Service classes that were tacked on to the colleges, and put under the charge of the College authorities, while at the same time a State routine of study and conditions of admission were imposed, and so unskilfully drawn as to admit of a host of interpretations. In one college, the Principal interpreted the rules one way; the students, who claimed exemption from a certain set of lectures, another. They were ordered to attend the lectures until the matter was decided by the Lieutenant-Governor. But this did not suit the stomach of these young men, who looked upon themselves as specially under the wing of the Bengal Secretariat, and resented the Principal's action as an indignity. They accordingly made an appeal to the Secretary who most unwisely exempted them from attendance. The letter was received by the malcontents during lecture, and was read out by them to the class, who received with jeers the news of the discomfiture of the Principal. Could any course be surer than this to weaken the hands of the authorities? In this very case, the fruits were soon visible. Shortly afterwards, on a boy being turned out of the class-room for misbehaving himself, three classes out of the four in the college refused to attend lectures; formed themselves into a Union for redress of grievances; telegraphed to the Lieutenant-Governor and Director of Public Instruction at Darjeeling that they had been 'insulted'; and required that one of those two dignitaries should come down and avenge them! Every one of them ought to have been at once horsed and fustigated. Who can imagine a VIth form at Eton playing truant for a week, and telegraphing to the Secretary of State to do justice on Dr. Hornby for having "insulted" one of the form by telling him to leave the room? This notion of "appeal," so outraging all just ideas of discipline, comes unfortunately but too naturally to the Bengali youth, breathing an atmosphere of nothing but litigation, and law-court quibbling in his home. Times without number he sees a defendant of spirit and means ensure a final triumph over the first court by an appeal to the next tribunal: and the conceited blockhead comes to look upon every official, and upon his tutors and governors as but links in a chain, the last of which lays hold of the throne at Belvedere. That the fiat of the head of his college is final would seem to Young Bengal an invasion of his just rights. Even the youngest boys in the school find that an "appeal" lies from the lightest punishment by his class-teacher to the Headmaster, and from him again to the Principal of the college. This consequence is that all minor offences go unpunished and almost unreproved. A boy twelve years old is thoroughly impertinent: and, instead of the birch being laid into his bottom, the master does not dare even to box his ears, lest he should be prosecuted in court for assault. What wonder that the masters get tired of reporting misconduct, which is punished by a four annas fine. To model the economy of our schools on the pattern of a cutcherry is not the way to instil into our conceited ill-bred students' ideas of subordination to authority: and even their own friends complain that the system demoralizes them. In the discussion recently carried on in the *Pioneer* between two native gentlemen the one condemning the present system, and the other defending it, the one notices: "among the deplorable results of "the educational department, the seditious tendencies of those "who form the product of its labours are perhaps the most de-"plorable:" And he goes on to quote an article from *Mookerjee's Magazine*, the tone of which is thoroughly seditious. Indeed more than one native paper of this new school seems to breathe against the Government the very spirit of Caliban:—

> "You taught me language and my profit on't is, I know how to curse."

Much of this nonsense is due no doubt to an apeing of independence that ought to have been "taken out of" the boys at school. Washington with his hatchet barking his father's fruit-trees is no inapt type of a newly dubbed B. A. of Calcutta fleshing his maiden pen in the policy of a paternal government. No small portion of this spirit may have its origin traced

to the general atmosphere of insubordination that prevails in our schools and colleges. There are points of difference, we allow, between the relations of teacher to pupil in Indian Colleges and those in similar institutions in England. Caste-laws place a gulf between the Professor and the student in India. Of the exact requirements of these laws the European teacher has but a very imperfect knowledge, and is consequently greatly hampered in his use of means for keeping up discipline. Again the Collegians of Bengal are neither men nor boys. They have not the self-respect that would keep the man from childish disorder and impertinence, while they are often the fathers of families and therefore beyond the birch. Nothing but moral force in the tutor is left, and no doubt this is the great instrument for preserving order in every "seminary of sound learning." But where this moral force has nothing to back it up on emergency, except a petty fine which neither pupil nor parent cares for, to rely on this power to maintain discipline among a mob of native youths is very like trusting in Providence without keeping one's powder dry. Respect for the *Gooroo Mohashoy* is the first principle instilled into the village school-boy ; and is enforced by the quaintest devices of punishment, such as standing on one leg with a brick in the hand, or having to support a stone on the bowed neck. It is only with the study of English that disorder enters the school, to have learnt the mere A B C of which seems to produce insubordination. We treat these nondescript hobbledyhoys with far greater tenderness than is shown to the VIth form of an English Public School, or even to the under-graduates of Oxford or Cambridge ; and to expect them to be amenable to reproof is both unreasonable and unpractical, while it is the worst possible training for the students themselves. Flattered in reports on education and coddled by scholarships, encouraged to regard Professors and Principals as little better than convenient media for the transmission of complaints to higher authorities,—what wonder that valiant young Bengal betakes himself to the amusements of assault and battery, and of spouting sedition in the press. If Sir Richard Temple, as his late resolution sets forth, is bent on "elevating High Education," he cannot begin better than by settling the relations of the European teacher and native student on a more definite and practical basis. We may then hope that such out-breaks as those at Dacca and Patna will be impossible. Personally, we should be glad to see the birch introduced, and used freely without the least regard to remonstrance.

SHOP.

It is only natural that professional ideas and tricks of speech should take the lead in Indian conversation. There is so little else to talk about that a man or woman may be pardoned for speaking Civil Service, Military, or Mercantile a little more persistently than is thought good form in Europe ; still there is a weariness in "shop," unrelieved with liberality of thought or diction that is not the least of the evils of Indian exile. There are very many people in this country who can unfortunately talk nothing but shop, and plenty of it. If they read books, and carry their thoughts out of India in the privacy of their own houses, they are careful to conceal the knowledge they may have gained in this way when in public, and would be rather ashamed to confess that they were well posted on any topic of scientific or political interest exciting attention out of India. If they do not study ; if they are only well versed in the Army and Civil Lists, in the Government Gazette, and the gossip of the locality in which they dwell, they will, nevertheless, be quite in the Indian fashion of these things, and be called "deuced pleasant people" by Captain Scatterbrains of the Hussars, and "socially agreable" by old Codshead of the Civil Service. If, on the contrary, they attempt a higher tone of conversation than this, and talk in India as if they were in London, their station friends will regard them suspiciously as Red Republicans, writers on the Press, or, at the very best, as bores and blue stockings to be avoided as much as possible. It follows, of course, as the consequence of this depreciation of intellectual vigor, that the silliest and stupidest persons in station society are often its leaders. The insane, simpering woman, remarkable for nothing but her dress and her capacity for retailing the smallest of small news, is not unfrequently the most respected lady in the place, and rules the little jungle world together with the rough riding coffee shop haunting, and army-list quoting officer who would be considered as tedious at home as delightful out here. It is a peculiar style of conversation that these autocrats of station *ton* indulge in, and which they recommend to their numerous admirers and imitators : conversation made up of an extraordinary medley of women's dress, dogs, dinners, the Gazette, the latest scandal, the local bigwig, horses, and the obituary of the last mail. The beauty of it is, that it is so easy for idle people to keep the conversational ball a rolling on these topics. The unfortunate horsewoman, whose under garment slipped down on the ride, affords ample material for coffee-shop, dinner, and band-stand conversation for a week at least: and just as one hopes that she and her misguided garment have been worn out and cast aside for something new, she crops up again with fresh additions and adornments of her tale, and is as eagerly discussed as is the prima donna, or the new novel in London life. A mere traveller in India, or a stranger to the land, will wonder what possible interest people can take in so simple an affair as a stringless petticoat, but older Indians know better than this, and are aware that it is an incident of the sort that is a stock piece of station conversation. If it is not this it is shop ; or the Petticoat and Shop turn about like the dreadful drama, followed by the screaming farce of transpontine theatres, stage peices in which there is little or no variety from one year's end to another.

Considering the number of parades, and the many days of cutcherry soldiers and civilians have to attend, it might be supposed that out of uniform or court they would strive to forget the eternal leather. Nevertheless, to hear them talk one would think there was nothing like each man's particular leather, and that the world could not have too much of so good a thing. Everything military from the General's wife to the defects of the Martini Henry rifle, is dwelt upon with a professional gusto that would be amusing if it was not tedious : but to have to listen over a cigar or a glass of wine to two civilians discussing "appeals" or some professional technicality connected with the "Joint" is truly maddening, a sort of conversational rack and thumbscrew only comparable with a discussion on tithes by three parsons and an Anabaptist. It is the same at all times of the day, and at all seasons. The man on the ride,—who represents the famous man in the street, commences a little after gun-fire with the Government Gazette, or some General order on Musketry by Lord Napier, and we hear the whole thing discussed by women as well as men all that day. At *chota hazree* it is still the subject of discourse. The morning caller carries it about with his best suit of clothes and new hat from house to house, and it is talked over at tiffin. Perhaps it is dreamt of afterwards. Young men at the bandstand, desirous of rendering themselves agreeable, resuscitate the conversational scarecrow anew, and he is finally tossed about partially putrid and with scarcely a draggled feather to his back,—at dance or dinner, where we have heard military men commend themselves to their fair partners by explaining the "garrison course" in the intervals of the dance, with the method of making gabions, fascines and trenches between the courses. Perhaps Indian girls see nothing strange in this sort of gallantry, being accustomed to the dearth of anything better. Indian habits are readily and speedily acquired, so that Miss Newcome will soon perceive nothing odd in dissertations on Dhollera, conversation on the Exchange, or such commercial talk as her mercantile suitor in India is likely to suit her with. It is the manner and custom of Anglo-Indians to talk shop, yet it must be strange at first to find conversation all more or less flavoured with gunpowder, foolscap, cotton, or rupees. There are, doubtless, numbers of liberal-minded and well-read people in India, to whom the frivolity of ordinary Indian conversation is distasteful, but they do not say so because they well know that they are in the minority. They hold their tongues if they do not care to speak like their neighbours, whence observers run away with the impression that men are narrow-minded or ignorant when they are only silent. Indian social life and etiquette afford small encouragement to any one to distinguish himself as a Sydney Smith or Samuel Johnson. The first, in India,—unless he held a good appointment and was of a certain rank in the Services—would be voted a most forward and conceited person who required "putting down," and the other would be avoided as too clever by half for the country and the company. An Indian Johnson would hardly find an Indian Boswell, unless Johnson was a Lieutenant-Governor or a General Officer Commanding a Division, when Boswells would not be wanting if required. The fact is, that the grave give way to the gay in India, and most men carry their learning in their heads instead of on their tongues. The proof is seen in the almost total absence of anything like *conversaziones* or scientific meetings in this country. When society gathers here

it is not to discuss a Megalong, or a trans-Thibetian geological phenomenon, but rather the relations between Mrs. Racketts and Lieutenant Harkaway. It prefers "gup" to science, and dancing to deductions. It would be impossible for the *conversazione* of Parisian or Roman salons to flourish here. People would not assemble to eat ices and drink coffee and to talk nothing but Art and Science by the hour. They would resent anything so intolerably musty and slow, and would much prefer a discussion of the merits of the local Bobbery pack, or of the contents of the last Europe box, Mrs. Faddles had out from London. Art in Anglo-India is at a discount, and as for science, unless it can be brought into the great race for appointments, Society declines to recognise it. Nevertheless, there are few countries in the world wherein men read more, or more diversely, than in India. The opportunity for the acquirement of a varied store of knowledge is ready to hand. Nearly every Indian station is provided with a good public library, and leisure is not wanting for those who care to study. We have known a man who had read almost every volume in a station library that contained several thousands of fiction, travel, biography, and poetry, and complained at the end of the torpidity of the Committee, in keeping him waiting for more books, per mail, but it is one thing to acquire information of this kind in India and another to apply it:—in fact, the application is not easy. A good acquaintance with one professional "shop," or one with a bigwig, or a capacity for sitting a buck jumper, or breeding toy terriers, or singing a sentimental song, or taking away from, or adding to a reputation, will, one or all, do a man more service in Indian society than all the learning in the world, however much the last might be valued in more appreciative countries.

GOD: AND THE PHILOSOPHERS.

A MODERN sceptic tells us that Nature "acts with fearful uniformity; stern as fate, absolute as tyranny, merciless as "death: too vast to praise, too inexorable to propitiate, it has no "ear for prayer, no heart for sympathy, no arm to save." The haunting dread of the old philosophic world is true; and we are nothing better than insignificant and unheeded atoms swept hither and thither in the mighty eddies of an unseen, impersonal, mysterious agency destined hereafter to be "sealed amid the iron hills, or "to be imprisoned in the viewless winds, and blown with reckless "violence about the pendent world."

Now, assuming that there is *some* doubt about this theory of the Universe, it will be admitted that however otherwise competent to assist in the enquiry as to whether it is true, the man who can *desire* it to be so is disqualified from taking any part therein. The man who can really desire that such a theory of the world should be true is plainly disqualified, we say, from taking any useful part therein. For such a mind is certainly disordered, whether we are able to put our finger upon the precise disease that afflicts it or not. And yet we find an almost passionate desire on the part of some of the leaders of this school to persuade us that this is the only true theory of the world. It is not true to say that it is necessary to approach an enquiry of this order with minds indifferent to the result, and prepared to accept one conclusion with as much readiness as another. For the assumption ignores all that part of the natural order of things that consists in the affections of the human mind. We suggested a few weeks ago that the materialistic tendencies of the modern scientific school had been assisted in their development by the neglect into which metaphysical studies have fallen, under the influence of the positive philosophy. What we mean is—that while modern scientific writers are pressing the conclusion upon us, that they have found out the secret of the universe, they seem unconcious of two gigantic assumptions on which their speculations rest: they ignore, as though it were unreal, the existence of a vast domain in the field they are pleased to call the Universe; and they assume that the condition of things in which we find ourselves, and of which the only cognizance we have is that obtained through the medium of our feeble senses, really exhausts the infinite. Thus Professor Draper in his *History of the Conflict between Science and Religion*, which the Westminister Reviewers speak of "as this most valuable and outspoken treatise" tells us that—"It is enough for ourselves to know that though there is a "Supreme Power: there is no Supreme Being. There is an invisible "principle but not a personal God, to whom it would be not so much "blasphemy as absurdity to impute the form, the sentiments, the "passions of men. All revelation is necessarily a mere fiction. "There is no such thing as Providence, for nature proceeds under "irresistible laws, and in this respect the Universe is only a vast "automatic engine. The vital force which pervades the world is "what the illiterate call God."

The assumptions that underlie such confident and immodest writings are simply gigantic; for, looked at carefully, they plainly involve a challenge to us to allow that these men themselves are God. For when they speak of the Universe they claim to have scanned all heights, measured all depths, and to hold the eternities and the immensities in their grasp. And they then come boldly back and tell us "There is no God." The fault is not confined to Mr. Draper: it marks the whole school. In confining their researches to what they believe to be 'knowable,' they have glided into the assumption that the Universe is necessarily bounded by the perceptions of men, and the deductions of our reasoning powers therefrom. Our wonder is how the Professor has come to know anything about "the Universe." Mathematicians tell us of the possibility of a space of *four* dimensions dawning upon them; and, for anything we know to the contrary, the Universe may embrace world-systems so different from that in which we exist as to bear no resemblance to it at all, and to be inconceivable by creatures with such limited powers as ours. It is only reasonable to suppose that it *is* so, while there is not a writer of this school that does not assume that the system in which man dwells exhausts the unseen. We say truly that there is a breadth of conception concerning the unseen in the minds of reverent and believing men, that puts to shame the confident dogmatism of the school that has risen up to deny the being and Providence of God, in the name of Reason.

But in addition to the gigantic character of this assumption there is one nearer home that again marks the whole school. You will find that narrow as their Universe already is they put out of it altogether, as having no place therein, all the emotions and affections, the yearnings and longings, the hopes and desires of the mind. They treat them as non-existing. In the Universe of these writers there is no place for any mental phenomena that are not connected with the reasoning faculty. And yet the perception that two and two make four is not more true, more real, more a fact, than those other movements of the mind which a universal instinct tells us are connected with its highest aspects. The love of the true, the yearning after communion with a personal God, are as much parts of our Universe as oxygen gas or Professor Draper's book. The exclusion of these phenomena therefrom and the repudiation of all study of them as metaphysical does not get rid of them. They are still there: you may treat them as though they were not, but so much the worse for you. The thoughtful observer of the present state of opinion on this subject cannot but be deeply offended at the immodest, indeed outrageous assumptions, on which the scientific school dismisses the religious sentiment in our nature from the controversy. The school has no true conception of the attitude of devout and well-informed minds towards these great controversies. If any of our readers in perplexity, or distress, on this great subject, will look carefully at the narrow grounds and enormous assumptions on which the conclusions of these men rest, when they deny the existence and personality of God, they will cease to care very much for their speculations in religious matters. They have no business with religion at all. They are doing excellent and welcome service in their researches into the physical conditions and relations of things; but they should cease to talk about a Universe that is no Universe at all, and that is lamed on one side, even in its own narrow bounds, by the total exclusion therefrom of all moral facts. When you have exhausted the investigation of the physical part of your Universe you have still the more important part thereof to deal with; the very existence of which you ignore. "Nature's last work" is something more than the Professor Huxley school deal with; and it is only by ignoring one half the phenomena that present themselves for investigation—on the notable ground that they are *unknowable*, that the philosophic system is built up at all.

CARLYLE'S LATEST HEROES. *

EVER on search for the record of heroic work, for the recital of the deeds of men who have helped with pen, or tongue, or sword, to transform disorder into order, anarchy into submission to the rule of the wise and strong, "chaos into cosmos," Mr. Carlyle has been overhauling a history of Denmark, first published some thirty years ago by "accurate, learned, and unwearied Dahlmenn, the German Professor," and has found therein the story of the early Norway kings derived in most part by Dahlmann from a

* The Early Kings of Norway. By Thomas Carlyle. London: Chapman and Hall.

history of the Norse Kings, by Snowe Sturleson, a thirteenth century chronicler. Sturleson had himself built up his chronicle from a collection of narratives, known as the Icelandic Sagas, or Says. The Icelanders, it seems, in their long winter spent much of their time in writing. Their parchments are still in existence, and testify by their beautifully formed letters that their winter work was pursued with a loving patience. Mr. Carlyle, finding that these early Norway records throw much light upon English contemporaneous events, and that they also reveal with what rough heroic vigour the transition from Paganism to Christianity was helped on by the northern kings, has put together, with a picturesqueness and vigour of style all his own notes jotted down during his perusal of Dahlmann, and which he has rightly deemed would be of interest to English readers.

The first king over the whole of Norway was Harold Haarfage, or Harold the Fairhaired. Before his time the land was ruled by numerous jarls. Each jarl was a little king. He ruled over a small territory, which had a sort of parliament—Folk thing it was called—in which the public wants were talked about. There were often unhappy quarrels between the kinglets, and much confusion and bloodshed. Harold the Fairhaired put an end to this state of things about the year 860, and rendered service to his country by uniting it under one head and making a kingdom of it. He recognised, or rather Mr. Carlyle makes him recognise, his country's anarchy as the worst kind of savagery, and did what in him lay to diminish it by conquest and afterwards by wise government of the conquered. But there was another motive prompting him to carry on his fighting to a successful issue. This was love for a beautiful lady, Gyda by name, who, when he sought her in marriage, bade him do as Egbert of England had done, subdue into peace the contentious jarls around him, and become a king; and then she might think of his offer, but not till then. This resolve of the proud lady increased Harold's desire to call her his own tenfold. He made a strange vow. Until he had achieved what was bidden of him he would neither cut nor comb his hair. Year after year he engaged in fierce battle with the jarls, subduing them one after another, and at the end of twelve years had finished the work he had put his hands to so resolutely. He then had his wild profusion of unkempt hair clipt off, and when it had grown again to luxuriant beauty all Norwegians knew as their King and Queen Harold the Fairhaired and Gyda the beautiful.

But though Mr. Carlyle recognises Harold as a man of naturally royal nature, and sees much to admire in the long series of his successors, he reserves for two of their number the enthusiastic devotion bestowed by him on the few who do the most heroic work in the world. Olaf Tryggveson and Saint Olaf are the two heroes of his book. The first Olaf was born at the close of the tenth century. His father, who was a sort of under-king and near relative of Hakon the Good, was treacherously slain three months before Olaf was born. His mother had to flee for her life. She concealed herself in the islands, and made her way through trackless forests, and afterwards with her child to Sweden and thence to Russia. They were here seized and sold to slavery. The boy Olaf at last fell in with a kinsman in the Russian service, who redeemed him from slavery and when he had grown to manhood he left Russia. He became a sea-robber or Viking; and in that career achieved much doubtful honour around the coast of Britain. In one of his expeditions, after marauding among the Hebrides and off the coast of Wales, he rested for a while at the Scilly Isles. A famous Christian hermit was then living on one of the islands. Tryggveson heard of him, sought him out, had much talk with him, and was induced to receive Christian baptism from him; but did not quit his roving and pillaging life all at once. Soon after, A. D. 994, he joined with the King of Denmark, Sweine of the double beard, the father of Knut, in an invasion of England. They steered up the Thames with 300 ships and many bold followers, and began a furious siege of London, but being unsuccessful retreated, and overran and plundered Kent, Hampshire, and Essex. It was while with these invading Danes that Tryggveson met with Elphegus, bishop of Winchester, afterwards Archbishop of Canterbury. The bishop, a man of great piety and discernment, made a deep impression upon our hero, and introduced him into the depths of the Christian faith. He baptised Olaf anew, in presence of Ethelred, and Olaf solemnly promised he would never plunder in England any more. He married an English princess, and kept his promise. For more than twenty years Norway had been governed by one man. He had not the title of king, but ruled under the patronage of the king of Denmark, and was known as Hakon Jarl. He did his ruling in a strong-handed fashion, was a zealous heathen, yet tolerant towards Christianity. But as he grew older his heathenism developed into dissoluteness, and he encouraged himself in the habit of appropriating other men's wives. At last, his attempt to carry off one Gudoun, the wife of a peasant proprietor, who was so fair that she was known as "the Sunbeam of the Grove," roused the whole country into hostilty. Just at this time, Tryggveson appeared in Norway, and was welcomed by the peoples as their leader. The story of Hakon's death is told in Mr. Carlyle' characteristic fashion.

"Hakon finds he cannot fly under cover too soon. With a single slave he flies that same night, but whitherward? Can think of no safe place, except to some old mistress of his, who lives retired in the neighbourhood, and has some pity or regard for the wicked old Hakon. Old mistress does receive him, pities him, will do all she can to protect and hide him . . . She, by the slave's help, extemporises a cellar under the floor of her pig house: sticks Hakon and slave into that: Hakon and slave begrunted by the pigs above them, tortured by the devils within and about them, passed two days in circumstances more and more horrible. For they heard, through their light slit and breathing slit, the triumph of Tryggveson proclaiming itself by Tryggveson's own lips, who had mounted a big boulder near by and was victoriously speaking to the people, winding up with a promise of honours and rewards to whoever should bring him wicked old Hakon's head. Wretched Hakon, justly suspecting his slave, tried to at least to keep himself awake and the slave did keep himself awake till Hakon dozed or slept, then swiftly cut off Hakon's head, and plunged out with it to the presence of Tryggveson. Tryggveson, detesting the traitor, useful as the treachery was, cut off the slave's head too, had it hung up along with Hakon's on the pinnacle of the gallows, where the populace pelted both heads with stones and many curses, especially the more important of the two."

And thus our hero Tryggveson became King of Norway. He was full of wit and pleasantry, and had a fine ringing laugh, and a ready command of speech. He put down a great deal of miscellaneous anarchy by soft persuasive methods. Whenever these failed, he brought to the front his hard and terrible methods. He resolved to do his utmost to put down Norway's heathenism. This involved devil-worship and some detestable rites, in dealing with which he showed no mercy. The people began to murmur at his zeal for the Christian faith. He met a large gathering of them at one Yule-tide feast. In a tone of solemn mockery, he announced his intention of acting as a heathen again, and of doing sacrifice. He intended to do it too in the highest form, that of human sacrifice, and not of slaves and malefactors, but of the best men in the country. As he spoke, his own armed followers seized eleven of the principal men present; and with very little more ado the eleven and all the company gave unanimous consent to baptism. They at once received it, and abjured their idols; but were not permitted to go home till they left their sons as hostages in the king's hands. In this way King Olaf went all through Norway with what Mr. Carlyle calls "a rough harrow of conversion." But this rude, upturning process was always followed by the teaching of missionaries from England, bishops, priests and preachers, who went from place to place reconciling to the Christian rule of life those who had been hastily driven into the Christian fold by peremptory royal command. When Norway had thus been initiated into Christian ways, the king tried to effect the conversion of Iceland. Though the bards opposed with lampoon and satire, he at length with the aid of a priest, Thormod, a pious, patient, and kindly man induced the Thing or Parliament of Iceland to accept Christianity by open vote. The roar of a volcanic eruption on the very day of the voting was taken as a supernatural approval of the change of national creed.

But many of the Norwegians did not give up their old heathenism without a struggle. At one Thing in Hordaland far up in the north, there were assembled many obstinate worshippers of Thor and Woden. The king introduced to them the question of Christianity, and urged that the old gods should be given up. But opposition was plainly and loudly expressed by one sturdy chief, by name Ironbeard. He said that if the king insisted on a change, he and his followers were ready to fight. Olaf vouchsafed no word in reply, but signalled to his own trusty armed men, who rushed to the temple hard by and broke down all the idols. In the confusion which followed, the old Ironbeard was slain. This grieved the king very much. And at another Thing, summoned a little later, he expressed his regret, but still urged conversion. He would conciliate the heathen folk, he thought, by himself offering to marry the fair daughter of Ironbeard, for he was now a widower, if only they would all accept baptism. This was agreed to. But the bride had resolved to avenge the death of her father and the destruction of her gods; and on the wedding night Olaf closed his eyes but not in sleep. Suddenly opening them, he saw the gleam

of bright steel and his bride with a long knife about to strike at him. He arrested what might have been his deathblow, dismissed his bride to her kinsfolk and saw her no more.

He was happier in his next choice for she was loving as well as fair, yet she urged him to an expedition which resulted in disaster and death. The Princess Thyri, whom he now married, was the sister of Sweine of the double-beard, who had married Sigrid, the dowager queen of Sweden. Sigrid had once been sought in marriage by Olaf himself. At an interview he had insisted upon baptism and renunciation of idol gods. "They are the gods of all my forefathers," urged the lady. "Choose what gods thou pleasest, but leave me mine." Olaf's anger was aroused and he said to the dowager at last.—"Why should I care about thee then, old faded heathen creature?" And as he made an impatient gesture, the glove in his hand switched the lady's face. She in her rage said that her day of revenge would be sure to come. And so it did. Her marriage with Sweine did not make her forget her resolve. She urged upon her husband, and upon her son the king of Sweden, and upon Jarl Eric, son of the Hakon, the troubler of Norway whom Olaf had supplanted, to surprise and attack him in the Baltic, as he returned from the expedition on which he had been sent by his young wife. The treachery of one in whom he had confided rendered all ineffectual. Yet he and his men fought on to the last. When he had scarcely a man left he sprang overboard, and was seen no more.

Mr. Carlyle's admiration for this famous old hero, whose renown over all the Norse world was unrivalled, is unbounded. His own words may here be given: "A magnificent, far-shining man; more expert in all 'bodily exercise' as the Norse called them, than any man had ever been before him, or after was; could keep five daggers in the air, always catching the proper fifth by its handle and sending it aloft again; could shoot supremely, throw a javelin with either hand; and, in fact, in battle usually threw two together. These with swimming, climbing, leaping, were the then admirable Fine Arts of the North; in all which Tryggveson appears to have been the Raphael and the Michael Angelo at once. Essentially definable too, if we look well into him, as a wild bit of real heroism, in such rude guise and environment, a high, true, and great human soul. A jovial burst of laughter in him too; a bright, airy, wise way of speech; dressed beautifully and with care; a man admired and loved exceedingly by those he liked; dreaded as death by those he did not like. 'Hardly any King' says Snowe, 'was ever so well obeyed; by one class out of zeal and love, by the rest out, of dread. . . . . Strangely he remains still a shining figure to us; the wildly beautifullest man, in body and in soul, that one has ever heard of in the North."

Mr. Carlyle's other great hero is also named Olaf. His father Harold Graenske, kinglet in a remote part of Norway, was a great grandson of one of the sons of Harold the Fairhaired. Like the other Olaf's father, he died before his son's birth. His mother married another kinglet, Sigurd Syr, also a descendant of Harold the Fairhaired. Sigurd became very fond of his step-son and had him trained by a special tutor known as Rane the Far-travelled. His mother instilled into his mind ambitious ideas. Once his foster-father bade him saddle his horse for him. Olaf went out with the saddle, chose the biggest he-goat he could find, saddled it and brought it to the door. Sigurd discerned that the boy was of too high a humour to take commands from him, and was scarcely vexed to find him so. Olaf had his days of roving as Viking. His principal exploits were in England, where he fought on the side of Ethelred. In England he seems to have acquired the deeply religious feeling and intense adherence to the Christian faith, for which he was afterwards distinguished. He was known in those early days of his as Olaf the Thichset. It was in 1015 that he resolved to give up his roving life, return to Norway, and assert his rights to kingship there. As soon as he landed he called a Thing together, and unfolded his claims. They were at once assented to. A little dexterous manœuvring soon quelled whatever opposition reared itself up, and he became King Olaf. During his reign he finished the work of conversion of the nation to Christianity, begun by his namesake. Some of his methods were rougher than even those of the other Olaf. But after him heathenism was not able to assert itself again and died quite out. All testimony represents him as a highly devout and pious man, and a most righteous king. He was ever watchful, just, and vigorous in the administration of the laws, in his repression of robbery, punishment of injustice, and dealings with all evil-doers upon whom he could lay hands. He reigned altogether about fifteen years. His reign closed in disaster, however, and Norway was invaded by Knut from England, whose gold corrupted many of the chiefs of the kingdom, who joined his army. Olaf secured a naval victory, but on land found he was losing influence. He retreated into Sweden, and thence to Russia. He watched his opportunity for returning, and one seemed to present itself. His march back to Norway is described by Snowe Sturleson with pathetic grandeur. The battle of Stickelsead which ensued was a fatal one for him. He was slain on the battle-field, and his body was carried, after dark, to a farm-house near. The story is that a poor blind beggar, who crept for shelter where the body was lying was miraculously restored to sight. With wonderful rapidity the feelings of all Norway for their King underwent a transformation. The revolt against him was bitterly repented of. He became, and is known to this day to every Norwegian as Saint Olaf; and says Mr. Carlyle, "I have seldom met with better stuff to make a Saint of, or a true World-Hero in all good senses."

Interwoven with Mr. Carlyle's rendering of the stories of the various kings is a thread of occasional comment. There is also appended as an epilogue a brief but forcible chapter, the burden of which is the thought that an eternal Providence guides the course of human events, and that the old northern kings, clothed as they were in stormy passions and instincts, and unconscious it may be of any aim but their own satisfaction, were really working out the designs of a Divine Ruler, in bringing about "the blessed beginning of human order, regulation, and real government." The men who leave their mark on the world are for the most part the men who are possessed with some one great idea. Carlyle is so possessed. His foremost idea he steadily unfolds in almost every book he writes with other ideas in due and picturesque subordination. Submission to the rule of might allied with right: endless trouble in solving the question "who is the best man?"—earnest endeavour to help on the transformation of disorder into order, of wretchedness into contentment, of ugliness into beauty:—this is the one great thought variously rendered, running through all his books. He has of late years been aided in his aims by one other, Mr. Ruskin, who without losing his own individuality has assimilated much of his own thought to that of the vigorous old prophet of Chelsea, and has even in his writings caught a trick or two of his style Mr. Carlyle in his Epilogue recognises Mr. Ruskin as a fellow-worker along the same track, and quotes from what he calls his "strange piercing winged words."

TENNYSON'S QUEEN MARY.

THERE is a school of thinkers, of which Carlyle may be mentioned as a representative, which believes that real genius is by nature universal. The true hero, according to Carlyle, is fitted by nature to excel in any capacity. His original endowment of transcendent faculty has not in itself a special bent; it is a peculiar training and special circumstances that give it a special development, so that the hero appears before the world sometimes as king, sometimes as priest, sometimes as poet, and so on. All this may be perfectly true, but its truth or falsity is undiscoverable, for we cannot recognise a hero until his special development has taken place, and his faculty has proved itself by some special achievement. What we do know is that very few even among men of acknowledged genius retain this possibility of universal excellence, if they ever possessed it, after they have undergone a special training and development. The sphere in which most men are fitted to shine is narrowly circumscribed, and when a man has attained excellence in some one province it is generally a mistake, involving a waste of time and power and resulting in comparative failure, to forsake that province for one hitherto untried, especially if the effort is made at an advanced period of life. We are never weary of expressing our admiration of Tennyson as a reflective poet; his powers of narrative and description are of a very high order; and many of his lyrics are exquisite, but when we learned that he was about to demand the verdict of the world on his powers as a dramatist we felt a strong misgiving as to the result. His long confirmed habits of thinking and writing did not seem to justify the hope that he could write a successful drama. His former poems afforded scarcely a hint of dramatic power. He has written pretty and pleasant conversations, eloquent speeches, and noble soliloquies, but the reader could never forget that he was seeing the persons through the eyes of the poet. The characters did not manifest themselves, but Tennyson himself with his well-known voice and gesture was always recognizable as their spokesman and interpreter. Even the splendid soliloquy of Lucretius never deceives us as to who is the real speaker. The poet has skilfully adapted to the form of his own mind, the Lucretian philosophy and imagery, and wears them with noble and natural ease. To an uncritical eye it might seem that the grand old

Roman sceptic had himself been revivified, but a keener inspection discloses the fact that merely a choice selection has been made from his wardrobe and that the living wearer is our own Tennyson.

We do not pretend to say whether or not Tennyson was endowed by nature with the capacity to become a great dramatist, but not only had he never, before the publication of "Queen Mary," given any unmistakeable evidence of dramatic power, but we may add that the whole course of his life has been unfavourable to the development of such a power even granting that it lay among his natural endowments. It has been his delight to live sequestered from the din and tumult, the battle and toil of public life, in an element of tranquil study and reflection, drinking in sweetness and beauty from nature, books, and friendly faces, and feeling no monotony that could not be relieved by the gentlest of social and family excitements. He will not emerge from his self-imposed seclusion even to deliver a speech of a semi-public character. Few men, perhaps, are more familiar with the knowledge, and thought, with the mental wealth, of this age, but few, on the other hand, have stood more resolutely aloof from the roaring, impetuous tide of life with all its burden of sins and sufferings and high endeavours, of battles, shipwrecks, and glorious victories. We cannot blame his choice; nay, perhaps it is in these days for those who can win it, the choice of wisdom. But it is a choice which utterly disallows the free full growth of dramatic powers. These spring up and grow to grandeur, and blossom into beauty, out of the still deep heart of the poet it is true, but in the very vortex of the wide world's whirling restlessness. Thus it is that, while it is easier to be a dramatist than to be a poet, it is far easier to be a poet—and a great one, than to be a great poet-dramatist. Scott could not with accuracy be called a great poet, but he is, next to Shakespeare, our greatest dramatic writer. Byron was infinitely above Scott as a poet, but though he wrote dramas he was singularly destitute of dramatic power. He did not seclude himself from the world in the manner of Tennyson, but in his own way he did so even more completely. His own individuality was so intense that it could never forget itself in that of another, and his keen eye merely glanced from the surface of the characters among which he mingled to brood upon himself. Wordsworth was perhaps a truer poet than Byron, but he, like Tennyson, lived too remote from the world's activities to feel the dramatic fire that lives and glows only by friction.

We have been a little too prolix in our introduction, but it was impossible to judge truly of the merit or demerit of Tennyson's drama without reflecting on the stupendous task which in his advanced years he has attempted, and his apparent unfitness to achieve success. Our readers will not be surprised if we now record our opinion that "Queen Mary" is a beautifully elaborated product of careful study and highly cultivated literary skill, a profoundly interesting and intelligent picture of the unfortunate queen and her tragic reign, has some fine poetic touches, and a few striking photographs, but that mixed with these there are not wanting blemishes and defects, and that while the dramatic form is nearly all that could be desired, and even the action is so well sustained that the reader's interest slowly deepens to intensity at the close, it is impossible not to feel in the course of reading and still more when the book has been closed that something essential is wanting throughout. The dramatic illusion has not been attained. The characters have been carefully studied and the separate studies have been put together into a beautiful whole with excellent art, but the whole is manifestly rather a product of art and patient labour than a free natural growth of genius. The persons of the drama have all been made from without, and have not grown from within; they are excellent imitations, a beautiful gallery of artistic shapes almost rivalling nature in exquisite workmanship, but the words they seem to utter are really spoken for them by an invisible ventriloquist and a careful listener cannot fail to detect the accents of Tennyson. Yet the drama will richly repay study, and is, in one sense more interesting to a patient reader from its very defect. It is a splended monument of what can be accomplished in a sphere foreign to a man's peculiar genius by "the infinite faculty of taking pains."

The frame-work of the drama is well constructed. Each act has a completeness of its own, and really marks off a stage in the development of events, while each grows most naturally out of the preceding. The first leads up to the Spanish marriage, the second represents the rebellion arising thereupon, and that being quelled and due vengeance taken, the third—which is the longest and perhaps least satisfactory—is occupied with absolution and persecution—the Papal legate absolves the nation, popery is triumphant and heretics burn. The fourth act—which is far more interesting though we doubt if it is fitted for the stage—exhibits the repentance and martyrdom of Cramner, and the fifth, carries us from the blazing fagot-fires to the black shadows of defeat, despair and death, behind which rises the star of Elizabeth.

It is impossible not to see the art that has been exercised in the opening scenes for the purpose of bringing on the stage and calling attention to the leading personages and the great *nodi* of the play. Mary and Elizabeth—the unlovely queen whom the nation's love of justice has enthroned, and her fairer, more politic, and more popular sister, to whom the heart of the people leans—pass in procession through crowded Aldgate while the citizens and gentlemen assembled, discuss from popular points of view the personages and problems of the time. The question of the queen's legitimacy is jocularly touched upon by the illiterate crowd, and a few expressions are made to suggest the advent of popery and the fiery stake. Then two gentlemen discuss the dreaded prospect of the Spanish match, and show us why the poet has thus introduced the two sisters in juxtaposition. Elizabeth plays no prominent part in the drama, but in spite of her greater attractiveness has been kept by the poet in exactly the position she seems in real history to have occupied. She is generally invisible, sometimes we get a peep of her in seclusion, and see enough, as the nation saw enough, to point a strong contrast between her and Mary. While Mary's baleful light is supreme, an occasional glimpse of Elizabeth's clear star on the horizon attracts the longing eye. As the one rises to the zenith in blood and smoke, the clear cool light of the other seems about to sink in untimely clouds, but when the former begins to stagger darkly towards its dismal setting, the latter rises in clearer effulgence till at last the lurid light and the vapour of smoke are swept away, and the star of a new morning for England and Protestantism rises in the person of Queen Elizabeth. These citizens and gentlemen are thus made to serve a useful purpose in the opening scene, but we must admit that the purpose for which they appear is far too evident. We do not believe that they are real characters but simply voices, introduced to call attention to the germs of events that the drama is to unfold. They in fact, supply the place of a prologue. Their appearance here reminds us of the cobbler and his fellow citizens in the opening scene of "Julius Cæsar," but what is mechanism in Tennyson is real, live and lusty flesh and blood in Shakespeare. The same criticism is applicable to all the minor characters in "Queen Mary." If at first sight *Joan* and *Tib* in the fourth act seem to be exceptions, it is owing entirely to their dialect and rusticity They are too purely generic; each might be either, and either might be any old woman of their class.

The curtain next rises upon Cranmer. He embodies the vacillating religious spirit of the English reformation—a strange mixture of meanness and nobleness, of the strength that lies in truth and the pusillanimity of an imperfect loyalty to truth—while Elizabeth embodies its political spirit, flexible and compromising within certain limits, but true in instinct, bold in resolution, and unswerving in its main purpose. As the shadows of Mary's character show blacker by contrast with Elizabeth so do the weak lines in the face of Cranmer seem more strikingly irresolute. Tennyson's Cranmer is perhaps the principal male character in the drama, and is one of the most skilfully drawn, though least fitted for stage representation. This is a misfortune in a play that has been written for the stage, but it is difficult to see how Cranmer could have been represented otherwise, and the character is an interesting one for the student. The brief soliloquy with which the scene opens though little more than a list of names is, for dramatic purposes, one of the most skilful passages in the play, and fills the imagination in a moment with a vivid picture of what was going on all over England at the time—the almost universal flight of the Protestant leaders to places of refuge on the continent. Cranmer's resolution to remain, come what might, is thus made to show powerfully in his favour, while the fatal weakness in his character is not concealed. His own consciousness of weakness is admirably revealed by his exclamation when he is summoned to the Tower. "I thank my God it is too late to fly." The peculiar character of his mind is well portrayed—a mind singularly open to conviction by the truth, and full of the purest and noblest impulses, yet weak in resolution and pliable in stronger hands, and when daring to act on conviction against imperious opposition, apologising for such action rather than defending it. When Peter Martyr urges him to fly, and enumerates his acts, which will now be held criminal, his answer is in each case substantially an apology. Truth, authority, obedience, or example, had been too strong for him. He had signed the Letters Patent giving the Crown to Lady Jane Grey because—

"The wan boy-king, with his fast fading eyes
Fixt hard on mine, his frail transparent hand,
Damp with the sweat of death, and griping mine,
Whispered me, if I loved him, not to yield
His Church of England to the Papal wolf
And Mary; then I could no more—I signed."

In spite of weakness he feels that he must remain firm on the doctrine of the Eucharist.

"Step after step,
Thro' many voices, crying right and left
Have I climbed back into the primal church,
And stand within the porch, and Christ with me;
My flight were such a scandal to the faith
The downfall of so many simple souls,
I dare not leave my post."

But he had brought about the divorce of Queen Catharine, and he answers;

"I cannot help it.
The Canonists and Schoolmen were with me."

The apologetic tone of his defensive statements, half resolute, and half despairing, and his thanking God that it was "too late to fly," are skilful touches of the poet's art, and prepare the mind for his subsequent recantation. Evidently he recanted for the same reason as he had habitually acted—he could not help it. How far a man is morally responsible for constitutional irresolution, and consequent acts, we leave casuists to decide, but one thing is clear as regards Tennyson's Cranmer—that so far as his natural irresolution palliates his recantation, in the same proportion it detracts from the praise due to his great actions.

Cranmer in prison and at the stake fills the fourth act, but little additional light is thrown on his character though the lines are more distinctly brought out. The delineation is profoundly interesting as a study, but the speeches are not suitable for declamation, and do not gain, as dramatic speeches should, by being read aloud. His vision of King Henry looking from a cloud and bidding him have courage, which a reviewer has taken for a subtle sarcasm on his character, is not so meant by the poet, and is the one really incongruous thing that he has here introduced. His prayer and speech before he is led to the stake is a beautiful piece of rhetoric, calm and subdued in tone, elevated and sweet in feeling and expression, but is indebted for sublimity rather to the circumstances than to anything in itself. We shall quote merely the conclusion.

"And now I come to that great cause that weighs
Upon my conscience more than anything
Or said or done in all my life by me;
For there be writings I have set abroad
Against the truth I knew within my heart,
Written for fear of death, to save my life,
If that might be; the papers by my hand
Sign'd since my degradation—by this hand
[Holding out his right hand.
Written and sign'd—I here renounce them all;
And, since my hand offended having written
Against my heart, my hand shall first be burnt,
So I may come to the fire."

Opposing shouts from Papist and Protestant interrupt him, and Lord Williams of Thame reminds him that he has already recanted all he wrote about the sacrament, and bids him not dissemble but "play the plain Christian man." And he answers:"

"Alas my Lord,
I have been a man loved plainness all my life;
I *did* dissemble, but the hour has come
For utter truth and plainness; wherefore I say,
I hold by all I wrote within that book.
Moreover,
As for the Pope I count him Antichrist,
With all his devil's doctrine; and refuse,
Reject him, and abhor him. I have said."

His courage has been perfectly serene from the moment he saw that his fate no longer depended on his own resolution. His destiny has been taken out of his own hands and he now goes smiling to the stake.

A great deal of skill is displayed in the metre. It wants the fire and strength requisite in dramatic poetry, but the deficiency is not properly in the metre itself which is admirably fitted to the thought and feeling. The imperfect lines as in the foregoing extract are skilfully used. The pause, and the commencing of these declarations with a new line, give them emphasis and completeness.

We reserve our comments on Mary herself, and a few other remarks for a concluding notice.

WITH THE GERMAN PILGRIMS IN FRANCE.

LOURDES, SEPTEMBER 11TH, 1875.

THE German Catholic pilgrimage to the sacred shrines of France, in spite of the various strong assertions which were repeated up to the last moment as to its not being carried out, may really be numbered among the accomplished facts of history. On Tuesday evening I read at Paris in the *Daily News* of the same morning a telegram announcing the entire abandonment of the pilgrimage. Half an hour afterwards I saw the very pilgrims themselves at the Church of Notre Dame des Victoires. This Church is the usual rendezvous of pilgrims in Paris. One of the streets leading up to it is the Rue des Petits Peres. The original name of the Church itself was L'Eglise des Petits Peres. The priests of the Church became, however, in course of time such favourites with the fashionable ladies of Paris, and the term "Little Fathers" was so often on ladies' lips, that it was deemed prudent to change the name which sounded so much like a term of endearment to the present one. One of the altars of the Church is especially dedicated to Our Lady of Victoires. The walls in its immediate neighbourhood are covered with votive offerings. Here and there one's eye lights upon a tablet with an English inscription, but the French workman has in each case carved an error into the durable marble. The English apostrophe as a sign of the genitive is especially unintelligible to the carver, and is generally turned into an accent, so that a Madras gentleman is made to thank his heavenly mother for his "wife's restoration to health."

At this Church Count de Stolberg, the leader of the German pilgrims, presented an ex-voto offering richly wrought in gold, and his sister a bouquet of flowers, and then all the pilgrims listened to a few well-chosen words of welcome from the officiating priest. He said he could not refrain from asking for God's blessing upon those whose love for the Holy Catholic Church had sent them on so long a pilgrimage from their own homes. The benediction service was then sung, and the pilgrims left the Church to make their way to the railway station, to set out on their midnight journey through Orleans to Issoudun.

The pilgrims are ninety in number; the larger proportion of them are priests and peasants from Saxony. The pots and cans they have with them testify to their resolve to take back from Lourdes some of its sacred water. Middle-class society is not very largely represented, but there are nearly thirty connected with titled families. The aristocratic companions of the Count of Stolberg, the leader of the pilgrim band, include counts and countesses, barons and baronesses.

Issoudun is a picturesque town in the department of Indre. It has a ruined castle built in the days of Cœur-de-Lion, an ancient Church, and streets lined with trees. It is rapidly acquiring fame, but not for its picturesqueness. The missionary priests who have established themselves there know the potency of a name. Notre Dame has ever been a name of power. The visions vouchsafed to the hysterical nun Marguerite Marié Alreacoque at Paray le-Monial have given to the name Sacre-Cœur a magic influence The missionary fathers have in their wisdom combined both names in the title of their church. No visions, no miracles, no sudden upspringing of healing waters had made Issoudun sacred ground, but the priests bethought themselves that Notre Dame was during the early years of the Holy Child the guardian of the Sacre Cœur, and so they chose the Notre Dame du Sacre Cœur as the name of the church they set themselves to raise. They thus united the old magic of the name Notre Dame with the newer magic of Sacre Cœur, and in the union evolved the new and subtle magic residing in the thought of the guardianship of the Sacre Cœur by Notre Dame. At Issoudun they have gradually created a new devotion. They have gradually spread abroad the idea that Issoudun was the one spot on earth where Notre Dame was to be revered as the gentle guide of the Sacred Heart of Jesus They have attracted crowds of devotees. These have left contributions behind them. The money which has been poured into the treasury of the missionary fathers has justified them in resolving that their church shall be one of surpassing beauty. And so it is. Only recently has it been entirely finished. A year ago, when it was on the verge of completion, it received special honour from the Pope. It received from him the title of Basilica, and so was taken under his especial patronage. Basilicas are of two orders. There are but four of the first order. These are at Rome, and are regarded as representative of the four first patriarchal cathedrals—those of Rome, Constantinople, Alexandria, and Antioch. The church at Issoudun is now one of the Basilicas of the second Order. One peculiarity of the edifice, which consists of two main parts, the church of the Sacred Heart and the chapel of our Lady, is, that its interior walls are mainly covered with native tablets of marble, all of uniform design in harmony with the architectural features of the church. Wherever the walls are not so covered they are painted with frescoes representing scenes from the Gospels or from the lives of the saints of every age of the Church. There is not a

window too in the whole building which has not a story to tell to the on-looker. The one over the high altar of the Lady chapel has in it the pictured representations of two living men.—Pius IX and the Archbishop of Bourges, Prince De la Tour d'Auvergne. Both of course are arrayed in their robes of ceremony, and as the Prince Archbishop took a leading part in the proceedings of Wednesday, the German pilgrims were able to compare the living Archbishop who dispensed his blessing so gracefully to the crowd through which he moved with his figure in the painted window. The steeple of the Basilica is surmounted by a statue of our Lord; but the main idea involved in the name Notre Dame du Sacre Cœur is symbolised within the edifice in the two figures of Notre Dame and the child Jesus, which are represented in fresco, in painted glass, and in statuary. The Holy Child stands in front of the Madonna, pointing with his left hand to his own sacred Heart, and with his right pointing upwards to his Mother behind him. The two figures, posed as they are, are vividly emblematical alike of the teaching which of late years has had so magical an effect upon the devotees of France—the teaching as to the Sacred Heart (teaching which involves the identification of the loving heart of our Lord with the mere heart of flesh, and the thrusting forward into painful prominence the representation of the same) the development of the worship of Mary, and the mingling of the two phases of worship in the special devotion directed to Notre Dame du Sacre Cœur.

Wednesday at Issoudun was quite a festive day. Six years ago on the same 8th of September, the statue of Notre Dame within the Church had had a golden crown placed upon its head, and on the same day last year the bestowal of the dignity of Basilica had taken effect. The day was therefore a two-fold anniversary. Many pilgrims had come to take part in it. Five hundred had come from Belgium, and a large number from Paris and from neighbouring towns. The German pilgrims made no attempt to keep themselves distinct from the others, and none of the ceremonies had special reference to them. All the pilgrims were met at the railway station at six o'clock in the morning by the clergy of the Basilica. They at once formed in procession. They sang enthusiastically a hymn calling upon Christians to defend the Holy Father to take up in his cause the pilgrim's cross, and to run to Mary and entreat her to bestow her protection upon the August Captive now upon his knees before her, upon him for whom the Vatican was a new Calvary. They speedily heard high mass celebrated in the Basilica, and later on in the morning they assisted at an open air celebration of mass in the broad avenue leading to the Basilica. The united band of pilgrims joined together in the chanting of the Nicene Creed, and then listened in silence to a stirring sermon in which the preacher seemed to string together all the terms of adulation which have ever been adopted by the most fervent of Notre Dame's devotees. In the afternoon the pilgrims all joined together in a procession through the town. More than a hundred banners waved in the dazzling sunlight, and more than 2,000 voices were raised in loud appeal to Mary and Joseph. Upon the latter the title "Friend of the Sacred Heart" has recently been bestowed. Ere long doubtless his name will become the source of a magic influence. The hymns which were sung to him, and the figures borne aloft of himself and the holy child, indicate the direction in which a special channel of devotional feeling will be caused to flow. For the procession a cluster of German countesses and baronesses assisted one another in bearing aloft a banner on which the name "France" was conspicuously inscribed, followed by a prayer to Notre Dame for pity on the desolated country. It was not upborne by reluctant hands, and yet it seemed strange to see such a banner entrusted to Germans. But the most friendly feeling was displayed towards the pilgrims from the land which only five years ago sent its host of invaders. Indeed the leaders of the pilgrimage were deeply impressed with an incident which occurred in the course of the day. The Count de Stolberg himself took no part in the late war; but a cousin of the same name was an officer in the German army, and took an active part in the operations in France. A French officer at Issoudun, identifying the leader of the pilgrimage with his cousin, came up to him, and with an emotion evidenced by tears in his eyes and a tremor in his voice, said that though they were once enemies they were now brethren, and followed up his words by cordially grasping the Count's hand. The ceremonies at Issoudun were closed with the Benediction service, with the lighting up of the interior of the church with the electric light, and with fireworks outside. The illumination had the immediate effect of transforming the pilgrimage observances into gala-day-like festivities. The pilgrims in the church could not restrain an exclamation of surprise as the vivid light suddenly flashed along the church and brought the dimly lighted altar into glittering prominence. The very natural outburst of delight was suppressed by a priest who reminded the people that they were in a church, but when they passed outside they gave free vent to their glee in witnessing the fireworks with which the day's festivities were ended.

But Lourdes is the spot which the Germans have looked forward to coming to with the greatest eagerness. The shrine of Notre Dame de Lourdes is the one for which they have prepared their magnificent banner. They reached here yesterday morning, but on that day the missionary fathers, because of the ceremonies in connection with the Belgian pilgrim age, could make no special arrangements for the Germans. They spent the day therefore in offering up private devotions in front of the grotto in which Bernadette Soubirous is asserted to have seen Notre Dame sixteen years ago in all the freshness of youth and beauty. The statue which now stands in the very recess from which the apparition is said to have smiled upon Bernadette represents Notre Dame as youthful and graceful. To this marble figure all the eyes of kneeling pilgrims are upturned. The spot where Bernadette knelt when the vision was first visible to her is marked by a special slab in the pavement. This is a favourite spot with the devotees. They kneel there, with outstretched arms, and radiant faces, on which one can almost read an assurance that if they gaze long enough and intently enough the same vision will be granted to them as Bernadette was blessed with. They drink eagerly of the water of the spring which is supposed never to have flowed before the day on which Bernadette, in obedience to the words of Notre Dame bidding her drink of the water which she would find springing up at her feet, scooped out a hollow in the grotto's floor. They enter the bath-house, and think themselves fortunate if they can immerse themselves in the water, which since it began to flow has wrought many wondrous cures. They go within the grotto's railings and present their medals and crosses and rosaries to be blessed by the priest always there. Often pilgrims may be seen moistening their hands with the water which trickles down the grotto walls, and applying it to sightless eyes or to ears dull of hearing. Or they buy cans capable of being hermetically sealed, and fill them with the precious liquid so that they may take it to those who cannot come to the sacred source itself. The rocks out of which the grotto has been hewn by the action of water are called the Rocks of Massabielle. Forty feet above the heads of kneeling pilgrims spring the foundations of a splendid church, the glittering cross and crown at the top of whose spire may be seen more than 300 feet aloft. Since its completion it, like the church at Issoudun, has received from the Pope the privileges of a Basilica. From its vaulted roof are suspended the 250 banners brought hither from the various cities and towns of France at the "feast of banners" in October 1872. Its walls too are adorned with other banner contributions. In its sanctuary are suspended golden lamps, and all the adornments of the altar are of the most costly character. The marble church and all its rich decorations have been paid for out of the offerings of pilgrims.

To offer up devotions at the shrine of the celestial lady who is supposed to have granted to a poor peasant girl a vision of her divine beauty, and to place their banner in the sanctuary of the magnificent marble Basilica raised to commemorate the marvellous apparition, the Germans have come on their long pilgrimage. The early part of to-day has been devoted to ceremonies having special reference to them. At seven o'clock this morning they all assembled in front of the grotto. They brought with them their banner. It is larger and more magnificent than any one that has yet been offered to Notre Dame de Lourdes. It has been entirely worked by hand from a design drawn by the Baroness de Oer, who is herself one of the pilgrims. The central figure is the Madonna. Kneeling at her feet are St. Boniface, the Apostle of Germany, and St. Elizabeth of Thuringia. I am reminded by one of the lady pilgrims that it was from England that Boniface went to Germany in the eighth century to preach the Gospel. Sentences from the Old and New Testament are inscribed on the banner around the figure of Mary, on the book held open by St. Boniface, and along the border of St. Elizabeth's mantle. But the legends of chief import are at the foot of the banner, and are as follows, except that I give a translation of the second legend, which is in German: "*Beatem me dicent omnes generationes.*—The Catholics of Germany beseech thee, O Virgin conceived without sin, for thy motherly protection for Church and Fatherland.—*Regina Pacis ora pro nobis.*" Father Sempe, superior of the missionary fathers at Lourdes, was at the grotto to receive the pilgrims and bless their banner. He addressed them a few words of genuine welcome. They were all, he said, fellow soldiers of the Church of Christ. They all had to fight in defence of the one true faith, to fight for the triumph of Christian charity, to

fight for peace—for peace with God, peace with their neighbour, peace in their own hearts. It was therefore a happy duty which devolved upon him to bless the banner which had been dedicated to the Queen of Peace. The ceremony of blessing was then proceeded with, and the pilgrims sang together a hymn to the Virgin; then, with their banner at their head, they marched in procession to the Basilica, where mass was celebrated, and all communicated. A sermon was preached by a priest who was averse to having his name mentioned, as he feared, though doubtlessly unnecessarily, that he might be deprived of his position as an ecclesiastical teacher, were it known that he had taken part in the pilgrimage ceremonies. There was nothing in the sermon of the preacher, of whom no one knew anything except that he came from Wiesbaben, calculated to bring upon him the censure of the German Government. He prefixed to his sermon a Latin sentence the equivalent of which is "Make me worthy to praise Thee, O holy Virgin!" He said that seven hundred years ago a man came from France to Germany, and in their most beautiful church, the cathedral of Speyer, after the Salve Regina had been sung, gave way to his feelings of deepest and tenderest love to the Blessed Virgin by exclaiming "*O clemens, O pia, O dulcis Virgo Maria!*" These words were as a monument which St. Bernard had founded for himself in all Catholic hearts. Since he uttered them they had been repeated as often as the Salve Regina had been sung throughout the whole world. The pilgrims from Germany had been drawn to Lourdes by the love of the same Heavenly Mother. The preacher thought they would best express their love and gratitude to her by adopting the words of St. Bernard. On their banner they could see their glorious Apostle St. Boniface and their dear St. Elizabeth, the model of virgins, of spouses, of widows, and of nuns. They with themselves implored the aid of Jesus and Mary. The first part of their prayer "*O Clemens!*" they might place in the hands of St. Elizabeth. She was merciful on earth. Every misery found its succour from her. The pilgrims ought to ask her to implore with them the Mother of Mercy, whose sweet hands were ever dispensing grace and assistance to those who needed aid in soul and body—to implore her aid and the aid of her Divine Son for their Holy Church, for their Holy Father, for their bishops and priests. The second part of their prayer "*O pia!*" they might place in the hands of St. Boniface, who brought to them the Holy Catholic faith, and who offered for the preservation of that faith his prayers, his labours, his sufferings, and his blood. Let the pilgrims ask him to implore the aid of Jesus and Mary for the Catholic Church in Germany, that she might again freely extend herself, and that this Holy Sacrament which he administered to their fathers might again be administered freely throughout their country; as to the last part of their prayer "*O dulcis Virgo Maria!*"—where should they place it? They would place it in their own hearts, and there they would keep it. Let them ask their sweet mother, their blessed Lady, to be their sweetness throughout their whole life, their support in affliction, their star in darkness, their leader to Jesus her son and her God. After having aided them in life she would be their sweet comfort in the hour of death, and they would go to her in heaven, and praise with her and all the saints the mercies of their God.

When mass was ended the pilgrims left the Basilica. All further ceremonies it was understood they would share in with the Belgians. In the evening all joined in a candle-light procession from the grotto along the winding paths which have been cut in the rocks above the Church. The moving lights and the many voices raised in song rendered this part of the proceedings very interesting and picturesque.

Lourdes will doubtless long maintain the influence it has succeeded in asserting over the minds of devotees of the Roman Catholic Church. The alleged cures must necessarily exercise a powerful influence. Most of them, it should be noted, are cures of paralysis and of other diseases arising from derangement of the nervous system, and may really be due to the shock which the strange scenes and the uncontrolled enthusiasm of the crowd of pilgrims produces upon the afflicted ones. Apart from its healing waters, its magnificent Basilica, its attractive grotto and sweetly smiling marble image, and the belief which has gained so strong a hold upon the minds of all who come on pilgrimage to its shrine that it is a spot favoured by the visits of Notre Dame, its mountain scenery is of the most varied and pleasant character, and would alone induce wanderers to stay to explore the banks of the Gave, which runs down from the snow-capped Pyrenees whose summits may be clearly seen glistening in the sunshine from the winding streets of the quaint old town.

The Germans will leave on Monday to proceed to Paray le Monial as pilgrims to the shrine of the Blessed Marguerite Marie, to whom also—if I may adopt under protest the language so familiar to Roman Catholic minds—she revealed the mysteries of the Sacred Heart. They will leave under the impression that a kindly feeling is rising towards them in the hearts of the French who have been witnesses of their devotion. Many of those with whom they have come into personal contact have certainly displayed towards them great cordiality. But they have received no more than silent courtesy from the great mass of on-lookers, who of course cannot understand that the Germans who have come to their shrine are the representatives of the ultramontane party and are strongly opposed to the anti-clerical policy of the imperial government. The people at Lourdes recognise the beauty of the German banner; but they also point to the banner of Alsace covered with crape which is suspended in the same Church. "There is no heaven for the Germans; they are all amongst the condemned" seems to be a common expression on their lips. They are not yet prepared to salute Notre Dame de Lourdes as the Queen of Peace.

LETTERS TO THE EDITOR.

A QUERY.

To the Editor of the Friend of India.

SIR,—Will you kindly oblige me by inserting the following query in your next issue and oblige.

Is a Government Civil Pensioner entitled to the services of the Civil Medical officer of the station without fee, or not?

A SUBSCRIBER.

THE AHMEDABAD RELIEF FUND.

To the Editor of the Friend of India.

SIR,—Allow me to make an appeal to the charity of the Public through your columns in behalf of the sufferers from the recent terrible flood in Ahmedabad. Nearly 6,000 houses have been either destroyed, or injured so as to necessitate pulling down, in the city alone; and in the districts also villages have been swept away, and immense damage done. Liberally as we have been aided from Bombay and elsewhere, there is still great need of further help. We have an account with the New Bank of Bombay, and subscriptions might be sent to me by cheque on any bank, payable to me or order.

W. NEWNHAM, C.S.,
Chairman,
Executive Committee, Ahmedabad Relief Fund.

ETERNAL PUNISHMENT.

To the Editor of the Friend of India.

SIR,—Having noticed the articles presented in the *Friend* in the last few numbers on the subject of a belief in the immortality of the soul's and the possibility of eternal punishment, I have become not a little interested in the discussion. I noticed that in the principal articles written it has been affirmed that the notion of the soul's immortality was an ingraft upon Christianity and not found in the written Word. I do not wish to affirm anything to the contrary, but a little light on the life and writings of St. Paul would perhaps enable me with others to see more clearly the foundation of your assertion that the doctrine is not a scriptural one. Paul was a Pharisee and the son of a Pharisee, and one distinctive feature of his belief must have been, as was the case with all Pharisees, that there was a life beyond death. Paul himself directly professes this belief, as recorded in Acts III. chap.

It may be said that this does not affirm actual immortality but merely a resurrection, some may put this limitation to the belief of the Pharisees, but as an inquirer for truth I would ask to be shown that though poorly defined the Pharisees did not hold and teach the doctrine of a future state and therefore the soul's immortality regardless of any promise of receiving it upon obedience.

AN INQUIRER.

INDIAN DISESTABLISHMENT.

To the Editor of the Friend of India.

SIR,—Mr. Ross and 'Mofussilite' may well be left to fight out the question of the expediency of Indian disestablishment,—whether that is, Christian willinghood would or would not supply the gap it would cause.

But as to the question of injustice,—government servants are supplied by their employer with the benefits of subsistence, of medical attendance, of protection; shall they not then be supplied with the highest of all benefits, those of religion? The objection to this being done is based on the right of conscience. Now in the case of Hindoos surely their conscientious objections must be far greater to maintaining a cow-killing commissariat than to paying the chaplains who, ministering only to Christians, in no direct way outrage Hindoo feeling. Beyond this

'Mofussilite' has shown the worth of this objection of conscience even to me who am opposed to State support of religion. But those are on still firmer ground who refuse to see any difference between religious and other benefits except that of a far higher value. It is the notion that there is some essential difference that is at the root of all objections to establishment, and it is simply due to the sectarianism which has elevated into matters of conscientious scruple differences of religious opinion, which are the mere accidents of Christianity, not its principles.

DOKIMASTES.

POETRY.

THE BULL IN THE CHINA SHOP.

In days of infancy my nurse would lull
My weary spirit to a soft repose,
By singing songs I now think somewhat dull,
And uttered too much through her saintly nose.

My offspring still affect or fain delight
At hearing songs from this same sometime fair:
And one of these is all about a fight
Between a bull and certain China ware.

The bull to wander through the open wold
All unopposed had been accustomed long,
And though in search of pasture sometimes "sold,"
Had his own way—for he was mighty strong.

In lane or street he ne'er went by ill luck
And met a lonely maid or feeble child,
Attired in red, but he would run a muck
And gore the wearer—for his ways were wild.

His master feared him least of all and knew
The way to make him ever do his will:
For though amenable to very few
The bull to him gave daily homage still.

When o'er the fertile lands of lovely Fr—nce
His master chose to ride a rough shod steed:
The bull contented was to stand and dance,
Nor cared how much his nearest friend might bleed.

This wooden headed brute in bovine shape
Has recently slept soundly as a top:
But now alas! has got into a scrape,
And sits uneasy in a China-shop.

His master finding him no more of use
Has turned him out to graze where'er he likes,
And he not knowing yet that he is loose,
His head against the nearest lamp-post strikes.

'Tis said, but much I doubt if people know,
His master had some qualms of conscience still,
A thing unusual for him to show,
Which made him hesitate the beast to kill.

But though he felt compunction at the thought
Of slaying one who always served him fair,
'Tis said he will not scruple—when he's caught,
Murdered, and quartered—in the spoil to share.

THE WEEK.

THE Chartered Mercantile Banks has declared its half-yearly dividend at the rate of 8 per cent. per annum.

THE weather here during the past week has become delightfully cool and pleasant, and the cold season appears to have decidedly set in. All over the country similar reports are made, and in the neighbourhood of Simla snow has already fallen. As Ice is again 2 annas a seer, this change in the weather is profitable as well as pleasant.

MR. ALLEN has been acting as Coroner this week, owing to the absence of Mr. Marsden on a week's holiday, and as suicide is quite the rage at present he will have had no sinecure. The Fort Chaplain, the Reverend H. J. Mathew, is expected back from furlough in about a month, and the present incumbent, the Reverend A. O, Hardy will then remove to Bankipore.

IT is said Mr. Hogg will be back in Calcutta on Monday; he was last heard of at Simla, pressing the inhabitants to subscribe to the Prince of Wales's Entertainment Fund. The question of the election of a Vice Chairman to the Justices will no doubt be taken up at once, and in the meantime Mr. Roberts' friends are pressing for more signatures to the memorial in his favor. It is believed that at least one fresh candidate will be brought forward, a military man, with support of the Chairman, Baboo Bysack being apparently thrown overboard.

THE use of mosquitos has at last been found out, of course by an American, and now when those disagreeable insects are renewing their attacks upon us in force it is consoling to think that they are not absolute evils. The first object of their being is to drive the human race from inhabiting "malarial districts," but as such districts as Bengal are not likely to be given up while the desire of wealth actuates the human mind, a second mission has been provided for the tormentors, namely to inject a liquid into the human frame, which firstly thins the blood, and secondly acts on the system as quinine, and thus counteracts the effects of the malaria.

BUSINESS will be resumed on Monday, and there are signs that the money market will be at all events steady. Exchange on England is higher at Bombay, and a similar advance is looked for here, though the little business that has been done here during the holidays, by one or two of the Banks which opened for the mails, was carried out at only a little over previous rates. The price of Silver in London has risen to 57*d* and the rate of discount in the open market to $2\frac{5}{8}$ per cent.

Rates of Exchange here are looking stiff, at 1-10 3-16 for six months' sight Bank Bills, and to-day 1-9$\frac{7}{8}$ has been given for telegraphic transfer. Document Bills look stiff and are not saleable at 1-10$\frac{1}{4}$ to 1-10$\frac{5}{8}$ either for acceptance or payment.

IT is after all a little doubtful that the China question is absolutely settled, and that England may not be driven, however unwillingly, to exercise force for preservation of its prestige in the East. The King of Burmah has now conceded the point of allowing a military escort to accompany an expedition through his country to Western China, but he has not done so in a hearty manner, and in the Chinese ports the feeling seems to be that Chinese Government promises are not to be too implicity relied upon. It is no doubt very desirable to abstain from being forced into war unnecessarily, but it would be very ill judged to go on being humbugged by the Mandarins when it is clearly seen they only wish to gain time. From Shanghai, on the 10th October, it is telegraphed that the main points of our demands still remain unsettled, and that the prospects of a settlement are doubtful.

THE holidays have now dragged their weary length along, weary at least for those who have had to remain in town with nothing to do, and nothing interesting to read, for the newspapers are very empty at present, and the only one of them that has been enterprising enough to start a holiday topic has had nothing better to propose than an enquiry into the personality of the devil. This elicited a crop of letters to the editor apparently from the regular set of amateur theologians who are always ready to supply him with supernatural information, but no definite result has been arrived at amongst them.

THE Prince of Wales has now started, but when he will arrive cannot yet be said, as the *Serapis*, after her improvements, has turned out a slow ship, and an engineer has been despatched from England to Malta to see what can be done with her. The preparations in Bombay for fireworks and illuminations seem progressing rapidly, and if little or nothing has yet been done here, there is plenty of time ahead to profit or take example by successes or failures elsewhere. In some parts of the country there is a disposition to overdo the thing, and large sums of money will be uselessly wasted; if the Prince were allowed to see the country in something like its natural state, the pleasure as well as the profit of his journey would be the greater. For example, it has been thought important enough to telegraph from Bombay that Southdown sheep have been imported to provide mutton, and altogether there appears to be too much of a desire to import *Pall Mall* as much as possible along with its principal inhabitant. One of the best ideas is the Polo Match to be played here between a Munipore team, in charge of Dr. Brown and some of the crack Calcutta players, and as a preliminary, on the same day, it would not be a bad thing to give his Royal Highness a tiffin at the Calcutta Cricket ground, with a little play to follow. He would thus see one of the most characteristic and pleasant of Calcutta Institutions.

THE attendance at Lewis' Theatre has so far been very poor, and even on the night of Mrs. Lewis' first appearance there was but a beggarly array of empty benches. We hope to see an improvement after the holidays, but it cannot be denied that the Company, with some exceptions, are of a provincial, unfinished character, and Mr. Lewis would have been much more judicious had he gone in for quality rather than quantity. It is true that the same want of finish and cultivation of style is visible to some extent in the other colonial company, but then Miss May is such a host in herself, and Opera Bouffe has proved itself so suited to the taste of a Calcutta audience, who want something light and amusing after the lassitude of the day, that the Corinthian has had splendid houses every night of performing. The very absurd and laughable "Genevieve de Brabant" has per-

haps been the best received of anything yet presented, but it is questionable if it was so well performed as "Blue Beard," taking the characters all round. As in the Grand Duchess, so in Genevieve, the Prima Donna stood out conspicuously far superior to any one else in the caste, and if she had not been quite so superior, perhaps the play as a whole would have been more pleasing. Miss Howe did very well, better than in any previous attempt. Mr. Rainford and Mr. Vernon, in the policeman song, were very good indeed. English's company open on Wednesday, and from all that is known of them, some good finished acting may be expected.

INDIAN INTELLIGENCE.

BENGAL.

THE new railway line to Darjeeling is to be opened on New Year's Day.

THE Viceroy will leave Simla on the 15th instant, arriving at Calcutta on or about the 8th December.

MR. FERDINAND SCHILLER is returning to India this month. It is reported that he intends to lay before the Governor General in person expostulations against His Excellency's policy in permitting the stoppage and confiscation of the Himalaya Mines, in which he is interested, by the Lieutenant-Governor of the Punjab, as well as to demand some redress for the injury sustained, which has been vainly solicited in memorials sent to the Viceroy fifteen months ago, but never replied to. The Marquis of Salisbury has already recorded that the proprietors "have been most shamefully treated."

NORTHERN INDIA.

DURING Mr. Mackworth Young's absence on three months' privilege leave, his place as Secretary to the Financial Commissioner, Punjab, is to be taken by Mr. Fryer, the Settlement Officer at Jhang. Mr. Fryer will be stationed at Lahore.

MR. T. H. THORNTON, D. C. L., Secretary to the Punjaub Government, will officiate as Foreign Secretary during the absence, on furlough, of Mr. Aitchison. It is to be assumed that Mr. Thornton's knowledge of Central Asian and Frontier politics has chiefly recommended him for distinction.

THE celebrated suit of Bertola *vs.* the Secretary of State for India in Council, in which plaintiff claims Rs. 200,559, came on for hearing on the 4th instant in the Mooltan District Court. This suit is for alleged breach of contract by defendant's agents in June or July 1873, and will certainly be an interesting one.

IT is hoped that H. R. H. the Prince of Wales will, either on his way to Jummoo or on his return thence, open the P. N. State Railway bridge over the Chenab. The Prince, we believe, was present at the opening of the longest bridge in the world, and when the Chenab viaduct is completed, will open one considerably longer.

SOME time ago Mr. Delmerick, Extra Assistant Commissioner, told Mr. Smyth, the Deputy Commissioner of Delhi, that Mr. Peacock, the Small Cause Court Judge, had decreed a case against himself in his own Court. Mr. Smith, without inquiring into the truth of the statement, reported the matter to the Commissioner, who in his turn reported it to Government. Mr. Peacock, on learning this false statement and on being supplied with the correspondence, has sued both Mr. Delmerick and Mr. Smyth for libel, damages laid at Rs. 3500.

A CORRESPONDENT writing from Gwalior on the 30th ultimo says :—"Colonel Hutchinson resumed charge of the office of Resident on the 22nd ultimo and Colonel Osborne left that very afternoon for Bhopaul. It is rumoured here that General Daly takes leave in the month of March next. Some of the more important public buildings, such as the Phool Baug and the Newlukka, are being pushed forward with great energy in view of the expected advent of His Royal Highness the Prince of Wales. It is believed that the Phool-Baug alone will cost H. H. Scindia the magnificent sum of Thirty lakhs of rupees.

A SEVERE thunderstorm, accompained with hail, passed over Lahore on the night of the 4th. The hailstones were said to have been some of them nearly as large as a pigeon's egg, and rattled with considerable force on the roofs of houses, breaking glasses, &c. The lightning was most vivid. It blew almost a gale, the wind being from the North. The rain lasted from 9 o'clock to 1 A. M. when it ceased for about half an hour. After a short cessation the thunder which had died away resumed its mutterings, and the rain descended once more, though not so heavily as before, and did not cease for a couple of hours.

A CORRESPONDENT mentions a rather unfortunate accident caused by H. H. the Rajah of Kuppurthala. Shooting kites is, we believe, His Highness' favourite pastime, and the other day when indulging in this amusement he accidentally shot an attendant belonging to his suite, who was occupied in throwing into the air a number of bones in order to attract the birds within range of the Rajah's gun. The man was standing about twenty yards in front of the Rajah, and was hit rather hard. The man had a very narrow escape, as several grains of shot penetrated his lungs.

THE death-rate of many of the large towns in the Punjab is, if we are bound to take the words of the Sanitary Commissioner, Mr. A. C. DeRenzy, "terribly high" indeed. For the week ending 4th September, that of Palwal was 372; of the Delhi suburbs 164; of Rewary 115; of Umritsar 113; and of Panipat 100 per mille per annum. Panipat, then, must be losing its population at a rate which will completely depopulate it in ten years, and Palwal will be left without an inhabitant in less than three! We cannot imagine what purpose the publication of these incredible figures in the *Gazette* can answer, except that of throwing discredit on Punjaub statistics generally.

A VERY melancholy accident by which no fewer than fifty unfortunate individuals were deprived of life, has occurred at Kurrachee. The particulars of the sad affair may be thus briefly summarized.—The *Cotia Versael*, Tindal Mahomed, from Kutch Mandavie, was making the port in ballast trim, she having no cargo on board; there were, it has been roughly estimated, about seventy people in the vessel, including the crew, the majority being passengers. From the tindal's account, the *Cotia*, while running into the harbour, came into violent collision with the extreme end of the Manora Breakwater, which extends far out into the sea, and after bumping heavily against it for a short time, the ill-fated craft literally went to pieces. The scene at this particular moment may be easily imagined; men, women, and children were thrown *en masse* into the sea, which, at the spot indicated, is heavy at this time of the year, and was, we learn, when the accident occurred, unusually rough. In the darkness it must have been futile, in the absence of all assistance, to endeavour to avert the fate which the struggling mass of humanity must have frantically striven to avoid, and which overtook so many. The tindal jumped on to the breakwater, followed by his son, and they, we learn, are the only two of the crew that were saved. The cries of the unfortunates were heard at Manora, and the Port Officer was not long in making his appearance on the scene. Captain Parker did all he possibly could to save life, and he succeeded in rescuing seventeen individuals, the total number spared of the seventy supposed to have been in the *Cotia*. Dead bodies were observed floating about the next day, and the energetic Inspector of Town Police, Mr. Bozenjee, had his men busily at work picking them up. The sight was a most heart-rending one, the lamentations of those who had lost relative and friends being most pitiable; women rent the air with their shrieks, crying bitterly over the lifeless bodies of those near and dear to them. Such a spectacle was enough to move the stoutest heart. The greater number of the passengers were Borahs and Khojas, who had their families and their dwelling-places in Kurrachee. The cause of the accident was, as may be imagined, the steering of the *Cotia* in a wrong direction; instead of her being brought round so as to avoid the breakwater, and to keep her well clear of it, she was steered bodily on to it with the results mentioned. Had there been a light on the breakwater, the accident, it is not too much to affirm, would never have occured. How is it that the ordinary precaution has not been adopted of having a light on a projection so dangerous at night as the breakwater must be? Now, of course, that such serious consequences have occurred from the want of the commonest forethought on the part of the Port Department, we shall be having a light exhibited where the want of one ought never to have been allowed to exist.

BOMBAY.

THE State Railway line from Ajmere to Nusserabad is to be opened as soon as the rains have ceased and the line has been examined.

A PRINTING press is shortly so be set up at Indore at the local Government's expense. About Rs. 6,000 have been sanctioned towards the expenditure.

A CASE is pending before Mr. Wilson, full-power Magistrate of Kaira, in which the chief native police constable of talooka Anund is charged with bribery.

RAO SAHIB NARAIN BHAI DHANKIDAR, Principal of the Poona Training College, has been appointed to the vacant Directorship of Public Instruction, Berar.

WE hear the members of the "Poona Ryots Commission" intend to inquire into the ryots' long-talked of grievances personally by visiting their talookas in the Poona, Ahmednuggur, and Sholapore Collectorates of the Southern Division. They will leave for those districts shortly, and will satisfy themselves as to the ryot's grievances thoroughly.

ADMIRAL MACDONALD, C. B., the new Commander-in-Chief on the East India Station, is expected to arrive at Bombay from Trincomalee with four ships of his squadren on the 20th instant, and he will, on the arrival of the Flying Squadron about the end of the month, take command of the whole fleet, consisting of eleven men-of war and the "Serapis" and "Osborne."

A STRANGE occurrence is related by a vernacular contemporary to have taken place on the night of the 3rd instant at the temple of Mahadeo in the Bhimpore talooka, seven miles from Surat. The cocoanuts laid as an offering at the idol's feet went off with an explosion, the sacred kettledrum burst of its own accord, and spontaneous combustion set Mahadeo's image in a flame, leaving only the trunk and head unconsumed.

IT is stated on good authority, that the Tutor to be appointed for the charge and education of the young Gaekwar of Baroda, is to be selected from the Civil Service. The choice will probably fall to the lot of one of the Civil Servants of the Bombay Presidency, or of the Central Provinces, as a knowledge of the Mahratta language will no doubt be deemed an essential condition and qualification for undertaking the tuition of the young Prince.

ACCORDING to a report forwarded by Mr. Thakordas Atmaram' one of the Honorary Secretaries to the Ahmedabad *Flood* Relief Fund, "in Duscroi talooka six villages have been entirely washed away, four almost, and the rest more or less; in talooka Sanund two villages have entirely gone, and the rest are destroyed to a great extent; in Dholka talooka the loss is also immense, about twelve hundred houses have been destroyed; in Kaira zilla three villages have been entirelv destroyed and one partially." Large quantities of grain have been despatched for the relief of the sufferers, and at a public meeting held at Bombay on Friday last, it was resolved that the unappropriated balance of the Famine Relief Fund collected in the Bombay Presidency, amounting to Rs. 21,000, should be devoted to the same purpose. The new Bank of Bombay, with which the money was deposited, has very considerately offered to pay it over at once, instead of demanding the usual notice of withdrawal.

ON August 30 the London solicitors of the late Gaekwar of Baroda, Messrs. Lattey and Hart, addressed a communication to the Marquis of Salisbury, Secretary of State for India, respecting the question of the Gaekwar being allowed to have interviews with his solicitors in India, Messrs. Jefferson and Payne. The letter reviews the previous negotiations on the subject, and mentions the conditions upon which the permission desired would be granted. But it goes on to recite that the Government of India refused to allow the Gaekwar to have interviews with his solicitors unless in the presence of Government officials, and that this qualified privilege was declined by the Gaekwar. Messrs. Lattey and Hart feel satisfied that His Highness has not been sufficiently informed to enable him to disabuse his mind of the fear under which he evidently labours, and they ask that a preliminary meeting be allowed between His Highness and his solicitors without a Government official being present. The reply from the India Office, signed by Horace Walpole, dated September 3, is as follows:—"I am desired by Lord Salisbury to acknowledge the receipt of yours of the 30th ultimo, and in reply to express his regret that he cannot accede to the request you therein make."

MADRAS.

IT has been decided to open the South Indian Railway line from Madura to Tuticorin and Tinnevelly early in December.

IT is stated that the Prince of Wales has accepted an invitation to visit Hyderabad on his return trip to Bombay. Preparations on a magnificent scale are being made for the occasion by the Nizam of whose delicate health we now hear nothing.

THE good people of Mysore city, alarmed at the idea of the Maharajah leaving his capital; are, a Bangalore paper says, getting up a petition to the authorities, praying that he should not be allowed to take up his residence in Bangalore. The same outcry was raised with regard to His Highness' annual trip to the hills.

THE Bangalore correspondent of the *Times of India* writes: "Lieutenant Carlyon, 106th Regiment, is now under medical supervision, having been pronounced insane; he has been very eccentric lately, and his last was the issuing of an "at home" invitation to the station, including the Mysore Rajah and the ex-Gaekwar. He is now in hospital, and is under very careful treatment."

TWO coadjutor Bishops for Madras will be consecrated within the next few months in the persons of the Rev. Dr. Caldwell and the Rev. Dr. Sergent. The consecration will probably take place at Poona—the officiating Bishops being the Bishops of Calcutta and Madras and the new Bishop of Bombay. It is also likely that three or four other Bishops will soon be consecrated for different parts of India.

THE Nizam of Hyderabad has made definite arrangements with respect to the Chanda line of Railway. We are informed that it will be 210 miles in length, and constructed by the D. P. W. It is reported that the Nizam's State Railway maintenance establishment is to be maintained by the Nizam's D. P. W., instead of, as at present, by the British Railway branch. It is said that such an arrangement is not looked upon favourably.

COMPLAINTS having been received from the Village Moonsiff of Puther, that the monkeys transported recently from the Sreeungum pagodas to the Pachamalais or Greenhills and the Kolimallais, have caused great damage to the surrounding fields and plantations, directions have been given that these posts be removed to such parts of these hills as are four or five miles distant from any cultivated or inhabited portion of the country.

AT last the Tellicherry Branch of the Oriental Bank Corporation is in a fair way of obtaining its dues from Messrs. Baudry and Co., merchants of the same place. The claim brought by Messrs. Ravot at Coupery, which hitherto acted as a bar to the Bank selling the property of Messrs. Baudry and Co., has been disallowed by the Court, and it is believed that the decree passed in favour of the Bank will be executed before long.

WHILE certain workmen were digging in the Band Stand, St. Mark's-square Bangalore, they came, at about 2½ feet from the surface, upon what appear to be copper wires covered with guttapercha. It is stated that this will lead to the discovery of treasure, a masonry channel built of strong Mysore stone used in the construction of the fort being a sort of line along which the wire is laid, and the wire is supposed to lead to something. The authorities are divided as to whether to go on with the excavation, and find out to what it may lead, or to desist from the work.

A CORRESPONDENT writes from Calicut:—"Great doings at Beypore in the way of building pandals. One pandal is to cost Rs. 9,000 for H. R. Highness' reception, another Rs. 6,000 for the Zamorin. Breakfast for 30 people including the small fry downstairs. I hear that the officers of the fleet are to have a dance given them by us Calicut folk. It is also not improbable that there will be a masonic demonstration. The Grand Master of Bombay will perhaps accompany the Prince from Bombay to Calicut, and if he does there will probably be some grand doings here in connection with our new lodge."

HIS Highness the Rajah of Cochin has been invited not only to meet His Royal Highness the Prince of Wales at Madras on the occasion of the latter's visit to this Presidency, but also to attend the Chapter of the Order of the Star of India to be held at Calcutta. Similar invitation has been sent to the Travancore Maharajah. His Highness of Travancore will go on to Madras as well as to Calcutta, but the Prince of Cochin is forced to abandon the visit to Calcutta from constitutional incapacity for lengthy travel, as well as for other considerations. The Cochin Rajah has resolved however to visit Madras to meet the Prince of Wales, in accordance with the Governor's invitation. His Highness has invited the Travancore Sovereign to be his guest in Cochin both on his onward and return journey from Calcutta.

THE Bishop of Madras has brought to the notice of the Government that in St. Mary's and the two contigious burial grounds in the heart of the city of Madras, the bodies of persons who have died from cholera, typhoid fever, and other contagious diseases, are usually interred in graves into which the water of the Cooum river percolates. The graves are required to be of a minimum depth of six feet, and water is usually reached at four feet from the surface, so the remaining two feet has to be dug in the water, and baled out immediately before the funeral. The information has been communicated by His Lordship with special reference to the proposed sojourn of the Prince of Wales in Government House, Mount Road—a building within a few yards of the Cooum—which has since 1860 been the scene of the death of one Governor from cholera, and of another from typhoid. The Government have directed an Engineer officer to report upon the sanitary condition of the building and vicinity.

MR. VANSTAVERN, of the P. W. Department, stationed at Dumagudiem, in the Kistna District, recently discovered in his range, hidden in the ground, an ancient monument, which he offered to send to Madras for the museum, if Government would accept the gift. The monument is a metamorphic slab, some 4½ inches thick, and bears date, in badly cut-letters, Vikramarka 1160. The date Vikramarka 1933 would correspond with our year 1875, so that the slab in question is 773 years old. Near the spot where this slab was unearthed Mr. Vanstavern also found a small oval gold coin, very much defaced, but under the magnifying glass shewing a Hindoo goddess on one side, and some few letters, which make up the name of one of the Talingana Kings at Warrungul, on the other side. Government have accepted Mr. Vanstavern's offer to send the stone to the Museum, and have directed the Superintendent of that Institution to disburse any charge which may be incurred for its transport down. A tracing of the stone is to be taken and lithographed and forwarded to the *Indian Antiquary*.

TWO prisoners were lately put upon their trial before the Sessions Court of Coimbatore on a charge of having murdered a boy of about twelve years of age for the purpose of obtaining possession of his earrings and other ornaments. The boy, who was in the habit of going out tending cattle, did not return home as usual one evening. His father, on enquiry being made, learned that he had been called away by the first prisoner, and the next morning his body was found floating in a well with the ears cut off, and otherwise mutilated, and the earrings worn by him taken away. The first prisoner on being charged with the crime at once confessed and implicated the second prisoner, and the latter produced the earrings from a place where they had been buried, while the first prisoner gave up the knife with which the crime had been perpetrated. Before the Court of Sessions both prisoners denied their guilt, but the assessors had no hesitation in convicting them, and they were accordingly both of them sentenced to suffer death, which sentence having been confirmed by the High Court an appeal for mercy was preferred to H. E. the Governor in Council, but this also has been rejected, and the sentence will accordingly be carried out.

IN that elaborate official document, the Census Report of the Madras Presidency, attention is drawn to the circumstance that the bulk of the native officials employed in the Uncovenanted Civil Service of the Presidency are Brahmins. The members of the twice-born caste, either by their alleged superior intellectual ability or by some other means not equally creditable, have contrived to acquire a large share of many of the higher appointments that lie within the reach of uncovenanted servants. When a sheristadarship or any other high post becomes vacant, a Brahmin is selected as the right man in the right place, and it would appear that in future, the post of head uncovenanted assistant in the Government Secretariat, at least in one department, will be considered a monopoly for the same caste. Turning to certain statistics in our possession, we observe that out of 63 deputy collectors in this Presidency, 25 are Brahmins: 15 belong to other castes, 21 are Europeans or East Indians, and 2 Mahomedans. Among the 21 Huzzur Sheristadars belonging to the collectorates, 12 are Brahmins, 7 other castes, 2 Europeans or East Indians. Of 156 Tahsildars, 93 are Brahmins, 50 belong to other castes, 8 are Europeans and East Indians, and 5 Mahomedans. Among 154 Taluq Sheristadars we have 126 Brahmins; of 174 Sub-Magistrates there are 111 Brahmins, 51 other castes; of 20 Head clerks in Collectors' offices, 9 are Brahmins; of 21 Head Accountants there are 11 Brahmins. So that in all these grades we have a total of 609 subordinates, of whom 387 are Brahmins, 162 of other castes, 46 Europeans and East Indians, and 14 Mahomedans. It will be seen from the above figures that the Brahmins are pushing their way more successfully than other castes in Government employment, and perhaps at no remote period, most if not all the higher uncovenanted posts in this Presidency will be entirely filled by them.

THERE has, says the *Deccan Herald*, been a great increase in the returns of human poisonings which have taken place within the

past two years, and the attention of the authorities has, we believe, been directed to the subject. It is one of the most important subjects which the Government could take in hand. It has been found that cases resembling cholera have taken place ; the persons have died and even been buried ; a slight suspicion has arisen regarding the cause of death ; the bodies have been exhumed, and inflammation of the stomach has been found to have taken place, in some instances with slight perforation of, the stomach, and a large quantity of arsenic found in the liver, though nowhere else. This shows how important it is that all cases of sudden death should be carefully inquired into. We doubt not that an outbreak of cholera is often taken advantage of by wicked unscrupulous persons to get rid of those who stand in their way, and that there are many cases of poisoning in this country which are never found out. In an outbreak of cholera there is always great necessity for prompt disposal of the dead for the sake of the living, so that it is much more easy for murderers to perform their deadly work. In cases of Hindoos, when the body is burned there is no fear of the offence being ever found out. Even in religious festivals it has been found that poisoned bread has been used in the religious ceremonies, for what purpose no one was able to find out. But when we know that there are Hindoo deities that can only be propitiated by human sacrifice, and that Government forbids such sacrifice, we need not wonder that the needed victims are obtained by means which are not likely to be detected, as attacks of this kind are usually supposed to be caused by cholera brought on by the overcrowding and fatigue of the *juttra*. We hear that a case occurred at Vingorla, where a man distributed some sugar to four persons—a man, a woman, and two children. The children died in consequence with symptoms of irritant poisoning, the others recovering. It seems that the poisoned sugar had a short time before been used at some religious ceremony placed in "front of their god." On examination, the sugar was found to contain white arsenic to the extent of 61 grains to the ounce.

CEYLON.

CHOLERA still continues to be reported from many quarters There is every reason to believe however that the cases are sporadic

THE prospects of sport for His Royal Highness the Prince of Wales in the Trincomalee jungles are, we hear, excellent. The district, it is said, is well stocked with elephants.

BURMAH.

IT is now officially intimated that the King of Burmah has consented to the next Mission through his territory to China, or *vice versa*, being accompanied by an escort of British troops. The following extract from a communication addressed by the Kin Woon Mengye, the Burmese Minister of Foreign Affairs, to our Resident at Mandalay, is published in the *Gazette* for general information :—"In regard to that portion of the letter which states that until the result of the investigation is known His Excellency the Viceroy is unable to say whether or not he will send a fresh expedition, but that he desires his thanks may be communicated to His Majesty for having offered to Captain Strover to send the Mission back to China if arrangements can be made, and directs that the Burmese Government may be informed that should a Mission be sent again to China, it will be necessary that a sufficient escort of British troops be sent with it to protect it from attack and insult,—and also with reference to the letter dated 14th June 1875 from the Envoy, in which it is stated that the Chinese Government have issued fresh passports for a new Mission from Burmah to China, or *vice versa*, if the Viceroy sees fit to send one, I have the honor to say that should such another Mission be sent to the Chinese territory, it may be accompanied by an escort of British troops sufficient for the purpose stated [in the letter]; and I request that, in accordance with the existing friendship [between the two Governments], you will inform me of the strength of the escort previous to the despatch of the Mission." This result of Colonel Duncan's negotiation with the Court of Mandalay seems to be accepted as satisfactory at Simla. But it would be premature to assume that it completely disposes of the question at issue. There is still plenty of room left for diplomatic haggling about the proper strength of the escort which is to protect the officers of the Mission from "attack or insult," and when the time for its despatch arrives, it may be discovered that His Burmese Majesty entertains on that all-important point opinions which differ considerably from those of the Government of India.

ASIA.

IT is reported at Bombay that Sir Lewis Pelly will succeed Sir Alexander Alison as British Minister at Teheran.

THE tea exported from China during the current season swells up to a somewhat alarming total. The published returns show that some 55,500,553lbs. of the fragrant leaf have left Shanghai and river ports alone since the 1st of May last.

THE new press laws restricting the Japanese newspapers within reasonable bounds as to libel, are powerless to prevent them from indulging in sensationalism. Witness what the *Akibono Shimbun* says :—"We have heard a wonderful report to the effect that a conspiracy has been organised, whose object is to introduce a republican government into Japan. The number of conspirators is said to amount to many hundreds. Some officers of the Government are reported to be among them. We imagine that no such enterprise will be undertaken under our present righteous government." The *Japan Gazette* remarks concerning the attitude of the native press :—"The native newspapers are using sarcasm most freely, and of the most transparent kind, in their comments on the press laws. They make it appear that these laws have been drawn up by a committee composed of Solomon, Haroun Al-raschid, and Wilberforce, with John Howard as Secretary. Even in the use of this harmless weapon they may go too far. The press laws, if carried out to the letter, can make even 'chaff' an indictable matter—because it is inflammable."

THE prospectus of the Central Asian Company, "Limited," with a capital of £120,000 and power to increase it, has just been issued. The new company, we are told, will take over the good-will, business, and property of the old Central Asian company for a sum of £6,000, and anticipates doing a lucrative trade with Turkistan, Cashmere, and Afghanistan, as well as in the Punjab. Warehouses, from which local merchants can be supplied with goods at more favourable rates than they can themselves import them from Europe or India, will be established at Srinaggar, Peshawur, and eventually at Leh, and the Company will receive payment in either cash or produce. The concessions obtained from the Maharajah of Cashmere are said to be of great value, and the Directors profess to look forward with the utmost confidence to the future results of the trade they are about to establish. We need not say that we wish well to this new development of British enterprise. Of the probabilities of its success, which will largely depend upon the future progress of Central Asian politics, every intending shareholder must judge for himself, but granting the continuance of peace, we see no reason why good management should not bring the Central Asian Company Limited fair dividends. The trade already done with Yarkand is said to have realised handsome profits.

THERE has been another outbreak at the Shantung Promontory. Mr. Henderson, the chief engineer of the lighthouse department, and the assistant light-keeper of the place, accompanied by the Chinese servant and a boatman, were attacked a few days ago in the neighbourhood of the lighthouse by a mob of about forty Chinese. The Chinese servant was knocked down and beaten. Mr. Henderson was seized by three men and beaten, and the assistant light-keeper also received some blows. The Chinese were armed with hoes and grass-cutting knives, and one of these knives was thrown at the assistant, and hit him with the butt end. If the blade had struck him, it would have inflicted a servere wound. Mr. Henderson and his companion only managed to extricate themselves by defending themselves as well as they could with their sticks, and then taking to their heels ; but they were pursued, and while leaping a ditch Mr. Henderson was struck two blows by the Chinamen, one of which drew blood. Two of the Chinese were sent back a couple of days later from the district magistrate's yamen, and the appearance they presented showed they had been rather more than half-murdered at the hands of the mob. The chief instigator of this disturbance was a Chinese retired literary man, or mandarin, named Lee-woo, who has been the cause of a great deal of trouble there already.

IN his new work on Cashmere, Mr. Drew gives us an interesting description of the Baltis and Baltistan. Some of the Baltis, it appears, serve the ruler of Cashmere as soldiers ; the regiment is dressed in Highland kilts, *plus* old grenadier headpieces ! The tribe delight in horseflesh, and play polo with great vigour. And this brings Mr. Drew to the most generally interesting chapter of his book, namely that on polo. Every one interested in the gentle art of hockey on horseback should peruse Mr. Drew's remarks, many of which are both novel and interesting. Baltistan is one of the homes of polo, and many is the game that Mr. Drew has played there, sometimes with a chieftain for opponent, or a Rajah for partner. It is quite the national recreation, and all classes join heartily in it. Mr. Drew tells us that Englishmen at Calcutta first learnt polo from the people of Munnipore, on the borders of Burmah. In the Punjab the game began to be played about ten years ago, it having been introduced into that country almost simultanously from Bengal and Cashmere. English visitors to Cashmere first played it in 1863. Polo is now familiar to every station of any importance from the Himalayas to Cape Comorin. The game as played amongst the Baltis has a few striking peculiarities. Mr. Drew draws especial attention to the Baltis' polo stick, which he rightly considers to be a great improvement upon those which are employed in Calcutta, and which have found their way thence to England. Mr. Drew gives drawings of the various Polo Sticks in use, and from them the superiority of shape in the Baltis' stick is quite palpable. Polo stick manufacturers should pay some consideration to Mr. Drew's remarks under this head ; whilst lovers of the game will read with interest his descriptions of the matches fought out in narrow strips of turf in lofty valleys overlooked by eternal snow.

MILITARY.

AT Lucknow, the troops in cantonments are rapidly regaining health, and the accounts from the several camps are quite satisfactory.

THE fortress at Gibraltar is to be armed with 38-ton guns, and the sum of £75,000 will be required to carry out the requisite works for mounting the new armament.

WE learn from Secunderabad that Captain Wannel and Lieutenant Morant of the Nizam's Regular troops have been cashiered for disobedience of orders. The latter officer once belonged to the 1st Royals.

MAJOR FITZROY STEPHEN, of the Rifle Brigade, will act as Military Secretary to the Hon'ble Sir Henry Norman, during the time the latter holds the office of President in Council, that is, from the 15th of this month to the 4th of December.

THE following has been issued by the Adjutant-General of the Madras Army :—Extract from Division Orders by Major-General Borton, C. B., Commanding Mysore Division. Bangalore, 15th September 1875.—Major-General Borton cannot resign the command of the Mysore Division, which he has held with so much satisfaction during the past five years, without placing on record the high sense which he entertains of the support which he has received, at all times, from the officers who have, from time to time, been placed in command of corps, and at the head of the several departments. He

more specially desires to convey his best thanks to those who are now serving under him. The duties of the Assistant Adjutant-General and Assistant Quartermaster-General have been performed with equal zeal and ability by Lieutenant-Colonel Arbuthnot and Lieutenant-Colonel Mesham. The Deputy Surgeons-General of both the British and Indian Medical Departments have been indefatigable in their exertions to maintain the health of the troops. The Commissariat and Barrack Departments have performed their duties most efficiently, and the officers commanding corps and batteries have exerted themselves so successfully to maintain discipline and promote the general efficiency of their men that His Excellency Sir F. P. Haines, the Commander-in-Chief, was pleased to express his marked approval of the state of the troops at his recent inspection of this garrison. Major-General Borton will always look back to the period of his command of the Mysore Division with unmixed satisfaction, and retain a lively interest in its welfare.

GENERAL.

A SHANGHAI paper says that the voyage to Europe from that port is now performed more rapidly by the way of San Francisco than by the Suez canal.

IT has been officially signified that H. R. H. the Prince of Wales will land at Aden and visit the town. Preparations are being made for His Royal Highness' reception.

THE betrothal is announced of Countess Mary Elizabeth Johanna, the only daughter of Prince Bismarck, to Count Wendt Zu Eulenburgh, a member of the Prussian Civil Service.

THE Aden correspondent of a Gujerati paper states that Brigadier-General Phayre, of Baroda celebrity, is named as a likely successor to Brigadier-General Schneider, who is shortly to retire.

A NOTIFICATION in the *Gazette of India* states that in future all vessels belonging to the Indian Government are to be designated "Indian Government Steamer" or "Ship." The prefix "Her Majesty's" is to be discontinued.

A PARSEE carpenter in the employ of the Messageries Imperiales Company at Aden was recently brought to book for having openly insulted the religious feelings of a Mussulman. The case was brought on four times before the First Assistant to the Political Resident, and the delinquent was fined Rs. 100 for the offence.

WE understand that Mr. G. Strettell, Deputy Conservator of Forests, has applied for two years' furlough to Europe to commence from January next. We have heard that Mr. Strettell, when in Europe, will devote a portion of his time to publishing a work on Burmah, and from his experience in the province and known ability, it should be worth reading.

THE rates of subscription to the Indian Service Family Pension Fund payable by native members of the Covenanted Medical Service are fixed by a Resolution in the Financial Department at an increase of five per cent on the rates paid by Europeans. The rule, however, will hold good only until the adoption of new tables, when some modification of it may be necessary.

THE accident to the P. and O. Company's Steamer *Deccan* will not involve any delay in the arrival of the Brindisi mail, which will be forwarded by a special Steamer from Suez on the 15th instant, and may therefore be expected to reach Bombay by the 27th. The *Deccan's* passengers and cargo will be brought on to Bombay by the *Pekin*, which left Southampton for that purpose on the 8th.

AN apparatus for wasting smoke, and so depriving it of its character of a nuisance, is in operation at a factory at Menilmomant, Paris. A fine shower of water travelling in the direction of the smoke, and at five times its velocity, is projected into the chimney, where it mixes with the smoke, taking up the soluble gases, and precipitating the impurities carried up with the smoke by the draught. The foul water is discharged into a cistern, where it is collected, and a fine black paint is got from it.

IT is being found that De la Bastie's glass, which is undoubtedly hardened by tempering, loses its molecular cohesion under a repetition of blows, and then fractures like ordinary glass. Tempered glass, submitted to hammering, presented an appearance on fracture similar to that of *fatigue* steel, a molecular disintegration having taken place. It is feared that this alteration of structure and loss of temper may not only follow from repeated shocks, but may happen spontaneously from interior change in the lapse of time.

AT Alexandra, Australia, a death has occurred under melancholy circumstances. Speaking of the deceased, an elderly man, named Smith, who died in a most miserable manner, the local paper says: "This wretched remnant of humanity was the Hon. John Spencer Smith, at one time Colonial Treasurer of Prince Edward's Island, his father being Governor at the same time. His uncle was Admiral Sir Sydney Smith. Mr. Smith, who was about 66 years of age, had the stamp of a man who had seen better days."

THE *Pall Mall*, alluding to Mr. Charles Mathews' approaching visit to India and to his recent acting in a play of his own composing called "My awful Dad," says: "Mr. Matthews is still without a rival upon the stage, and he plays the part of Mr. Adonis Evergreen in his happiest manner. His acting, indeed, differs little from what it has been for some years past. If here and there some decline of force or of volubility may be detected, the performance generally is surprising in its animation, humorousness, and power of entertaining. Hearty applause rewarded his efforts both as player and playwright."

A GERMAN inventor, Mr. Wm. F. Schroeder, of Baltimore, is said to have submitted on the 21st of last month to the New York Engineers' Association, a model of an air-ship, designed for carrying the mails between America and Europe. The air-ship is to be steered by a hydraulic apparatus of 8 horse power, and to be carried by a gas balloon. The ship weighs 2800 lb., and has a carrying capacity of 12,000 lb., its minimum rate of progress is estimated at seventy miles an hour. Experiments are now being made with it: should they be successful a proposal will be made to Congress to entrust the mail service to air-ships.

A RECENT resolution of the Governor-General in Council withdraws the restrictions hitherto imposed upon officers desirous of visiting Native States within the limits of India. His Excellency "considers it unnecessary to place any greater restrictions upon travelling in such states than upon travelling in British territory, except to direct that when officers of Government travelling in Native States move off the main lines of road, they shall in all cases send intimation to the Political Agent or other officer through whom correspondence with the Native States is usually conducted." Nothing in the resolution will, however, affect the special rules in force with regard to travelling in Cashmere, or to countries beyond the frontier, such as Afghanistan, Nepaul, Kashgar, and Thibet.

AMONGST the gifts that the Prince of Wales will bring to India will be a large quantity of scimitars, made in accordance with a design furnished by His Royal Highness, similar in pattern to the sword worn by him as Colonel of the 10th Hussars, and a large quantity of steel claymores, double express rifles, revolvers, and hunting knives. Each of the last named is about two pounds in weight. Amongst others from whom presents have been ordered are Messrs Wilkinson and Son, of Pall Mall, the military accoutrement makers, and the Messrs Henry of Edinburgh. The scimitars, which are only intended for persons of exalted rank, will have the following inscriptions engraved in embossed letters on the blade:—"H. R. H. the Prince of Wales, India, 1875-76." Beneath these words are placed the names and titles of the persons to whom the gifts are to be made, and as a general rule occupy a large space. The handles of these weapons are triumphs of mechanical art. They are of ivory with chasings of the finest gold.

ANOTHER claimant, styling himself variously Sir Roger Tichborne and Sir Roger Rayner Tichborne Aylmer, has been brought up at Marylebone Police court on the succinct and simple charge of being a lunatic, and sent accordingly to the Paddington workhouse. His great object in life appears to have been of late to announce himself as the long-lost baronet. To this end he wrote out a message to Mr. Disraeli, "I am here; Orton is not the man in prison. He must be released." Then another precious document was indited to the Prince and Princess of Wales. "I wait the pleasure of being introduced," wrote this lunatic, "to the future King and Queen and royal children of England;" while a third was addressed to the Queen. Curiously enough, however, the telegraph-clerk refused to despatch the messages without payment, and suggested that the baronet should be locked up; whereupon two cabmen—who had driven him about all day—several tradesmen, and an hotel-keeper or two, appeared on the scene as creditors only to find that they had been duped by a madman.

THE Mayor of Melbourne having allowed the Town Hall to be occupied on Sunday evenings for the purpose of sacred readings and organ recitals, the question has been raised as to whether such entertainments can be legally given. When the first recitals were announced, the Sabbath Observance Society waited as a deputation on the mayor to object to the proceeding on the grounds of impropriety and illegality. The mayor declined to entertain the former objection, and having been fortified by the opinions of Mr. Geo. Higinbotham and Mr. Ireland, Q. C., who held that the prohibitory law, which was called into requisition in the Brighton Aquarium case, did not extend to this colony, allowed matters to proceed. The Sabbath Observance Society has since obtained opinions from Mr. H. J. Wrixon and Mr. Holroyd, in opposition to those of Messrs. Higinbotham and Ireland, but no action has been taken to test the matter in the courts. The recitals have gone on, and have been attended each Sunday evening by large, respectable, and well-conducted audiences. The city council has been called upon to interfere, but that body has not yet been able to deal with the subject.

IF *La France* is to be believed, the Orleanist princes have made an adroit move, and entered a very possible bid for power. According to that journal, the Bourbons have decided to accept the definitive Republic, always excepting, of course, the half-witted hero of white flag and lilies, and have resolved to support it loyally. If this be true, the result may be tremendous. The declaration of Prince Jerome Napoleon for the Republic is not to be compared with it. He was believed to be a coward; he is known to have but little respect for principle, his ambition is guaged to its utmost extent, and he boasts a nickname which will stick to him to the end of time..."Plon-Plon." He never was dangerous; his followers could be counted on the fingers, and his opinions are as *bizarre* as were the ceilings and furniture of some of the rooms hard by the Tuileries which he so grotesquely furnished. But the Orleanists are in a very different position. The Duc D'Aumale has already presided over great State proceedings; he seems specially marked out—being childless—for the presidentship of a Republic, and he would have for his successor the well-known and much respected Comte de Paris. Is the dream of these new converts to Republicanism so wild as at first it seems?

LITERARY.

DR. ANDERSON is preparing an account of the two expeditions to Yunan, in the latter of which Mr. Margary was killed. The work, which will be published by Messrs. MacMillan and Co., will be profusely illustrated.

IT is stated that the gentlemen retained to write essays on music for the new edition of the "Encyclopædia Britannica" are Mr. William Chappell and Dr. Hueffer. The former will deal with the general history of music, the latter more especially with the theories of Herr Wagner.

ECCLESIASTICAL.

A PAPAL brief, hitherto kept secret, on the subject of the Austrian School Laws, has come to light and is causing a considerable sensation, inasmuch as the Pope in this document calls upon the Bishops to condemn those laws as hostile to the church while they were under the consideration of the Reichsrath, and advises that, as soon as they were established, they should be utililized as much as possible in the interests of the church.

THE installation of the Right Rev. Dr. Thornton as Bishop of Ballarat, took place on August 11th. The ceremony was performed at Christ Church, in the presence of a large proportion of the clergy of the diocese and a great number of the laity. An eloquent inaugural sermon was delivered by the bishop. In the evening a public meeting was held, at which addresses were presented to the bishop on behalf of the clergy and the laity of the diocese. His Excellency Sir William Stawell was present. On the 26th a tea-meeting was held in the Melbourne Town Hall to welcome the new bishop to the colony, at which upwards of 3,000 persons were present, On the 28th, Dr. Thornton was entertained at *dejeuner* at the Athenæum, by the clergy and laity of the diocese of Melbourne.

LATEST TELEGRAPHIC NEWS.

London, 8th October.

THE Admiralty has suspended the circular which was issued on 31st July, forbidding the reception of fugitive slaves on board Her Majesty's ships.

At the Municipal banquet given at Liverpool yesterday, Lord Derby made a speech, deprecating the unwise intermeddling, as well as the excessive indifference in Continental affairs, and declared England's great interest to be the maintenance of peace. Respecting the Herzegovinian insurrection, he said its importance was exaggerated. Leaders would meet with no support from the great Powers and autonomy of insurgent provinces was impracticable on account of difference of religion. Referring to China he said we have interests of our own to press the already extensive interests which may in course of time become incalculably great. He had hoped to have been able to bring news of the peaceable settlement of the Chinese difficulty, but this was not the case, as no decisive intelligence had been received; nevertheless he was hopeful that matters will go well and we must do our best to turn the present collision to good account and put our relations with China on a better footing for the future. He concluded by saying that our demands were moderate and trusted it was our intention to adhere to them.

London, 9th October

TURKISH default has produced great excitement on the Stock Exchange, and a heavy fall has taken place in the Turkish, Egyptian and Peruvian bonds.

It is stated that Sir Louis Mallet and Clement Colvin will shortly proceed to India on a mission connected with the India Tariffs' Bill.

Mr. B. H. Ellis has been gazetted a K. C. S. I.,

British exports for the past month amount to 19⅞ millions sterling, showing a decrease of 1⅛ millions. Imports amount to 30⅞ millions.

London, 11th October.

THE Heavy Mails which left Calcutta on 7th September arrived at Southampton on Saturday per P. and O. Steamer *Mirzapore.*

Discount :—The rate ruling in the open market is 2½ per cent. (the same as Bank rate).

The sum of £77,000 was withdrawn from the Bank of England to-day.

London, 11th October.

THE Prince of Wales started for Paris at eight to-night, being accompanied as far as Calais by the Princess of Wales, the Dukes of Edinburgh and Connaught.

London, 12th October.

THE *Serapis* has made a slow passage to Malta and a special first Engineer has gone to *Brindisi* to meet her and endeavour to increase her speed.

The Cape Ministry have summoned an extraordinary Session of Parliament to consider Lord Carnarvon's proposal to hold a conference for consideration of the scheme for confederation of the South-American States.

Transport *Malabar* has sailed for Bombay.

The French Government have ordered the formation of a territorial army, numbering 1,200,000 men.

London, 13th October.

THE Prince of Wales is now in Paris.

The Admiralty minute disagrees with the opinion expressed by the Court Martial on the late collision, that the loss of the *Vanguard* was attributable to the high rate of speed of the Squadron and considers the accident mainly due to the reduction of the speed of the *Vanguard* and the *Iron Duke's* improperly sheering out of the line. Lieutenant Evans has been dismissed from his ship and Captain Hickley is exonerated. The other findings are approved.

In the Cesarewitch race, Duke of Parma was first, Pageant second, and Perplexe third.

London, 14th October.

THE Prince of Wales left Paris last night.

The London Press disapproves of the late Admiralty's Minute regarding the collision of the *Iron Duke* and *Vanguard*; because it exonerates Vice-Admiral Tarleton and Captain Hickley from blame.

Constantinople, 9th October.

THE Decree issued by the Porte, respecting the public debt, takes effect immediately, and not from January. The guaranteeing Powers have recommended Servia to adopt a pacific policy, and withdraw her troops from the frontier, otherwise they will allow Turkey to occupy Servia.

Shanghai, 10th October.

THE *Pekin Gazette* publishes an edict, enjoining the proper treatment of the foreigners; but the main points of our demands, including punishment of the prepetrators of the Yunan outrage, still remain unsettled, moreover the prospects of a settlement are doubtful.

New York, 12th October.

THE Republican candidate has been elected Governor of Ohio thus signally defeating democratic inflationist. The result is important as indicating the future financial policy.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India,* and will be a complete record of what is being attempted for the improvement of the Agriculture of the country ; of its planting enterprise ; and the development of its mineral resources.

The subscription will be Rs. 12 *per year only, payable in advance.*

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S
ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S
ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA or UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

Great Indian Peninsula Railway.

VISIT OF HIS ROYAL HIGHNESS.

Notification.

REVENUE DEPARTMENT.

Dated the 21st August 1875.

MISCELLANEOUS.

THE following Tea Plantations in Kumaon, the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almorah, on Wednesday, the 1st December 1875, at noon:—

Hawalbagh.—Forty-six miles from the plains by bridle-road and six from Almorah. Area about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold: said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi River (suspension bridge) is a pine forest of one hundred and two acres belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price—Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridged, runs to: (1) Haldwani; (2) Kaladungi (*viâ* Naini-Tal); and, (3) Ramnagar (*viâ* Khyrna). From Haldwani to Bareilly Railway Station 60 miles over a *pucka* cart-road; from Kaladungi to Moradabad Railway Station 48 miles on partly *pucka* road; and from Ramnagur to Moradabad 45 miles *viâ* Kashipur, of which 25 miles more or less are a *kutcha* fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad. From Ramnagar up there is a cart-road (Kosi River not bridged) to Ranikhet 56 miles; and to the Hawalbagh plantation, where the Kosi River is being bridged, 19 miles.

1, 2, 3—markets at the foot of the hills.

Ayar Toly—In Kuttyur, consisting of about 2,546 acres, the area under tea was some years ago considerable. About 700 acres are cleared, and nearly 1,500 acres consist of jungle, of which part may be unculturable: a portion of the estate, named Binculi, 919 acres, is held under a perpetual lease from the Nagnath temple, at an annual rent of Rs. 24. There were on the estate a house, factory, godown, and numerous out-offices, all slated; but all these are in bad repair. Height of house above sea-level 5,200 feet, and the plaintation ranges from that height to 4,400 feet. Upset price—Rs. 17,000.

Communications.—To Hawalbagh 24 miles by bridle-road; thence as detailed under Hawalbagh.

These two estates will be put up to auction separately, at the upset prices named, and sold in fee simple to the highest bidder, free of all demands for land revenue, but subject to the rights already named in each case, and also to payment of customary cesses now in force or that may be imposed hereafter. Both estates have been surveyed, and maps may be seen at the District Office, Almorah. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st January 1876, when possession will be given: failing payment in full, the deposit will be forfeited and the estate resold.

By order of the Hon'ble the Lieutenant-Governor of the North-Western Provinces.

A. COLVIN,
Offg. Secy. to Govt., North-Western Provinces.

PRINCE OF WALES'S
ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No, 10 and 11 Park Street.

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,
Calcutta, 13th May 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, ESQ., C. E.,
Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary.
P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,
GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17th January 1874. *Secretary.*

Calcutta, 28th December 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

P. W. FLEURY & Co.,
No. 62, WELLESLEY STREET,
AND
No. 44, FREE SCHOOL STREET,
CALCUTTA.

NOTICE.

THE CENTRAL ASIAN TRADING COMPANY, besides having in view the development of British commerce with the countries beyond our frontier in India, are desirous of establishing in the Punjab, a warehouse upon the same principle as exists in London or any other large commercial city in Great Britain. Goods of every kind will be kept stocked in their warehouse at Peshawur for the purpose of enabling the English merchants of the Punjab, (or any other part of India,) to select goods wholesale on the same principle as they now receive from England. The Company's produce coming direct from the Manufacturer, must naturally offer advantages superior to what merchants so far inland are at present in the habit of receiving in dealing with Agents in England. The most favourable terms will be granted by the Company to merchants with whom they have business connections. The Company trust, by confining their business to wholesale transactions, that the European merchants of the Punjab (or any part of India) will appreciate their endeavours to open up a system of trade intercourse, which must eventually prove of immense benefit to the Company themselves, the retail merchants and the public generally.

The Company may not have the exact description of produce in stock, required by all the European firms with whom they hope to do business, they are however prepared to bring from England, without any delay, such goods as may be wanted provided the firm requiring the same will please to inform them of their probable yearly demands.

The Central Asian Trading Company offer the same inducement to the native traders of the Punjab *i. e.* to supply them with every thing they require in their daily business transactions. Every attention will be paid by the Company to the suggestions of native merchants in their dealings with the Company, so as gradually to introduce a system of trade intercourse which must prove profitable to all. The Company are prepared to receive barter in exchange for the produce of their warehouses, provided such produce is saleable either in the markets of India or Great Britain.

Mr. Thomas Russell, Manager of the Central Asian Trading Company, will feel happy at all times to grant information to any one desirous of doing business with the Company ; all letters should be addressed to Mr. T. Russell Manager Central Asian Trading Company, at Peshawur from 1st November to 30th March, and from 1st April to 31st October at Murree.

PROSPECTUS
CENTRAL ASIAN TRADING COMPANY "LIMITED"
CAPITAL £1,20,000

WITH POWER TO INCREASE.

In 12,000 *Shares of* £10, *or Rs.* 100 *Each.*

Managing Director
Pro. Tem
C. E. HERBERT, Esq.,
Manager T. RUSSEL Esq.,

As soon as a sufficient number of shares have been taken up a full Board of Directors will be elected :—

Bankers in the Punjab.		"The Punjab Bank Limited."
Do.	London.	"The Delhi and London Bank Limited."
Do.	Calcutta.	"The Delhi and London Bank Limited."
Do.	Bombay.	"The National Bank of India Limited."

AGENT, in England, George Holme, Esq., President
Derby Chamber, of Commerce.

AGENTS, in Bombay Messrs. Forbes & Co. | AGENTS, in Calcutta Messrs. Fitze & Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir and Affghanistan, as well as in the Punjab and will take over the good will, business, and property of the present Central Asian Trading Company, for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the state of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholders of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to take in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for Caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will be required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager C. A. T. Company.

Murree, September, 1875.

To

The Manager_____Bank Limited

Sir

I enclose Rs._____being on account of my first call of Rs. 10 for share on_____shares in the Central Asian Trading Company Limited, and I undertake to accept that number of shares, or any smaller number, that may be allotted to me.

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit*."—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	**£ 1,012,185**	**16 8**

FIRE BRICKS.

RANEEGUNGE FIRE BRICKS as supplied to Government and the various Railways, Iron Works, and Coal Gas and Steam Navigation Companies. Price—Rs. 9 per 100.

Extract from Official Report of tests made at H. M. Calcutta by THEODORE W. H. HUGHES, ESQ., F.G.S., A.R.S.M., Officiating Deputy Superintendent, Geological Survey, India.

"*The Fire Bricks tested by me were furnished by the Firm of Messrs. BURN & Co.*" * * * "*The materials from which they are made are very refractory and capable of resisting high temperature without sensibly fusing*" * * * "*That compared with Stourbridge Fire Bricks they are somewhat superior.*"

The specimens were subjected to a temperature of over 3,000 deg. Fht., the smelting point of Cast Iron being 2,786 deg. Fht.

Apply for the above and for Raneegunge Salt Glazed Stoneware imperishable Drainage Pipes to

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

W. NEWMAN & CO.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2119.] Calcutta: Saturday, October 23, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

NOTICE.

SO much regret has been expressed at the discontinuance of the *Indian Economist* and its Supplements, that Mr. Knight has determined to publish on the 1st December next, the first number of a new monthly journal of Indian Agriculture, Mineralogy, and Statistics, the prospectus of which will be found in our advertising columns. The circumstances under which the *Indian Economist* was discontinued have not been made public, and probably never will be. Suffice it to say, that the stoppage of the paper deprived the country of the only Agricultural, Industrial, and Statistical newspaper it possessed; and the new journal is designed to partially supply its place. The subscription will be Rs. 12 a year only, and Mr. Knight believes that he may count upon sufficient support, to warrant his announcing the publication without further delay. The new paper will be somewhat larger than the old *Agricultural Gazette of India*, and more comprehensive in its range, but will be strictly technical and in no way political or controversial. A limited space only will be allotted to advertisements.

EDITORIAL NOTES.

A CORRESPONDENT of a Bombay contemporary is assured that Mr. Sampson, late City editor of the *Times*, is actually at work as editor of the *Echo*, of which his particular friend, Albert Grant, is proprietor. The fortunate conjunction of two such financial luminaries ought to secure for the monetary views of the *Echo* the unlimited confidence of the British public.

***

WE shall not inflict on our readers a description of the *Serapis*, which doubtless those who are curious have read fully elsewhere. Suffice it to say that the vessel is fitted up magnificently and right royally, as probably no vessel ever was before, and contains among other things thirty-two tons of ice, an Erard piano, a histrionic corps, a troupe of Christy Minstrels, and the late Emperor Maximilian's cook as *chef de cuisine.*

***

M. THIERS, having been interviewed by one of the Editors of the *Temps*, declared that he is now in want of rest and that the hour of his retirement has struck. An unusually long and amazingly active public life may well justify his claim for a little rest and time to write his memoirs, but France has need of M. Thiers yet, and wants that he and M. Gambetta should combine to give stability to the republic before she will accept the veteran Statesman's "last legacy to the French people"—his autobiography.

***

THE *Indian Mirror*, writing regarding the appointment of Rajah Narendra Krishna as the new Native member of the Viceroy's Council, says:—The selection in the present instance is, we think, creditable to the judgment of Lord Northbrook, for Rajah Narendra Krishna unites an educated mind to a noble lineage. He belongs unquestionably to the most ancient Hindoo family of note in Calcutta—a family which has always been distinguished for its loyalty and public spirit. Rajah Narendra Krishna, we dare say, will do wel. in the Council, and maintain the reputation of the community he belongs to. To a mild and inoffensive disposition he adds highly-polished manners, and a modesty that cannot be surpassed. A good specimen of a Bengalee gentleman will be found in him It may be said that Rajah Narendra K[illegible]na has stepped to the Viceroy's Council *per saltum*, for he [illegible] not a member of the Bengal Council at any time, like Rajah Romanath Tagore.

***

THE worship of the Sacre-Cœur is, as our readers are aware, awakening an astonishing amount of enthusiasm among the adherents of Ultramontanism. France is, by devotion to the Sacred Heart, to be saved from the evils of centuries. The energy displayed by the priestly leaders in this movement is really extraordinary. The Catholics of England are asked, we see, to aid in the erection of a Church of the Sacred Heart at Gibraltar, by taking tickets in a gigantic lottery. The project is recommended as "a benevolent enterprise of extraordinary interest." The prizes are some of them of considerable value, and the committee undertake to send the prizes, except two statues, to winners at a distance. Considering that there are such prizes to be won as "a one-storied house, with stabling, coach-house (in all nineteen rooms) and garden with four wells," one can scarcely see the necessity for making special exceptions of the two statues. The agency that can transport the "four wells" might also undertake the safe transport of the statues.

***

THE enquiry into the loss of the *Vanguard* seems to have brought to light with startling plainness the fact that in naval architecture as in some other directions science has been going ahead faster than poor common sense was able to follow. The tremendous strength and destructive power of our iron-clad fleet could hardly be exaggerated, but while our naval weapons have been constructed with the greatest scientific genius and on such a costly and gigantic scale, the most ordinary precautions to prevent them from demolishing each other instead of an enemy have been neglected. The officers of the fleet have exhibited the most marvellous ignorance and uncertainty as to the steps that ought to be taken by those in command of the different vessels in the case of a fog, when they have lost sight of each other and are cut off from the orders of the flag-ship. If the lesson conveyed in such emphatic terms be rightly learned a little more cautious prudence and plain common sense will in future be combined with energy and scientific skill in matters of such tremendous national importance.

***

IT has been suggested to us that the loyalty of our wealthy citizens could not be more usefully and appropriately exhibited than in the purchase of a Grand Organ, to be placed in the Town Hall in commemoration of the auspicious visit of the Prince of Wales. The Town Hall sadly wants an organ to drown the clamour of our Justices, and to introduce a little harmony into our Municipal Assemblies; and we see no reason why we should not follow the example of Bombay, the Town Hall of which city owes its Grand Organ to the visit of the Duke of Edinburgh. Apart from its strictly municipal uses, such an instrument would add considerably to the *éclat* of public banquets, and be advantageously employed in cutting short over-long after-dinner orations about Sir William Wallace, Sir Richard Temple, *et hoc genus omne.* We hope that in the interests of the city some of our citizens will take up the matter, and thus associate their names with a far more pleasant and profitable, as well as permanent, exhibition of loyalty than lamp-oil and crackers can be said to be.

***

OFFICIALISM is very much alike all over the world, and it is a blessing for England that its occasional vagaries in that country are in most cases, speedily exposed in the public press, and, if need be,

discussed and corrected in Parliament. We hear of a remarkable set of rules recently published by the Admiralty as a guide to naval officers in their dealings with slave ships and with slaves that may seek a refuge under the British flag. If a slave loses his shackles if he but touch our country or breathe English air, as our poet says and our people boast, the Admiralty have resolved that a like result shall not follow his stepping on the deck of a British man-of-war. It was always understood that the British flag could not wave over a slave, but the Admiralty understands that, not in the sense that the slave by coming underneath that flag becomes a free man, but in the sense that he must be handed over to bondage as soon as it has been proved to the satisfaction of the officer in command that he *is* legally a slave. We thought that was a sort of legality which Britain had ceased to recognize, and we shall probably hear more of his new set of rules before long.

***

A TELEGRAM to a contemporary states that "at the instance of the Bombay Government, the Allahabad District Charitable Society has been warned against too free a grant of railway passes to poor Europeans seeking employment."

We fear the warning has been quite thrown away on those to whom it was addressed. It is always difficult to reconcile utterly conflicting interests. Allahabad grants the free passes in order to transfer to other stations the responsibility of maintaining the poor men out of employ, and will probably continue to do so in spite of the objection of those other stations to entertain or pass on the unwelcome visitors. It may be said, to the credit of Allahabad, that it deals far more liberally with poor whites than many other stations do; but that is no reason why it should be called upon to relieve all other localities of their Christian duties by retaining for an indefinite period all the stray seekers after employment who may find their way to that great railway centre from all parts of India. If the Bombay workhouse is getting too full, the Government has the remedy in its own hands.

***

A CORRESPONDENT informs us that Tennyson has added some scenes to his drama of *Queen Mary* to make it fitter for stage representation. Something of the kind was certainly necessary, for there is a manifest lack of vivacious dialogue throughout the play. We trust he has been able to infuse a little more of the *vis vivida* into it. A few scenes of a more private character, and less purely historical incidents, would greatly add to its interest. In his painful effort to represent history accurately, according to his own conception of it, he has almost lost the poet in the pictorial historian. The omission of nearly all the fourth Act, containing the last hours of Cranmer, will give scope for the introduction of some scenes that may greatly help the play on the stage. But a still wiser course for Tennyson would have been to shun representation on the stage entirely. As a closet study, the drama possesses a great deal of merit, but as a stage play, although the name of the author, and the acting of Irving and Miss Bateman may give it a short run of success, we cannot hope that its success will be either real or permanent.

***

THE *Lucknow Witness* throws the light of its recent reading upon the signification of the word "peg" as colloquially used in India. From a letter written by Henry Lyman, a young Missionary from Massachusetts, who was killed in Sumatra in 1834, the following quotation is given: "Formerly it (intoxicating liquor) was so pernicious in its effects at Padang that it received the Malay name *pakoe* (nail) because the people said 'it drove one more nail into a man's coffin.' You might hear them call to their servants 'Bring me the red nail' or 'Bring me the white nail.'" Our word 'peg' is, we are to infer, a corruption of *pakoe*, and has a very sinister signification indeed. We hope a more innocent derivation may be found for it. It is a pity if it cannot be explained as pleasantly as the common saying about 'taking a man down a peg' has been explained by the customs of our Scandinavian ancestors. The old Norsemen are said to have had their wooden goblets marked off into draughts by pegs driven in at equal distances down the side of the vessel. The distance between two pegs was supposed to measure off sufficient liquor to be quaffed without taking the tankard from the lips, and a man might thus drink peg after peg. A man who drained his liquor to a lower peg than had been reached by his boon companion laid his companion under obligation to imitate him, and was said to have taken him down a peg. There is a curious coincidence between this expression and our Indian peg, but perhaps no real connection.

WE extract the following from an interesting notice of the death of the Rev. John Sale of Burrisal, from the *Freeman*: "For the last quarter of a century he has been one of the foremost missionaries in Bengal. Sent out by the Baptist Missionary Society to Calcutta, he at once gave himself to the study of the Bengalee language and people with a zeal and a success which were the source of his subsequent influence with both the natives and the authorities. He was long stationed in the rural districts of Backergunge, where, with others, he was privileged to gather in a large body of converts and build up the native church of Burrisal. Such was his familliarity with agrarian questions, and such his almost judicial wisdom, that when the indigo disturbances between the planters and the ryots or peasant proprietors broke out in 1860, Lord Canning and Sir John Peter Grant appointed him the only missionary member of the commission which investigated the question. Year after year, sometimes among the educated Hindoos of Calcutta, but more continuously among the humble peasantry of Bengal, the late Mr. Sale laboured for his Master in season and out of season, in the spirit of Carey, the founder of the mission. His wife, a lady who spent some of her early years in the household of the late Duchess of Kent, the mother of our Queen, by whom she was held in high estimation, was no less zealous and energetic in her efforts to educate the Hindoo ladies of the city or district in which her husband was stationed. Indeed, no one has done more for that *zenana* work in which so many high hopes are now centred. Last year Mr. Sale was compelled to take sick leave.

***

AMERICA, while producing a plentiful crop of "girl graduates," can produce heroines of another description which never fails to awaken genuine admiration. The New York papers contain an interesting account of Ida Lewis, a young lady who has well earned the title of the Grace Darling of America. Ida's father is keeper of Lime Rock Lighthouse, Rhode Island. She first became an object of public admiration nine years ago, by saving the life of a soldier who, by venturing out in a light skiff on one of the most blustering days ever known in those latitudes, had put his life in imminent peril, and would certainly have been drowned had not the keeper's daughter bravely risked her own life among the surges and saved the man. In the following year she saved the lives of two men who, during a terrible gale, were trying to cross the harbour with several sheep. Again the keeper's daughter came to the rescue when the craft was nigh perishing, and carried both men and sheep safely ashore. Her most heroic adventure was in 1869. Two young soldiers were sailing from Newport to Fort Adams in a small boat guided by a boy, when a squall upset the little craft and the boy was drowned. The soldiers clung to the wreck and, Mrs. Lewis having beheld the accident from the lighthouse, Ida, though unwell at the time, launched the life-boat and without hat or shoes sailed forth to the rescue and was successful. She has just added another rose to her chaplet by the rescue of one of three men who were capsized from a boat, the other men being saved by another boat which put out from the shore. Such shining examples of feminine heroism deserve to be recorded.

***

IF one result of the visit of the Prince of Wales to India should be, as the *Overland Mail* suggests, an appreciable acceleration of the Indian mails, at least one small blessing will remain to pleasantly remind the Anglo-Indian community of the visit, when all the rockets shall have blazed to heaven and all the Specials gone to their own place. But if acceleration be becoming a press topic again, why should not cheapening be a companion topic? Surely if the communities here and at home were to speak at once and with proper earnestness some concession might be made to a demand so reasonable from a public that has borne this grievance long and patiently A ray of hope on the postage question came along with the last mail. Last month a memorial from the Council of the East India Association was forwarded to the Postmaster-General, representing the increased advantages which would far more than counterbalance the slight pecuniary loss that would arise from a considerable cheapening of the postal rates between Great Britain and India and her other colonies. "While a letter, newspaper, and postage card can now be sent from Moscow to San Francisco, or from Great Britain to Egypt, Suez, America, and Africa, for 2½*d*, 1*d*. and 1½*d*. respectively, the cost to India remains at 12*d* for letters, and 3*d* for newspapers, while it is altogether denied the advantage of post cards." The absurdity is too glaring, and must be removed. The Postmaster-General directed a reply to be sent to Sir Charles Wingfield, the Vice-Chairman of the Council, to the effect, that with a view to a reduction of the postage on correspondence to and from India it was being considered whether it would be desirable for India to

become a party to the General Postal Union. We trust consideration will be brief, and action speedy.

***

It is now abundantly evident that the Scotch Church Patronage Act has proved a complete failure, if, as was certainly the case, its promoters looked for any large immediate results. It was a case of shutting the cage after the bird had flown, or rather a removing of a grievance which if done in time might have prevented the bird from taking flight, but which is utterly powerless to allure the bird back after it has tasted the sweets of freedom and independence. Outsiders were always unwilling to believe the Free Church, when it protested that patronage was not the real grievance that caused the *Disruption*, and many English and not a few Scotch people anticipated a flocking back of ministers and congregation, and something like a union of the Presbyterian Churches to follow the passing of the Act. To such it must appear remarkable that up to the present time not a single pastor nor a single congregation has returned to the bosom of the Church of their fathers, and the division remains as complete, and has as much appearance of permanence, as before the Bill was proposed. The truth seems even to be that the Scotch Free Church claims to be itself the true representative of the ancient Scottish Church, and is not to be won back to the land of captivity by any promise that the old iron fetters having been eaten through with rust have been broken to pieces. While Statesmen are seriously asking the question, whether the existing establishments are worth preserving, it is manifest that the bodies which have broken loose from State control shew no inclination to accept again its trammels along with its advantages. That such advantages are great, and in a society nearer to our ideal would be far greater, we have no doubt, but we are bound to mark the tendencies of the times we live in, and we almost fear that the time for correcting the abuse of church establishments is fast going by.

***

The Parliamentary celebrities who are enjoying in the provinces the annual oratorical dissipation which the recess brings them have with wonderful unanimity chosen education, in one or other of its aspects, as the main topic on which to harangue their applausive audiences. The Marquis of Harlington said a few sensible things at Nottingham with reference to the late praiseworthy movement for the extension of university education, which has been initiated by the University of Cambridge and of which Nottingham has been the first to take advantage. His remarks—at least the spirit of them—apply more fully in India than in England, though they are too applicable even there. He pointed out that while these admirable efforts were being made to extend more fully to all the large towns of England the advantages of university education, a wide primary system had only just been initiated and was scarcely past the experimental stage, while secondary education—putting aside a few excellent schools—could hardly be said to exist, and where it did exist was lamentably defective. He was afraid that a superstructure of university education was being raised upon a frail, if not rotten, foundation of inferior middle schools.

We rejoice to see, from recent reports, that the primary system established in England, though not yet fully developed, has not been unfruitful and bears rich buds of promise. By and by the compulsory method of securing attendance will, we doubt not, be universally applied, and if so we shall find young England some years hence vastly improved, we trust, as compared with our recollection of it. Given a thorough and fully comprehensive primary system, an improved secondary education will of necessity follow. In India we have made one of the most remarkable attempts the world has witnessed to build a national structure from the top downwards, and are only just opening our eyes to the fact that there are such things as natural laws that will not tolerate such undertakings. Our rulers must recognise more practically than they have yet done the necessity of looking to the base of our educational system rather than to the cupolas and minarets. The structure is at present ominously giddy and shaky, and it is not wonderful that it should be so.

***

Readers of the English journals have had a course of feasting upon horrors such as seldom falls to their lot, but is apparently devoured with a relish that shews that we have not yet, in the course of our development upwards, succeeded in "working out the beast." It is strange that hundreds and thousands of people, most of whom would probably shrink away with horror from the spectacle of a man in a deserted warehouse grimly hacking to pieces the corpse of a murdered woman newly dug from the grave, should yet glut their morbid imaginations for days and weeks with minute descriptions of the deed, and all attainable information and ingenious speculation about the perpetrator and his victim. The hideous fascination that such revolting details exercise on the vulgar mind is a proof of the abysmal depths of ferocity that lie deep down in human nature and that civilisation covers over and suppresses, but has not annihilated. It might seem ungenerous to say that a person who can allow his mind to dwell with interest on a picture like that furnished by the Wainwright tragedy, longer than is necessary to apprehend the leading facts, is capable of being transformed, or perhaps we should say developed, into a Wainwright, and yet that is the conclusion to which a close study of this sad phase of human nature seems to point. The fondness for the horrible is more strikingly evident in this case because, as has been pointed out, the public imagination is mainly occupied not with the murder, which was the real crime, but with the mutilation, which was not performed till the body had been interred for a year, and had apparently become a simple necessity unless the man had been prepared to give himself up to justice. It is easy to blame the newspaper press for ministering to the morbid craving in the public mind for such disgusting stimulants, but it is a very difficult problem to work out to shew how the papers can avoid doing so. We do not believe that the supply creates the demand so much as the demand creates the supply. In the days when newspapers were far fewer and less read than now, Newgate Calendars and other black records were sought after by those of the multitude who could read them, and devoured with a keener zest on account of their rarity. Yet we are far from saying that respectable newspapers should not do all they can to discourage this taste which is so much to be deplored.

***

It is to be regretted that France has sent a note to Turkey, protesting against the default in payment of coupons; and that other Powers contemplate similar representations. It is only by practically convincing the too gullible public of the utter folly of lending money to bankrupt States, that the evil can be put a stop to. It is certainly the interest of every civilized State that the subjects of the State should not be swindled wholesale by foreigners; for the wholesale ruin of individuals indirectly impoverishes the State to which they belong. But in these matters prevention is much better than cure. Prove to people in general that ruin *must* result from loans to bankrupt States, and the evil will cease forthwith. But if you encourage people to hope that the State will step in to protect them against the natural consequences of their own folly and imprudence, you induce them to go on lending. For, as long as there is any element of hope in such transactions, many will persist in seeking the best return for their investment of capital. Apart from ordinary speculators, who are entitled to no pity or protection at all, there are, in these high pressure days of civilization, thousands upon thousands of poor persons—widows and orphans for instance—who live upon incomes derived from a very small capital to which they have no means of adding anything by their labours. The capital is often so small that the income from it, at safe rates of interest, is insufficient to provide what are looked upon as the absolute necessaries of life; and, so long as the loss of capital and interest together is not a certainty, such sorely straitened persons can hardly help investing in loans which appear to secure to them incomes sufficient for their wants. Of course, when utterly ruined, they will confess that it is better to have half a loaf than no bread at all, but it is then too late; and people of this kind, sorely tempted as they are by poverty, are entitled to a modicum of pity; and that pity should take the form of removing from them the temptation of procuring more than the half loaf by proving to them, beyond a shadow of doubt, that the end of their investments will be no bread at all. To effect this desirable object, no State should interfere with the collapse of Turkish credit. Some of course must suffer, but examples are needed to keep others from the path of ruin; and the sooner the few are made examples of for the benefit of the many of the future, the sooner will society at large revert to the old plan of living by the sweat of the brow, or on an income derived from money safely invested on sound security.

***

The income derived from the sale of stamps may fairly be considered one of the most expansive branches of the public revenue. It has more than trebled during the last fifteen years, and the report of the Board of Revenue on this department for 1874-75 shows that its growth is still as rapid as ever. During the year under review, the amount collected was Rs. 1,65,99,650, or Rs. 6,78,962 more than in 1873-74. All the provinces and administrations supplied by the

Stamp Office in Calcutta, with the single exception of the North-Western Provinces, have contributed more or less to this increase, and the gratifying consequence is that, notwithstanding the greater cost of administration, the net revenue exhibits a considerable improvement, being Rs. 79,05,699 as against Rs. 73,39,991 in 1873-74, and Rs. 70,50,358 in 1872-73.

By far the larger proportion of the increase is, however, due to the sale of judicial stamps. Non-judicial stamps of all kinds show an increase of only Rs. 59,834, or Rs. 2-4 per cent. over the last year. In a resolution published in the *Gazette* of the 13th instant, the Lieutenant-Governor of Bengal calls the attention of the Board to this disparity, and remarks that district officers should show greater strictness in enforcing the provisions of the Stamp Act. Evasions of the law are, he thinks, far too common, and the slow growth of the revenue from general stamps is attributable to them. He quotes a strong instance from the report.

"A money-lender in the district of Tipperah was shown to have been in the habit of advancing money without drawing up any formal bond, but by entering the particulars of each loan on a separate sheet of his ledger, and taking the signatures of the borrower and witnesses to each transaction. Each leaf of the book was thus virtually an unstamped bond, and when it was necessary to proceed against any borrower a leaf was removed and filed in the civil court in support of the claim."

Amongst the banking and money-lending classes such stratagems are probably far from rare, and as in ninety-nine cases out of a hundred they wholly escape detection, the consequent loss of revenue must be very considerable. The Lieutenant-Governor is not, it seems, disposed any longer to submit to this loss, and expresses his intention of applying to the legislature to vest the executive with greater power to enforce the use of stamps in cases where they are required, unless the existing law shall, on being carried out with more vigilance than of late, prove to be sufficiently stringent.

***

THE Prince of Wales is at last on his journey to India. Before he set out he seems already to have experienced the pleasure of being looked upon as something of a hero. We can all, in our small way, remember the time when we were objects of extraordinary interest at home, because we were on the eve of setting out for this eastern wonderland. It has fallen to the lot of the Prince to do a thing unparalleled among the achievements of British Princes—not a very heroic thing perhaps, but novel and remarkable, and an exploit that may be fruitful of important issues. No wonder that people at home seem to have crowded round him wherever he made a public appearance shortly before leaving, with an interest warmer than it has been usual to manifest for some years, except perhaps on his convalescence some years ago. His journey south from Balmoral—where bye the bye he began his adventures by nearly getting lost among the heather—afforded opportunities for the gentry here and there to meet him where the train had occasion to stop, and bid him good speed. There really seems to have been a considerable amount of fine hearty loyalism displayed at home before his departure, which we take as a good omen, and hope that when he arrives he may "win golden opinions from all sorts of people" in India. He will of course be greatly lionized after he reaches the little island again, when we shall be summing up the cost, and beginning to look for the permanent good fruits of the visit. The *Telegraph* laments that "the Prince's travelling staff includes no men capable of explaining to him, stage after stage, the real import of all the varieties of life, and the fair opulence of nature which he will pass in journeying. Surely there were those at home and abroad—men like Wilson, Forbes, Watson, and Birdwood in economic sciences, or like Griffith of Benares, and Max Muller in Ayran literature—scholars, administrators and ethnologists of renown and science—from whose illustrious ranks really profitable companions might have been chosen for this serious expedition." Evidently if the *Telegraph* had been consulted as to the arrangements, the expedition would have been made a serious one indeed for the poor Prince. Ethnological, philological and economic lectures, superadded to all the blazing, rocketing, salaaming, durbaring, and elephant-shooting, and all the novelties that will attack all his senses daily and simultaneously, would have been a little too much for the most patient and placid of Princes. Probably the chosen companions will be able to ply the Prince with as much valuable information in the way of description and elucidation as he will be well able to carry home with him, and he may study Max Muller and the others till next dog-days if he feels disposed.

RUSSIA, CEYLON, AND BENGAL.

IN a recent issue, we referred to the completeness and success with which the village system has been restored in Russia. The present Czar, taking the opportunity afforded by the emancipation of the serfs, adopted in its entirety the communal system, and each Russian township is now a dependent republic, possessing supreme authority over its own members, and responsible as a whole for the landlord's rent, the imperial taxes, and the quota of recruits required from it by the minister of war. This change is generally supposed to have prevented the social anarchy which might otherwise have resulted from the destruction of the power of the nobles; and to have contributed not a little to the increase in the strength of the country and the popularity of the Government. It can, however, hardly be considered as affording an example for our guidance, as we are not placed in the same circumstances. We have not to reconstruct in India a society founded on an institution so bad as that of serfdom. It is therefore with pleasure that we read Mr. Digby's account of the introduction of the village system in a country which more closely resembles our own, *viz.*, the island of Ceylon, a province which is a part of India in every respect but this, that it is governed from the Colonial instead of the India Office. This case affords a precedent bearing directly on the point. It shows how an English Statesman may act, when endeavouring to give self-government to natives of Indian descent, and what results may be expected from his measures.

Ceylon has long been remarkable for the litigious spirit of its inhabitants. In the year 1869, one hundred and sixty eight thousand natives were brought before the magistrates on various criminal charges, which is to say that one-thirteenth of the whole population was on its trial. Of the accused, only one-tenth were convicted. The district judge of Colombo calculates that the number of those who annually attend the courts, civil and criminal, either as prosecutors, defendants, or witnesses is equal to that of the whole civil population. This excessive amount of lawyer's work was found to interfere with agriculture, and was the first of the evils which led to the introduction of the new law. Again, great difficulty was found in keeping the village works in repair. A Ceylon hamlet is always formed round a tank, on the waters of which the cultivators depend for irrigation. Formerly these tanks were kept up by the forced labour of the ryots, every one having to work for the common good. In time, the custom fell into disuse, and with it the water-supply failed. The Government was also anxious to introduce a system of primary education, and found great difficulty in getting children to attend the schools, and in raising rates for the purpose. These considerations were laid before Mr. Gregory when he assumed the government of the island. He is a Galway man, and has for many years represented his native country in Parliament, and possibly the experience gained by him in the west of Ireland had some influence on his policy. However that may be, he resolved to solve all three questions by one measure, and in 1871 he passed the Act introducing local self-government.

The law provides for the election in each village of a committee called a *gansabhama*, and sometimes by the familiar name of a *punchayat*. Every adult male resident has a vote, but a property qualification of twenty pounds realty is required in candidates for office. The committee-men retain power for three years, and may be re-elected. Their principal functions must be called legislative. They have the right to make binding rules for all purposes connected with, or relating to purely village affairs; and among the subjects particularly specified, are "the construction of village works, the care of waste lands, the rights of fishery, education, and the enforcement of ancient customs." In fact no Irish home-ruler has asked for greater powers than are given to these local bodies, except that their proceedings are subject to a Government veto, and that they are not binding on European or Eurasian residents. Acting under this law, the villagers have generally made a rule that when the *tom-tom* is beaten by authority, all cultivators shall assemble to execute the prescribed communal works on the tank, or the village roads. They have built schools where Government has provided the school-master, and, with a daring not to be found in

those who have to make laws for larger districts, have in many places made education compulsory. In some villages, the rule is that all boys between the ages of six and fifteen, all girls between six and twelve, shall attend school regularly, under a penalty of a fine of one rupee on their parents. In others, fathers who neglect to educate their children are declared ineligible for Government or village employ. And these regulations are said to be rigidly enforced. The number of taverns has been reduced to a minimum.

The village *punchayat* however does not, as in Russia, constitute the village tribunal. The power of trying cases is vested in a paid officer of Government, called a president, assisted by assessors from the committee. The president is a native, who goes his circuit, but has no pretence to the rank of a judge or magistrate. It seems that his decision is really controlled by the opinion of the villagers. He has jurisdiction in civil cases not valued at more than Rs. 100, and in criminal charges of petty theft, assault, mischief, trespass, and the like. No lawyer or advocate of any kind is permitted to appear in these local courts, which are by law directed to act summarily, and without form. The fact that a paid officer presides, and is entitled to decide against the opinion of his colleagues, distinguishes them from the real *punchayat*, but it appears that in practice there is no great distinction between them. Disputes are settled according to the local idea of their merits, not merely on evidence weighed by a stranger. In the long run, the representatives chosen by the villagers control the judicial as well as the legislative authority. It is difficult for us to satisfy ourselves as to how these extensive changes have worked. But it is certain that the local officials attribute to them the best results. Having first tried the system in a few selected villages, they were so pleased with the effect produced that they extended the law far and wide over the island. And now they declare themselves entirely satisfied. Judges, Government agents, legislators —all agree that the plan has been a complete success. The rules made are reasonable in themselves, and are strictly enforced. There are few appeals from the village tribunals, and their decisions when questioned are generally upheld. The natives are glad to find themselves once again in possession of power, while roads are being made and schools built by the voluntary agency of the people themselves.

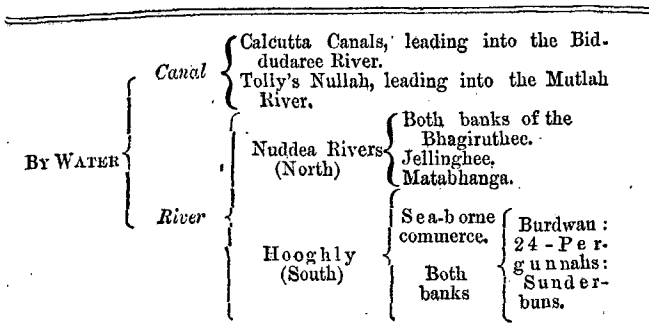
It seems that India cannot escape the effect of the reaction of opinion in favor of village government, which has swept through our great rival on the north and our little neighbour on the south. In Bengal, more especially, some measure of this kind would seem to be absolutely required. We formerly supposed that the internal government of the country would be carried on by the zemindars, as in the last century the English county was managed by its esquires. Relying on this hope, we passed many Acts making the landholder responsible for the apprehension of thieves, the due reporting of crime, and other such public duties. It has long since become evident that in this we were misled by a European analogy. The zemindars do not and cannot govern the country. Each estate belongs not to an individual but to a family of sharers, including, as a rule, many women and not a few children. The most influential members of this community reside in Calcutta or Benares, far away from their property. They know and care nothing for agriculture or for good government, and confine their attention to securing the regular payment of their rents, and such enhancement of the same as they can obtain from year to year. They belong to the higher castes and to the Hindoo creed, and do not interest themselves in the affairs of the lower orders. We have now ceased to expect anything from them in this respect. But while their authority has disappeared, it has not been replaced. We are in the position in which Russia would have found itself, had it not revived the village system when it broke the power of the nobles. We found when we came into the country, that the Government tax-gatherers had destroyed the autonomy of the village communities. We converted these tax-gatherers into landlords, and their influence disappeared. And now in rural Bengal, there is no native authority. External order is preserved by the magistrate and his police, but moral order has disappeared and proof of this fact is to be found in the sudden and rapid growth in the number of complaints of offences against the marriage laws, such as the enticing away of married women. These have risen from hundreds to thousands, and they are still on the increase.

It is well known that Sir George Campbell, when Lieutenant-Governor of Bengal, passed an Act giving power to Government to create village municipalities, not unlike those of Ceylon. He and his staff and council took the greatest pains with the details of the measure, and it is a monument of labour and ingenuity. Had Lord Mayo's life been spared, it would now, in all human probability, have been the law of the land; and we should at this moment have been engaged in the honorable and useful task of introducing self-government in Bengal. No act of Lord Northbrook's administration appears to us to have been more unwise than that by which he vetoed that Bill. True, he was applauded by the Bengal zemindars, who were delighted to see Sir George Campbell mortified by the failure of his measure, and who had nothing to gain by the increased independence of their ryots. In Ceylon, too, the upper class of natives opposed Mr. Gregory's law, and violently protested against it. But a system required by the particular state of the country, and approved by universal experience, should not be rejected because opposed by a class. The interest of the villagers has not been altogether neglected by the government of Sir Richard Temple, in spite of the discouragement which results from such a blow. An Act was passed in Sir William Grey's time giving the Lieutenant-Governor the right to create in any village a *punchayat*, charged with the duty of appointing and contracting the watchman and paying his dues. It was tentatively applied in a few villages, and doubtful or contradictory reports were received as to its working. Sir Richard is now rapidly extending the operation of the law to every part of Bengal. This is certainly a movement in the right direction. If the members of the present unofficial *punchayats*, which decide petty disputes, be appointed to the new body, they will receive the benefit of Government acceptance, and of some small legal powers. This must add, however slightly, to the authority which they previously possessed; and it is now for the first time that the Bengal village is acknowledged as a unit, a body possessing common duties. When we compare such acts to those of Russia and Ceylon they seem as nothing, and we feel ashamed to think how much we have fallen behind them in the power of social organization. But when we reflect that they are the first signs of the commencement of a new policy they appear in a more favorable light. Among a conquered people, and in a great empire, public spirit and political life can be maintained only by local self-government. The Judge of the Roman municipality, the independence of the Tartar village, give to the subjects of an intelligent Government some of the blessings of free citizens. They may be and should be introduced into this country with all possible speed.

RIVER AND CANAL TRAFFIC: BENGAL.

AN observant man may pass a life-time in Calcutta, without getting a clear idea of the exact channels through which the city receives the rich and varied produce of which it is the emporium, and the vast supplies of food required for its own maintenance. The great channels by which this produce is ceaselessly pouring into the city day and night at all seasons, and by which it sends forth its vast stream of exports, northwards and southwards and eastwards and westwards, fall naturally under the two great divisions of land and water. By land, the vast streams of traffic pouring into the city and out of it are the following :—

- By Land
  - *Railway*
    - East India Railway at Howrah
      - Loop Line along the Ganges.
      - Chord Line through the coal-fields of Burdwan to the North-West.
    - Eastern Bengal Railway at Sealdah
    - South-Eastern Railway at Sealdah (to Port Canning, 30 miles).
  - *Road*
    - Hooghly Bridge, Grand Trunk Road.
    - Dum-Dum Grand Trunk Road.
    - Diamond Harbour Road.



The traffic that flows into Calcutta comes to it partly for export, and partly for the maintenance of the immense population of the city and its suburbs, while the traffic that leaves it consists almost entirely of goods imported from abroad, for the requirements of the vast districts that supply themselves with foreign goods through this port. The great channels by which the city receives its imports are noted above. From the south, it receives by the river all the sea-borne commerce of the world directed to Bengal: the vast supplies of food that fall into the river from Midnapore and Orissa: and all the coasting traffic of India that enters Bengal thereby. On the North-West, the great channel of receipt is the East Indian Railway, in addition to which there is a considerable import from the direct west by native boats bringing goods from the ghats of the Burdwan division along the western bank of the river: and a small amount of traffic by road across the Hooghly Bridge. On the north and north-east, the great channels of supply are the Nuddea Rivers in the wet season, and the Eastern Bengal Railway at all seasons; and on the east and south-east, the system of canals that connects the city with the Eastern districts and with the Sunderbuns. All the traffic that reaches the city comes into it by railway or river through one or other of these channels.

We may ascertain the amount of the traffic in two ways: (1) by estimating the annual consumption that takes place within the city itself, and adding thereto the amount that is annually exported; or (2) by adding the registered imports and exports together. The traffic on the Calcutta and Eastern Canals which connect the city with the Sunderbuns, Backergunge, parts of Jessore, and the country about the Megna river, is registered at toll stations a little outside the city: and the registry shows the traffic that passes between Calcutta and these districts by water. Tolly's Nullah and the Eastern Canals connect the Hooghly with the Mutlah. An immense trade is carried on by them between Calcutta and the Eastern Districts and Sunderbuns at *all* seasons of the year; and in the dry season, when the Nuddea rivers are impassable, the whole of the Ganges traffic from Behar, Bhagulpore, and Rajshahye finds its way to Calcutta by the same route. This traffic consists mainly of oil seeds, wheat, pulse, and rice, and as it cannot flow down the Bhagiruttee it is diverted by Kooshtea down the Gorai river, and thence finds its way by the Eastern Canals into the city.

The entrance to Tolly's Nullah from the Mutlah is at Samookpottah, and the nullah flows thence a distance of about 15 miles north-west to Kidderpore, where it falls into the Hooghly. There is a toll station at each end, at Kidderpore and Samookpottah, and an intermediate toll station at Russah, where the Kamrapooker Khal or creek falls into the nullah. The entrance into the Circular Canal from the river is at Chitpore. The canal is held to terminate at Bamanghatta, where it flows into the great Eastern Canals which drain the Eastern districts and the Sunderbuns of their produce. The Calcutta canals fall finally into the Biddaduree River. There is a toll station at each end, at Chitpore and Bamanghatta, and another at Rajah's Khall on the lake channel. We may mention here in passing that the grain known as table rice is grown in the districts near Diamond Harbour, and comes up the Kamrapooker Khal to Russah, where the creek enters Tolly's Nullah. The quantity annually brought up this creek is about 12,70,000 maunds (47,000 tons) a year. It is all landed at Chitlah, a place opposite the famous Kallighaut Temple on Tolly's Nullah. Kallighaut is the most holy shrine near Calcutta, and is said to have been erected 200 years before the English came to India. Calcutta is supposed to derive its name from this ghaut.

The Bhagiruttee, Jellinghee and Matabhanga known as the Nuddea rivers are all offshoots of the Pudda, or main channel of the Ganges. The Jellinghee branches from the Pudda at the point where that river reaches the Nuddea district, and flowing in a south-westerly direction past the town of Krishnaghur, falls into the Bhagiruttee opposite Nuddea city. The Matabhanga leaves the Pudda about ten miles below the place where the Jellinghee diverges from it. It flows southwards near the Eastern Bengal Railway embankment; and at the toll station of Kissengunge branches into two streams, the Echamuttee and the Chromee. The traffic follows the western of these branches, the Chromee, and finds its way into the Hooghly, near the railway station at Chogdah. All these rivers require dredging and constant attention to keep them navigable; and it is to meet the heavy expenses incurred in keeping them open that the tolls are levied. The total revenue derived therefrom, in the year 1873-74, amounted to Rs. 1,63,050 against a gross charge of Rs. 95,930 on account of Public Works Department expenditure.

The traffic of the Ganges is registered, and tolls are levied at the stations of Nuddea, Jungypore, and Kissengunge. Jungypore is situated at the head of the Bhagiruttee, where that river leaves the Ganges. Nuddea is situated on the Bhagiruttee, about 50 miles above Calcutta, and about 80 miles below Jungypore. The toll station at Nuddea registers only the traffic of places situated between Calcutta and Nuddea. The toll station at Jungypore registers the whole of the traffic along the Bhagiruttee, except that of places below the Nuddea station. The small river traffic that proceeds along the Jellinghee is also arrested and registered at Nuddea, which is situated immediately south of the junction of the Jellinghee with the Bhagiruttee. The Kissengunge toll station is situated on the Matabhanga river, and registers the greater part of the traffic of North-East Bengal and part of the traffic of East Bengal on its way to Calcutta. This route is in more or less direct competition with the Eastern Bengal Railway. Returns have lately been submitted, showing for the first time the place of shipment and the destination of the traffic by the Nuddea rivers and canals. The tolls are levied to defray the expense of dredging the canals and keeping them in repairs; and it is because the proceeds of these tolls, alike in the Nuddea rivers and on the canals, are devoted to this purpose that their administration is in the hands of the Public Works Department.

Sahebgunge was chosen by Sir George Campbell in 1871 as the best site for registering the upper Ganges traffic being *below* the point where the last, or nearly the last, of the great affluents join the river, and *above* the point where the most westerly of the Gangetic channels, the Bhagiruttee, parts from the main stream for the sea. The whole of the downward-bound traffic of the North-Western Provinces, the traffic of the two Gunducks, of the Gogra, the Soane, and the Koosee *must* pass Sahebgunge. The Sahebgunge office thus registers all the river traffic that passes between Behar and Bengal; but no tolls are levied at the station. Every boat or vessel passing has to state in writing or verbally the starting place and destination of his vessel, its total burthen in maunds, according to Calcutta Canals' measurement, and the number of maunds of each kind of cargo he has on board. Vessels are boarded mid-stream by the Registering officer. If the tindal has a written statement ready, showing his voyage and destination, the measurement of the boat in maunds, and the cargo of each kind, the Registering Officer accepts the statement. If no such paper is ready he has to ascertain it all verbally. A sufficiently accurate estimate of the cargo is supposed to be obtained by deducting one-third from the measurement under the canal rules; but on testing this in boats chosen at random it was found that no fixed proportion obtains between the measured capacity and the cargo actually laden. The description given of the cargoes, moreover, is not to be depended on. In cases of mixed cargo the whole is often entered under a single head; and when not, the quantities and descriptions of each article are assumed on scanty off-hand information, the bare statement of the charandars being accepted and entered on the toll ticket.

There are three great food-centres in Bengal:—Calcutta, Patna, and Chittagong: and three main streams of export from the Province: (1) from Orissa coastwards to Madras; (2) from Calcutta, Morellgunge, and Chittagong by sea to Ceylon, the Mauritius, the West Indies, and to Europe; and (3) from Behar by railway and river to the North-West. The chief of the great food-centres is Calcutta, towards which immense supplies are constantly streaming by river, by canal, by sea, by road, and by rail. The population of Calcutta and its suburbs may be taken to be 800,000 persons, accustomed to a higher standard of living than prevails in the mofussil, and consuming, we suppose, not less than six million maunds of food-grains a year, and this vast consumption of 200 to 225,000 tons has to be provided for first of all.

In the second place, 350,000 tons of rice and 50,000 tons of wheat and other food-grains come to Calcutta for export by sea; and finally, a vast quantity of rice in transit *viâ* Calcutta, for Behar

and the North-West. Thus the annual import of food into Calcutta is about as follows :—

60,00,000	maunds for consumption in the city and its suburbs,
1,10,00,000	maunds for export to Ceylon, Mauritius, West Indies, and Europe,
30,00,000	maunds in transit towards the North West,
2,00,00,000	maunds.

The second great food-centre is Patna, towards which vast stores of rice flow in a constant stream from Nepaul and Chota Nagpore, on the north and south, and from the most distant parts of Bengal eastwards. These supplies are required partly for Behar and partly for the North-West Provinces. To estimate the extent of these supplies is at present impossible. We know, however, that Patna draws even upon remote Sylhet for rice, and that the quantities constantly streaming up-country by river, railway and road are very great.

The third great food-centre is Chittagong, towards which flow nearly 30,00,000 maunds of rice annually, from Sylhet, Tipperah, Noakhally, Mymensing, and the Backergunge districts, for export by sea to distant lands. The external drain upon the provinces thus begins : (1) low down with Orissa, from which flows a steady but comparatively unimportant supply of rice coastwards to Madras; (2) Calcutta, which taps all the provinces that surround it, near and remote ; Morellgunge, which taps the Sunderbuns and the rice of Jessore ; and Chittagong, which draws off the surplus supply of the eastern districts ; and finally (3) Patna draws to itself vast supplies from the most distant parts of Bengal, and after supplying the wants of Behar therefrom sends the residual stream on westwards to Benares and Mirzapore.

VACCINATION IN THE N.-W. PROVINCES

1874-75.

ANY one whom duty has led into the heart of a district in the North-West Provinces must at some turn or other have lighted upon a dirtily-attired, despondent looking man, generally of the Mahomedan persausion, who upon enquiry was found to be the *Teekawallah*, or as he styles himself the *Vuksinnetur* of the period. Dr. Pearson's estimate of the class is aptly stated in his second paragraph, where he deprecates the adverse criticism to which he appears to think his department may be exposed, owing to the disagreeably large percentage of the total expenditure which the cost of supervision forms." "This cost of supervision," says Dr. Pearson, "cannot be avoided so long as native human nature continues what it is. There are now 401 vaccinators, 35 apprentices, and 5 tube fillers on the establishment. The sense of moral obligation entertained by these 441 persons is not of such a nature that they can be trusted out of sight for any length of time ; unless therefore vaccination is to be a sham we must be prepared to pay heavily to ensure the reality." In other words a larger staff for supervision than was formerly thought necessary has been entertained, and Dr. Pearson thinks cannot be dispensed with. Twenty-two out of thirty-five districts of the N.-W. Provinces have now two vaccinators attached to each *tahsil*, or revenue sub-division, so that when the remaining thirteen districts shall have been similarly provided with a staff of two vaccinators in place of one as at present, we may hope that each village and town will be visited every second or third year. Dr. Pearson admits that this is not much to boast of, but at any rate thinks it must be admitted when we compare the present with the past, that the Government has not been insensible to those of the Vaccine Department. To a people suffering from an inadequate food-supply, it may seem a small boon to offer them a means of stamping-out one of those diseases, which a certain class of economists love to tell us are nature's safety valves to let off the superfluous portion of the population. But no Government has yet ventured to put in practice the theories of Mr. Herbert Spencer and the speculative writers who share his views, and however much individuals may deplore State interference with nature's operations when they assume the shape of famine and disease, the vast majority of thinking men are still embrued with unphilosophical sentiments of humanity ; and we are not likely soon to find it otherwise. It is strange that in some matters the ultra-speculative and the ultra-religious mind should join, though from far different motives in inculcating the non-interference doctrine. The extreme Pietist—as exemplified by a recent instance of refusal on the part of one of the peculiar people to accept medical advice—would leave the matter to God, and the extreme Malthusian would similarly leave it all to nature, God and nature being in all cases assumed to know and to do what is for the best.

We have hardly sufficient data for stating whether our native fellow-subjects take either of these views with regard to vaccination, or indeed whether they have troubled themselves to form an opinion at all on the matter. A writer in an English magazine for December 1874, in an article entitled "Glimpses at the East," says : "The fatalist nature of the Hindoo religious faith, might lead one to expect that the introduction of vaccination would be viewed as an impious interference with Divine sanctions. Nor would this be surprising when we reflect that even in enlightened England this argument has found supporters in a parallel case, where it was desired to apply simple means of prevention to contagious disease, some enthusiastic people having protested against all interference with the due punishment provided by Providence for evil deeds, as an interference that must be immoral and wrong in the sight of Heaven ! But the simple Hindoo has no such exalted notions. The deity (Debi) he worships is his natural enemy, and if the great sirkar or Government can circumvent her designs, he will be only too grateful. He regards that impersonation of earthly power, the sirkar, as not unlikely to be a match for the heavenly one, and indeed probably considers them both of the same order. Small-pox or Debi's sickness, as it is called, is supposed by pious Hindoos to be a direct manifestation of the dread goddess's anger, and no remedy is known to them, except the propitiation of Debi. The introduction of vaccination has, however, proved to them that there exists a remedy ; and though opposition is sometimes encountered, and the native vaccinator has been driven away ignominiously by the villagers, such cases are partly accounted for by the fact that the persons appointed to the office are, more often than otherwise, young Mussulmans of any thing but strict moral principles, and that the villagers naturally distrust the introduction of such persons to their families. No doubt the writer has hit upon a weak point in the system, the extensive employment of Mahomedans—a fact difficult to obviate, owing to the distaste with which Hindoos, not of the lowest castes, regard the employment No direct reference to this is, strange to say, made in D. Pearson's report ; but the following passage may be intended to allude darkly to the difficulty : "Practically there is very little difference in any of the vaccinators : as vaccinators, they are all equally trained and supervised. The difference is in the localities in which they work. The Government vaccinators are employed principally in the rural districts, where the people are amenable to persuasive influences. *In the cities, other feelings come into play, and assert themselves in a manner not conducive to the vaccinator's easy and peaceful pursuit of his calling.*" Can Dr. Pearson possibly mean that the native vaccinator sometimes abuses the opportunity his position gives him of access to the families of his patients ? We have heard complaints of this, although the Government of the N.-W. Provinces states the chief hindrances to vaccination to be the apathy and ignorance of the people." Sir John Strachey's views with regard to the relations that should subsist between the native vaccinators and district officers are expressed in the vigorous but at the same time rather vague style which has characterised recent effusions from the North-Western Secretariat. Para. 15 of the Government review is headed : "Apathy on the part of certain district officers ;" and we read that "the Lieutenant-Governor desires to take this opportunity of saying that apathy on such a subject is not creditable to district officers. *No direct pressure is required or would be allowed* [the italics are our own.] But enquiries when on tour, an interview granted to the vaccinator, and explanation as opportunity offers to the landowners are enough. . . . . His Honor hopes that he will not have to notice recurring inattention hereafter." By all means let district officers give the "*Teekawallah* a chair, converse with landowners on the subject of vaccination and make enquiries ; but if His Honor supposes that these simple measures will suffice to weaken the prejudice natives have to the vaccinators—to them rather than to vaccination itself—we think he is mistaken.

In the preceding paragraph, certain district officers are commended for the intelligent interest which by "a decided *consensus.* of opinion in the reports of all provinces" they are shown to have exhibited. May we be permitted to ask if no direct pressure —which it will be recollected is neither required, nor would be allowed—was used by any of these belauded officers? As a matter of fact, is it not true that many district officers make it a *sine qua non* condition of the retention, or attainment, of the meanest post under Government, that the holder or the aspirant together with all his belongings shall be submitted to the vaccinator's lance? We are not condemning the practice. There is more, we think, to be said in favor of than against it. But once admit that this is the mode of showing "intelligent interest" in

the subject, and what becomes of the prohibition against influence, or rather where does Sir John draw the line between influence direct and indirect? On page 10 of the report we read that "on the 5th March the *jagirdar* of Fatehpoor Tori *had the children of several of the leading merchants and nobles in his dominions vaccinated.*" Sir John is not apparently prepared to carry his zeal as far as this, but the incident is referred to without disapprobation.

A very interesting portion of the report is that where reference is made to the conflict between the rival methods of inoculation and vaccinations. Dr. Richardson, Superintendent of the Benares Circle, is of opinion that the former practice is undoubtedly on the wane, and that the inoculators themselves are becoming aware of this. It is according to Dr. Richardson a hopeful sign that, in one district, the inoculator waylaid and beat the vaccinator, on the ground that the latter was taking away his means of livelihood: the hopefulness of the occurrence resting on the inference that they, the inoculators, "can no longer afford to laugh at our efforts to supplant them." Meanwhile advantage is taken of every opportunity to win over such of their number as from age and education can be of use as vaccinators. "It would be ungrateful on our part," writes Dr. Richardson, "to treat with harshness the starving disciples of a craft which has been useful in its day, and to which at all events we owe it that the people have been taught the existence of some means of protection from small-pox."

Should any of our readers think, after Dr. Pearson's admission at the commencement of his report as to the absence of any great sense of a moral obligation among his subordinates, that statistics furnished by such persons are entitled to any great credit, they will find any taste they may have for figured statements, amply catered for in the 24 pages of appendices that follow the narrative portion of the report. The total number of operations performed is said to have been 494,928 against 464,233 in the previous year. The general percentage of success in primary cases was 87·64, which shows, we are told, a slight improvement over former results. We do not think it worth while to follow Sir John Strachey through the many conclusions and presumptions he has found it possible to base upon the figured statements. We are satisfied, with Dr. Pearson, that the local Government has, "with all its many other claims, not been insensible to those of the vaccine department. "At the same time we think Sir John expects perhaps a little too much at the hands of over-worked district officers when he would hold them, to a great extent, responsible for the success or failure of the system. These officials have already quite enough miscellaneous work to do, apart from the discharge of their regular judicial duties, without being pestered with native vaccinators seeking interviews whenever the collector-magistrate shows his face outside the sudder station.

CHESHIRE ON THE SALT TAX.

MR. CORBETT, a Cheshire salt manufacturer, writing to the *Times* in the interests of his trade, demands greater facilities for the importation of salt into this country. The *Pioneer*, in commenting on his letters, has fallen into certain errors. Mr. Corbett declares that the consumption of salt in England is estimated at 20lbs. per head per annum, but in India at only 9lbs. The *Pioneer* points out that in the Madras Presidency, where "the consumption is larger than in any part of India," the consumption is 17lbs. per head; but it would be more to the point to answer Mr. Corbett's assertions by shewing what the average consumption is in those parts of India where it is least. The *Pioneer* states that the consumption of salt all over India is supposed to vary from 8 to 12lbs. per head. We believe the average, except perhaps in Oudh, is nowhere so low as 8lbs., and that it varies from 10lbs. in the Punjab to 17 or more in Madras. It is of course much less among the wheat-eating populations of the North than among the rice-eating populations in the South. In the Punjab the allowance to every prisoner is 219 grains or ½ ounce per day, and in Oudh, where the allowance was less than this at one time, it was afterwards we believe raised to that amount on the recommendation of the Inspector-General of Prisons. It is found that this quantity is sufficient to maintain the prisoners in health so far as salt can do so. Now half an ounce per day is about twelve pounds per annum; but the prison allowance is calculated on the amount necessary for an adult man, and taking the average of the whole population, including women and children, it has been reckoned that 180 grains per day, or 10lbs. per annum, is the average consumption per head of the people of the Panjab, where it is supposed to be less than in any other part of India. We except Oudh for a reason to be hereafter given. A recent Revenue Administration Report stated that only 785,000 maunds of salt were consumed annually by the eleven and a half millions of people in Oudh, which gives an average of 5½lbs. per head. The population is probably the poorest in all India, but still it seems almost incredible that the amount of salt consumed by them is so small. The probable explanation is that an illicit manufacture of salt is still practised to a great extent in the southern and eastern parts of the province, where there are large plains of saline earth: or it is possible that there may be errors in the statistics. At any rate, excluding Oudh, we do not believe that the consumption of salt in any part of India is less than 10lbs. per head per annum. But the true answer which should be given to a writer drawing inferences founded on analogies between the consumption of salt in England and in India is that any such comparison is misleading. In England large quantities of salt are consumed in manufactories and chemical works, and a great quantity is also used in the preservation of provisions intended for exportation. Mr. Corbett's estimate is apparently founded on the statistics collected by Mr. J. R. McCulloch, in which no attempt was made to distinguish between the salt consumed by the people, and that used in manufactories and in salting provisions. Again; the people of England, and indeed all western countries, use salt in a much more wasteful way than the people of this country, and the latter require therefore a less quantity of the article. Mr. Corbett's motive is doubtless his "sincere and "impartial anxiety for the physical and social well-being of "the natives," but something else besides the philanthropic benevolence towards the people of this country which the thought of their saltless condition developes in the mind of the Cheshire manufacturer, will be needed to induce the Indian Government to tamper with a tax producing an annual revenue of six millions. The tax sins against first principles; but until some less objectionable way can be suggested of raising the revenue yielded thereby, it is idle to denounce it, if not mischievous.

MOCK TURTLE.

[By Diogenes.]

THE quackery of Science, now so prevalent at home in certain circles, is, we fear, extendng itself to this country, in a manner to excite no agreeable emotions. Already, scientific *talk* has become a very noticeable feature of dinner conversation, and we may look for the worst, and for more public exhibitions of experimental science by amateur lecturers and philosophers, ere this Indian world of ours grows much older. The popularity of Tyndall and his confreres has caused many men and women to strive to emulate that eminent *savan* in a small way, but though we admire the great guns of the British Association in the original, we must honestly confess to very little admiration for their unprofessional copyists anywhere. Diluted science is of all things the weakest, while the mawkish draught is now-a-days being constantly presented to inoffensive persons, as if it was something they were bound to accept for the benefit of their health and spiritual welfare. We have amateur Science everywhere now—in the pulpit, on parade, in cutcherry, the merchant's office, the doctor's study, and even at sea. Parsons have a peculiar science of their own which is unanswerable, in Church at least, and in which they strive to reconcile certain texts of the old Testament with the teachings of the old red sandstone and what not. Garrison Instructors, and their well-stimulated classes, have science at their fingers' ends to such an extent, that they will tell you on the smallest provocation how to measure a mountain, or to find the cube root of nine Prussians all in a row. The medical man is no longer the earnest ally of the druggist as of old. His discourse is of electricity and ozone in place of castor oil, and he frightens the nervous into fits with his dissertations on oxygen, hydrogen, and similar gaseous profundities. Our bluff old skipper of less enlightened days, who spoke of steering gear, and top hamper, is now a professor of hydraulics and maritime machinery, and might be readily mistaken even on the deck of his own vessel, for a polytechnic professor, or a philosopher of Bonn. In short, every class has a scientific slang of its own, and people have caught science like the *Dengue* in the most unaccountable manner.

It is doubtful if it is always good to probe the causes and effects of things to the bottom : it is certainly wearisome. People are not content now, unless they let in the light of science on their stomachs and note all that is going on therein. The amateur philosopher will tell you, while you are seeking to enjoy your dinner, what is blood-feeding, brain-feeding, and tissue supporting on the table. He will even tell you what the brain is, though one doubts if he has any of his own. He is great upon adulteration, and "death in the pot," and has the scientific name at his tongue's end for all the villainous condiments he believes to go to make up a bottle of champagne. One dreads to eat or drink in his company, for, metaphorically speaking, a man of this sort places a pane of glass upon the epigastrum of each one of the company, through which he or she may cheerfully witness the bedevilments that are ever going on inside them. It is wonderful how any one can enjoy such dismal delights; nevertheless, for those who fall in with this scientific fashion there appear to be few things equal to it—nothing to surpass it.

More extraordinary however even than this is the case with which any impudent person can ape the man of science. The possession of a tin rain guage, value four annas, will give a man the credit in India of being a great meteorologist. One who learns some geological terms by heart, and has the sagacity to christen his babe "Murchison," will readily pass himself off as a *savan* of the first water. If he swears he has discovered coal, he may even obtain the thanks of the Government, but at the worst he is sure to be a success in society. He will be asked to many a *khana* to discourse on stones, and give his views on primary formations. Young women apprehend that he is old Buckland, or his ghost, and are alarmed in the most interesting way at his anecdotes, of a primeval globe and its monsters ; and though most of the Company know that all this scientific discourse is second hand, it suits the spirit of the times, which is all in favor of delusion.

The pedantry of Military Science is growing particularly offensive. It used to be a complaint of mess tablesthat the "shop," there was wearisome, such "shop" usually having reference to new uniform and old garrison hacks. But the Germans have changed all this, and the army slang of the day is chiefly mathematical One sickens of the "trajectory" of the tactics of the school-room and the strategy of the barrack square. Martini Henry is the military bogy of the day, and military science in society is a horrible nuisance. It may not be precisely the fact that the gallant young Hussar of the period whispers logarithms into the ear of his fair partner in the mazy valse, but he does the next thing to it, he talks musketry at supper. And while so talking, he is rivalled by the Civilian across the table with his science of food and famine. Scarcity is expounded upon philosophic principles, and its origin traced to certain constituents wanting in the composition of poor old Mother Earth. The C. S. *savan* will leave a vague impression on the company that it is all somehow phospherous and very interesting, but no one understands it or wants to. It is the flow of words that carries the day in these things, and reverses the proverb about silence being gold. We suppose it is natural that the ladies should follow the fashion of the hour, and talk learnedly on subjects we hope they don't comprehend. The conversation of Indian society has long labored under the imputation of slander, but "gup"—trifling as it is—may be considered preferable to some of those philosophic subjects of a delicate nature, which women take up now and then and air with an audacity inconsistent, we think, with the characteristic modesty of the sex. Even a thing so innocuous as astonomical slang is more curious than attractive when issuing from the lips of a gentle woman, and one cannot help wishing that photospheres and spectrosoopes were carried away by Venus in her transit for the benefit of the sex in this wicked world down below. What on earth, indeed, ladies have to do with the heavenly bodies is a mystery: it might be supposed that the enchanting bodies of the milliners would afford "the fair" every occupation of the age they live in.

The effects of Amateur Science upon India, if it spreads, must be considered with reference to the manners and customs of our Aryan brethren. We hardly think that the science we allude to is calculated to improve either. A Hindoo Huxley, lecturing in broken English, might fitly shine in burlesque or pantomime, but we hardly require his services off the stage just yet. Science is already parodied by our own people in numbers, and it would be too hard upon the country if the Parsees and the Mahomedans were let loose upon us, each man with the professional glass of water, and the box of beetles, or some similar *pabulum* for his discourse. And yet it is to be feared that there is a tendency among the natives to indulge in the self-satisfaction produced by that little knowledge which the poet assures us is a dangerous thing. Mock science is such an easy way of gratifying one's conceit at the expense of our fellow-creatures. It is the one sham which people will endure almost without remonstrance, probably because the age is confessedly scientific. It is, then, a frightful temptation to a self-sufficient person, whatever his color may be, to improve and instruct surrounding humanity. For our own part, we sometimes almost think that the many extraordinary privileges conferred upon us by real science are almost counter-balanced by the tedium inflicted by the Mock Turtles, if we may call our amateur *savans* so.

Science, as exhibited by Tyndall and Huxley, is admittedly full of fascination. The discoveries effected by these and other eminent men must naturally sharpen our wits to discover things for ourselves, and no objection is here taken to the man or woman who is following science with a useful motive, however small that may be. The censure applies only to those who prostitute it to the gratification of a pitiful personal vanity, and talk learnedly of things of which they really know nothing. There is very little faith or credit to be placed in the science of the drawing or dining room of the day. It abounds with a variety of speculations founded on smoke, and is practically perhaps equal to the inflammation of a Pharoah's serpent ; but nothing more. Nevertheless, as we have remarked before, it goes down with the multitude, which blindly imagines Tacticians, Astronomers, and all kinds of human phenomena, to exist in its midst, and in the persons of people who have nothing but audacity and some stuffing as their scientific capital to draw upon, while the old fogies wish for the wit and the decorous joviality of dinner-tables thirty years ago. To be candid, we think that discussions on bones and boulders are but poor compensations for a style of conversation which is as much out of date now as a mastadon or a liberal Conservative.

THE CIVILIANS' GRIEVANCE.

(Communicated.)

THE Indian Press has for so long been teeming with articles on the above subject, and letters from different members of the service, advocating each a separate remedy ; and the views of the writers have differed so widely, and such vague expectations seem to be entertained by some persons, that the following view of the subject may perhaps help to place the problem in its proper light.

> Suave mari magno turbantibus æquora ventis,
> A tena magnum atternis spectare laborem.

Have the Civilians of the N.-W. P. a grievance? Parliament have solemnly admitted that they have a substantial grievance, and the public have universally expressed their concurrence. Now when a grievance is admitted on the part of its servants, Government *ipso facto* undertakes the responsibility of redressing it. The Home Government says, "Redress is doubtless needed, but the Indian revenues must not be burdened with any extra payments." The Government of India replies, "How then can redress be given:" and the Home Government replies by reiterating its former statement. Meanwhile disappointed assistants of 10 and 12 years' standing complain that they are still suffering. Naturally they complain. The local Government says, "Redress is necessary." The Government of India replies, "Doubtless; but you must spend no more money." This being the case we ask, "Who is responsible for the present state of things?" Friend and foe agree that this responsibility rests with the Government of India, which saddled the N.-W. P. with a number of men intended by the Home Government for the Non-Regulation provinces of Oudh and the Punjab. The Government of India have caused the evil and must cure it, or lay themselves open to a very unpleasant charge. The evil can be met in two ways, and only two as far as appears to the writer ; either by increased expenditure and an increase of the pay of appointments, or by appointing Civilians to posts now held by non-civilians.

Now, if the papers inform us rightly, the Home Government have placed their veto on remedy No. 1 ; and the only alternative is remedy No. 2. The Government of India possesses the patronage of the posts in the Non-Regulation districts, which are very numerous, and also of the Political appointments in Rajpootana and the hundred and one States in and around India. Why then should not the Government of India use this patronage to redress the wrong. Would the men be fit for

the posts? In knowledge of the native character, language, customs, few men in India surpass them. In general education they are not likely to be *inferior* to any other men whom the Government of India can find to fill the posts. In fact they are admirably suited for the work. But supposing that this scheme was carried out, what would be its effect on the service? Would it be a cure for the grievance? A man might object to leave the N.-W. P. and go to an unknown country. If he did object to go, having no prospects before him if he stayed, he would deserve to be passed over. Most men like change in this monotonous land. It is a universal cry in India that you are in danger of falling too much into a groove. Here would be a grand opportunity for effectually getting out of a groove. The Government should of course guarantee a minimum rate of salary, say Rs. 1,200 for men of ten years' service, and Rs 1,500 for men of 15 years' service. A man who refused to accept such an offer would deserve to be passed over, and the offer would then be made to the next man on the list. How then would the service stand if this scheme was caried out? The Government of India has provided for say 25 or 30 men elsewhere; these would probably be taken from the ranks of those senior assistants who have so long been serving in subordinate posts, their grievance would be remedied and all below them would get a push up the ladder.

But we are reckoning without our host. What would the Government of India say to such a proposal? They might object:

(1.) We cannot undertake the responsibility of Government, unless you allow us to choose our own instruments. If you force a number of men upon us, we cannot be responsible for the good couduct of the administration. But, dear Sirs, the Governors of Bombay and Madras, and the Lieutenant-Governors of Bengal and the North-Western Provinces might make the very same objection. They are not allowed to choose their instruments, but are nevertheless held responsible for good administration. And besides this, we have shown you that the men we wish you to take are tried men, men of experience, acquainted with the ways of the country, and in every way extremely fit men for the posts.

(2.) We should be doing injustice to the men now filling these posts, and to those below them, who naturally expect to rise to these posts afterwards. As for those below, they must bear the disappointment. We do not know what rights they possess: while we know that you have entered into a covenant with the civil service. When you have fulfilled your covenant you may then provide for the others but not till then. Further we like not your instruments: we do not like to see soldiers exchanging the sword for the pen. We would rather see our gallant captains and colonels doing duty with their regiments. They are out of place in cutcherry.

(3.) But where are we to find 25 or 30 posts as Deputy Commissioners or Political Agents vacant? Dear Sirs, are there not Burmah, Assam, Chota Nagpore Berars, Hyderabad Assigned Districts, Ajmeer, Mhairwara, to say nothing of the Punjab and Oudh, and all the Political Agencies in and about India: and the non-regulation division attached to the North-Western Provinces? It is passing strange if out of all these you cannot provide for thirty Civilians whom you have wronged.

4. But lastly the Government of India may say, "What's the Civil Service to us, or we to the Civil Service? The posts you ask for are filled by our special friends whom we wish to advance." Dear Sirs, it may not matter much to you, but it matters much to England, who looks on India as the most valued of her possessions. You may be gone tomorrow but your action may breed disaffection in the ranks of your Civil Service, and blunt its present fine sense of honour. And the world at large knows that whatever credit and stability the administration of India possesses is due in the main to its Civil Service. And if that service is shaken in its allegiance India and England will rue the day and the hour when that came about. We have now preached our sermon: we have shown the statics of the problem; let us now turn to the dynamics: and try and see what will be the resultant of the forces at work. If the Government at home forbids any extra expenditure, will the Government of India act as we have suggested of their own accord? We trow not. The claims of relationship are stronger than the claims of duty. "India has brothers, "sons, cousins, and will hardly right the Service except "under compulsion." How then can India be compelled? We know only one power able to effect it, *viz.*, the Home Government. Will the Home Government compel *India*? If they are in earnest, Yes. Let them order the Government of India to provide for 25 or 30 of the men over ten years' service out of the North-Western Provinces. And the knot is cut at once.

LONDON LETTER.

LONDON, 24TH SEPTEMBER 1875.

I MUST ask your readers to be content with a brief and uninteresting letter upon this occasion. During the Parliamentary Recess in England the writer of a Political Letter would have literally nothing to record, were it not for the rather singular feeling of indignation which has been evoked on the subject of the accident in the Solent. This is certainly instructive as showing what a very fragile matter is the popularity of the Royal Family—how easily an injudicious Sovereign might shatter it to pieces so that it could never be put together again. The running down of Mr. Heywood's yacht has, as I mentioned in a previous letter, aroused a very angry feeling throughout England. There can, I fancy, be no doubt that the responsible officers of any other vessel would have been charged with manslaughter. The evidence at the inquest clearly showed that though going at a most dangerous rate of speed in a narrow and crowded channel, the look-out on board the Royal yacht was so negligent that until tapped on the shoulder by his own Quarter-master, Captain Welch was not aware that he was in danger of running into the *Mistletoe*. To make matters still worse, Prince Leiningen was foolish enough to produce in Court a letter from the Queen, expressing her contentment with the officers of her ship, as though this letter ought in some way to influence the decision of the Jury. To crown all, the manner in which the naval officers gave their evidence was grievously lacking in candour and straightforwardness. Rightly or wrongly, the public became convinced that the officers knew they were in error but intended to brazen it out. All these influences working together found very clear expression when the Jury on the second inquest found a verdict of "accidental death." The crowd assembled hissed the Jury and hooted the officers, and though the newspapers, in the regular courtly fashion, expressed their satisfaction at the verdict with the accompanying "rider," the public generally was warmly in accordance with the crowd. It, like them, hissed the Jury and hooted the officers. At this moment, when every one was sore and angry—trailing their coats about and hoping they might be trodden on—appears a letter written "by command of Her Majesty," and addressed to yachtsmen generally, containing an expression of regret for what had passed, but coldly advising them to keep out of the way of the Royal Steamer in future, or they too would be run over: of course the letter did not say this in so many words, but that was the purport of it; and every one was delighted. They wanted to quarrel, and here was a gage flung down just in the very nick of time. The letter was interpreted as intending to set aside the judgment of the jury and all England, and cover the negligence of the officers by the direct interference of Royalty. It was in vain that the *Times* strove to calm the storm. It went on muttering and exploding in a truly formidable and persistent manner. The Queen, however, has now come forward and explained. The letter, it appears, was written before the inquest, and was in no way intended to exculpate the officers of the Royal yacht from any blame that may be found to attach to them. This second communication has smoothed the ruffled mane of the angry British lion, and with a few sulky growls he has resumed his customary somnolent and acquiescent mood. The incident is of small importance except for the flash of light it throws on the monarchical feelings of the English people. They like to applaud their kings, to have them lay foundation stones, christen ships, open hospitals, attend Royal Academy dinners and so forth, but the moment Royalty presumes to be other than a State pageant, and to give evidence that there is a human heart beating underneath the Royal robes, the English people are smitten with the profoundest wonder and indignation. Unlike the Catholics who are delighted when their idols take to winking, we, it seems, do not want our kings to exhibit any signs of animation whatever. In saying this, I do not mean to imply that the Queen wished in any way to set aside the verdict of the coroner's inquiry. The interesting and important part of the incident is the general indignation which

has been awakened by a perfectly groundless suspicion that she, or rather some of her advisers, had attempted to do so. This, I think, is curious, because these very same people, or at least by far the larger part of them, would affirm vehemently that the peace, order, and prosperity of the Empire of Great Britain are inseparably linked to the existence of an inanimate king—that this and only this preserves us from the abyss of revolutionary excesses. There is, however, more truth in this supposition than appears at first sight. I doubt not the black and white French virgins, to whom pilgrims are at present flocking in such abundance, do really produce a beneficial effect on the blind, halt, and maimed, who go thither to be cured of their diseases—or, to speak more correctly, the belief in them does. And a profound reverence for inanimate kings must, so long as it lasts, be a very potent barrier to projects of political reform.

Mr. Tennyson's drama of "Queen Mary" is shortly to be produced at the Lyceum Theatre, with Mr. Irving as "King Philip" and Miss Bateman as "Queen Mary." The Poet Laureate has added some scenes to make the piece better fitted for theatrical representation, and all those parts in which Cranmer appears are, I believe, to be omitted as being of too sacred a character for the stage. The play, as a matter of course, will not be condemned, and it will attract large audiences, but I cannot suppose it will retain possession of the stage. No purely historical play has ever done so. Shakespeare's Richard II. contains much of the finest and deepest poetry he has ever written; the character of the King is depicted with a subtlety, truth, and finish that he has never surpassed, but as an acting play it has never been popular. Pure history lacks stage interest, because not only is every turn in the events known before hand, but the effects also which they produce on the actors in them. And so it is that only those historical plays of Shakespeare are permanently popular on the stage, in which he has interwoven something of private life with the historical background. Fancy King John without the character of Falconbridge—what a *caput mortuum* it would be. And it is this blending together of historical and domestic drama which gives such supreme interest to the two parts of Henry IV. and Henry V. In "Queen Mary" not only is there nothing but pure history, but the poet has introduced such a multitude of characters that he has not left himself space to do more than give a few touches to each and pass on to the next. Wyatt's insurrection, Cranmer's last moments, Mary and Philip, Elizabeth in exile and at Court—all these are so many distinct crises of action which never converge or cross one another, and so all unity of effect is lost, and the interest of both reader and spectator is broken up and frittered away. The fact, I fancy, is, that as a tragedy the effectiveness of Queen Mary has been ruined, because the Poet Laureate desired not merely to write a poem but to deliver his testimony against Ultramontanism, which is at this moment striving so hard to re-assert its supremacy over Europe. And as a political pamphlet, I fancy, its power will be greater and more lasting than as a poem; though from this point of view, too, it is to be regretted, at least in my opinion, that Mr. Tennyson should have selected Cranmer as the representative of English Protestantism. He has been compelled to depart from historical truth, in order to obtain for his martyrs a degree of sympathy which the bare facts of the case would scarcely have extorted. Cranmer was a trimmer and a persecutor, and had all our English reformers been men like him, we should never have thrown off the yoke of Rome. But in Hugh Latimer the Poet Laureate had a hero made to his hand. It would have been an act worthy of an English poet to have embodied in his verse a delineation of such a thoroughly great and good Englishman. I cannot understand what motive induced Mr. Tennyson to set the one aside and choose the other.

In France the political prospect is once more overcast. When Admiral Ronciere le Noury was deprived of his command on account of his seditious letter, people began to hope that the Marshal and M. Buffet were convinced that political honesty after all was the best policy. These hopes have been completely destroyed by the incidents of the past two or three days. M. Buffet, in a speech recently delivered, has thrown down the glove against all Republicanism. The policy of the Ministry, he affirmed, was not merely to fight against the extreme Republican party, but against those also whose opinions, though not the same, conduct logically to the same issues. Can any sincere and impartial reader," asks the *Journal des Débats*, "doubt that by the epithet 'revolutionary,' the minister means to designate the Radicals, or that when speaking of ideas which, without being revolutionary, tend to an abyss and the abomination of desolation, he refers to those reasonable Republicans who founded the Constitution of February 25th?" This is what I have repeated again and again in my letters. The Marshal and M. Buffet are determined, if they can, to destroy their own Constitution. They wish to form a league of Royalists, Bonapartists, and Clericals, against the very men who have ratified their Constitution and seated them in power. It would be difficult to find a piece of political perfidy more signal and unprovoked than this. The *Telegraph* of this morning announces that at a recent meeting of the Cabinet the Ministry agreed to stand or fall by the *scrutin d'arrondissement*, and that the Marshal declared he would oppose the dissolution of the Assembly if the elections were to be conducted on the principle of the *scrutin de liste*. The Republicans are certain not to yield in this matter. With such an utterly unprincipled politician as M. Buffet to superintend the elections, with all the *arrondissements* in the hands of Bonapartist prefects, it would be madness to do so. Even the present Assembly, in its imbecile and impotent condition, would be preferable to a new one which seemed to possess the *prestige* of a popular election, and yet did not represent the feelings of the country. If then the Marshal and his Ministers persist in their insane determination to suppress the voice of the people, it would be hard to say what might not happen in France during next year. But the Assembly does not meet for six weeks yet, and it is just possible that these clouds may clear off. It is becoming more and more manifest that the judgment of Europe is adverse to the policy of the Marshal and his satellite. Both Germany and Russia see clearly enough—indeed Prince Gortschakoff has said so in so many words to M. Thiers—that the existing French Government, under pretext of combating revolution, is fostering the most dangerous revolution of all—the Ultramontane conspiracy against all existing institutions. Italy and Austria are not less directly interested in the establishment of a Government hostile to the exorbitant pretensions of the Clericals; and France in her present fallen condition cannot afford to pursue a policy which will leave her without a friend in Europe. I need not say that here, in England, any attempt on the part of the French Government to strangle the Constitution in its cradle would be everywhere condemned. There would be nothing to fear were it not for the profound stupidity of Marshal Macmahon. Against stupidity, the gods themselves fight in vain; and I doubt if this particular quality has ever been possessed by man in such pure and beautiful perfection as by the President of the French Republic. No glimmer of political light ever proceeds from him, and none, it seems, can enter. His utterances, when forced to say something upon the occasion of provincial tours and the like, remind one painfully of the eloquence of Mr. Barkis in David Copperfield. "Barkis is willin'" was all that worthy gentleman could ejaculate, and the Marshal's flow of language is limited to similar laconic and unmeaning remarks: "I am a lover of my country," he remarked on a recent occasion. This is the longest and most lucid speech yet recorded of him; but it cannot be said to help France much in tiding over her present difficulties. I don't suppose the Marshal has any plans of his own; in fact I am quite convinced he is incapable of thinking out a plan. His political capital consists of one conviction, and that a negative one. He will not have a Republican Ministry. The problem which the French nation has to solve is—the nature of the surgical operation necessary to eradicate this negative conviction from the mind of the President. It is one of the most difficult ever set before man.

LETTERS TO THE EDITOR.

MEDICAL SERVICES AND OFFICERS.

To the Editor of the Friend of India.

SIR,—In reply to your correspondent's question as to whether a Medical Officer of Government in the Mofussil attached to a Civil Station, or in the Presidency attached to the charge of a division, should attend a pensioner of the Government gratis—I would state on the best authority, namely, the orders of Government published and issued from time to time, that he is most decidedly required under the Rules to do so. In the Mofussil a Medical Officer attached to a civil station draws salary from the Government principally and primarily for his attendance upon the servants of Government and their families, just as a Doctor attached to a regiment draws his salary for his attendance upon the families of the officers, and upon the officers and men of, a regiment. In the Presidency the same Rule prevails. If a Medical Officer refuses to do so, he is guilty of a grave dereliction of duty for which he is *solely* paid, and is liable to removal by the Government. A Medical Officer who accepts a fee under these circumstances is virtually guilty under sec. 61, page 124 of the Penal Code, in my humble opinion, of "taking a gratification other than legal remuneration in respect of an official act," which is not only reprehensible but illegal, in the same manner that a judge paid by the Government would be amenable, if, in addition to his professional salary, he charged a

suitor for every decree he passed, or a Collector and Magistrate if he accepted a bribe, for passing judgement in a revenue suit.

In the Mofussil as well as in the Presidency one or two other duties have been added, as charge of jails, and Medical charge of, say, the police, but for each of these duties, the Medical Officer is paid separately, and in addition to his primary substantive pay for attending to the health of the officers of Government.

I have, however, heard that Medical Officers here have insisted on being paid by officers of the Government on the same scale as they are paid by private individuals and for their families. If every such case were reported to Government there would soon be a radical reform of a very crying and a very grave evil.

Either the large salaries drawn from Government should be stopped, and Doctors in private practice not paid by the State should be called in, or the fees now *levied* from public servants should be given up. It should be remembered that while the Government has allowed a handsome scale of remuneration to Medical Officers for attendance upon their officers and the families of their officers, it has at the same time allowed them to attend private families, and has never interfered with their private practice. With the extent of the fees charged for such attendance neither I, nor your correspondent, I believe, have any concern.

"AUTHORITY."

ETERNAL PUNISHMENT.

I.

To the Editor of the Friend of India.

SIR,—I have read with much interest the articles and correspondence in your columns on the doctrine of Eternal Punishment,—the most momentous subject that can invite attention. I do not wish to say anything on the old and so long unquestioned "orthodox" doctrine, of which you have already spoken in strong but not at all too strong language,—except that it has long been a marvel to me how feeling and estimable men, who think they hold it, and also hold the entire foreknowledge of God, can fail to see that these two doctrines taken together, and coupled with the facts—patent to our eyes—that of the thousands of daily new-created souls sent into this world the vast majority are by God's own fiat, placed in circumstances in which they *cannot* fulfil the conditions declared by the same school to be needful to salvation—accuse God of more hateful conduct than was ever attributed to Satan himself—for *he* does not call men his *children*. Nor need I speak of the various palliations imagined by those who see this difficulty,—such as talk of "prolonged infancy," "invincible ignorance," and the like,—all which amount but to favouritism in the first place, and in the second to cozening the devil by sweeping the stakes.

What I wish to note here is that you seem to lean to the theory advocated by the Revd. S. Minton and others of eternal life only for the redeemed, and annihilation for the rest of mankind. I have read some of Mr. Minton's tracts, and know his course of argument. But I wish to put it to you whether even this doctrine does not give far too much victory to the Principle of Evil, whatever that mysterious creature may be,—and if not the Creator it must be His *creature*, and do His will. Can anything less satisfy a loving heart, can anything less be worthy of Infinite Perfection, than the end shadowed by the poet?

> Oh yet we trust that *somehow* good
> Shall be the final goal of ill,—
> To pangs of nature, sins of will,
> Defects of doubt and taints of blood.
>
> That not a worm is cloven in vain;
> That not a moth with vain desire
> Is shrivelled in a fruitless fire,
> Or but subserves *another's* gain.
>
> That nothing walks with aimless feet;
> That not *one* life shall be destroyed,
> Or cast as rubbish to the void,
> When God hath made the pile complete.

That we cannot see *how* this should be should not daunt us,—if we can conceive it, God can do it.

I would wish to commend to your attention, if you do not know it, and to that of any of your readers who are interested in the matter, a small book—it costs but five or six shillings. "The Destiny of the Human Race" by Henry Dunn. I cannot give you the publisher's name, as it is not at hand. Mr. Dunn is a complete believer in the authority of Revelation, in which alone he seeks the answer to this problem,—therefore the most orthodox need not fear being shocked by his treatment of the subject. But in an earnest and reverential spirit, he so marshals and compares the declarations of Holy Writ touching this matter as to afford, I may say, a happy relief to perplexed spirits, such as some of your correspondents profess themselves, and, a probable reconcilement of conflicting passages,—and in particular he attaches to the doctrine of Election a meaning which not only separates it from Reprobation, but enables it to be held without impugning God's justice and impartiality. I recommend the book to your correspondent H. and others like him.

I.

II.

To the Editor of the Friend of India.

SIR,—I have read with much interest the articles and letters that have appeared lately in your paper bearing on the subject of future punishment. These articles and letters, with perhaps one exception, have denounced the doctrine of eternal punishment—declaring it to be repugnant to Scripture and conscience, and an outgrowth of certain heretical teachings which gained a footing in the Church subsequent to the Apostolic age. I have noticed, however, that there has not been even an attempt to substantiate the first at any rate of these assertions. True, there have been many quotations given from one author and another, in which the torments of the damned are described in minute and disgusting detail, and by this means discredit may be, and doubtless has been, thrown upon the doctrine which is held by the Church generally. But surely it is hardly fair to represent the effusions of a few (or if you prefer it of *many*) individual writers whose imagination has unfortunately been developed at the expense of their common sense, as a faithful exhibition of the doctrine which is held and has been held for many centuries by the great mass of Christians. I believe this doctrine to be taught by the Word of God, yet if it can fairly be shown to be otherwise, I shall be only too glad to acknowledge the error and abandon it. But the quoting of passages such as those I have alluded to seems to me far from affording proof either on one side or the other of the question, and only to create confusion by making the doctrine appear to be what it is not. For example "A Layman," in your issue of the 9th, favors us with one of the "refinements upon which Catholic teachers of the orthodox school venture." Who this Catholic teacher is we are not told, yet I can very readily believe that not only one, but, in the course of ages, many, individuals of the orthodox school may have written things as repulsive as that which he quotes—or even more so, but does it by any necessary consequence follow that the doctrine of eternal punishment, decently stated, is antichristian or unscriptural? It is idle to quote extravagancies of this kind, indulged in by certain writers of the "orthodox school," in refutation of a doctrine which the great body of that school believes to be the solemn and emphatic teaching of Scripture. Neither can the views of "A Layman" and of those like-minded with him, be maintained otherwise than by the presentation of clear and distinct arguments based upon the Bible itself. What is needed is a statement of those passages in the Word of God which contradict the Church doctrine on this point, and such an explanation of those which *seem* to support it as will make them harmonize with the teachings of those who advocate the opposite theory.

A few weeks since, one of your correspondents referred in his letter to a number of passages of the latter class, and asked you for an expression of your views in regard to them, but elicited no other answer than something to the effect that the texts in question had not been overlooked by the editor. This reply was unfortunate, because, however true it might be, it was hardly satisfactory either to the correspondent himself or to the generality of your readers who take an interest in the question.

One other point in "A Layman's" letter I wish briefly to call attention to. He says, "it is as certain as God lives, that Christianity is 'glad tidings of great joy to all people," and if we are preaching a Christianity that cannot be so described without a reserve that hides its real nature from ourselves, it is not the Christianity of the Bible nor the Divine message that is to convert the world—" that is to say, if, in addition to the teaching that Christ came to save sinners, we tell men that the rejection of Christ involves eternal punishment, then the Gospel which we preach ceases to be a message of glad tidings. But the writer loses sight of the fact that the Gospel is a message of joy to men only in so far as they accept of and believe in Christ, nor does it profess to be such for those who refuse this acceptance. "A Layman" does not tell us what his own views are with reference to the destination of the impenitent. I gather, however, from his letter, that he believes that they will finally be annihilated. But surely he cannot maintain that this doctrine is any more deserving of the name of "glad tidings" than is the common teaching of the Church. If, when I say to a man, "believe in Christ and you will be saved, or reject him and you will be for ever damned," I fail to preach glad tidings to him, no less shall I fail to do so if I say to him, "believe in Christ and you will be saved, or reject him and you will after a limited period of suffering be annihilated." To the Believer the message is the same in both cases—to the unbeliever it is a warning of punishment differing only in degree in the one case and in the other. I hope we shall hear further from you and your correspondents on the subject.

E. P. NEWTON.

III.

To the Editor of the Friend of India.

SIR,—In your issue of September 18th, you have an article on "Eternal Punishment," from which the following is an extract:—

"Is the doctrine true or false? Is it taught in the Bible, or is it simply a human tradition? We hold the doctrine to be an impiety and blasphemy, a doctrine not taught in the Bible."

Rather more of a sweeping declaration than I should have expected from the man capable of editing the *Friend of India*. But let that pass. "Is the doctrine taught in the Bible?" *That* is the question. I am glad you have presented it in this way. For some fifty years I have been honestly believing and preaching this doctrine, that it *is* taught in the Bible. Now, if during all this time, I have been preaching "impiety and blasphemy," it is certainly a very serious matter, and a great wrong. If I have been wrong, I wish to see it and retract as soon as possible—confess and forsake before being called to my final account.

But I can see nothing in your article to shake my faith. I find there nothing from the Bible itself to show that the doctrine is not true. And on this point, mere human opinions weigh nothing in my mind.

"Is it taught in the Bible?" That is *the* point at issue.

"To the law and to the testimony, if they speak not according to this word, it is because there is no light in them."

Matt. III. 12. "Whose fan is in his hand, and he will thoroughly purge his floor, and gather the wheat into the garner; but he will burn up the chaff with unquenchable fire."

Fire that is unquenchable must continue to burn.

Matt. XXV. 46. "And these shall go away into everlasting punishment; but the righteous into life eternal."

The original word rendered *everlasting* in the first clause is the same as that rendered *eternal* in the second clause. So that the punishment of the one class must be just as long as the happiness of the other.

Mark III. 29. "But he that shall blaspheme against the Holy Ghost hath never forgiveness, but is in danger of eternal damnation." A man cannot be in danger of that which does not exist. But the Saviour Himself says of a certain person that he "*is* in danger of eternal damnation."

Jude 7th verse. "Even as Sodom and Gomorrah, and the cities about them, in like manner giving themselves over to fornication, and going after strange flesh, are set forth for an example, suffering the vengeance of eternal fire."

Here the persons spoken of are not in danger of, but are actually "suffering the vengeance of eternal fire." That the idea is appalling I admit; but that is not the question now under consideration. The reasonableness or propriety of the doctrine is a very different question; and not the one now before us. Let us stick to our text. "*Is it taught in the Bible?*"

Mark IX. 43-48. "And if thy hand offend thee cut it off; it is better for thee to enter into life maimed than having two hands to go into hell, into the fire that never shall be quenched; where their worm dieth not, and the fire is not quenched.

And if thy foot offend thee cut it off; it is better for thee to enter halt into life than having two feet to be cast into hell, into the fire that never shall be quenched; where their worm dieth not, and the fire is not quenched. And if thine eye offend thee pluck it out; is is better for thee to enter into the kingdom of God with one eye, than having two eyes to be cast into hell fire; where their worm dieth not, and the fire is not quenched."

Such language needs no comment. It is simple, positive, and easy to be understood.

Rev. XIV. 11. "And the smoke of their torment ascendeth up for ever and ever."

The above passages are a few of the *positive* declarations of the Bible on this point. If language is capable of expressing the idea of "eternal punishment," such language is found in the above quotations. "Eternal damnation"—"Eternal fire"—"Torment for ever and ever"—"Fire that never shall be quenched"—These are not the words of man, but of Him, who spake as never man spake.

There are other portions of the Bible, which clearly teach the same doctrine. Look at that large class of passages called the promises. Now the promise of a certain good on a certain condition, implies that if the condition be wanting the good is not only lost, but the opposite evil must be endured.

Suppose I am suffering for the want of a Thousand Rupees, and you in the kindness of your heart, send me a note, saying, "Call at my office to-morrow at 10 A. M., and you shall have the Thousand Rupees."

Now that promise would clearly imply that if I did not call, I should not only be without the Rupees, but have to suffer for the want of them.

So when God promises us eternal life on condition of faith in Jesus Christ, it is clearly implied that without that faith we not only lose eternal life, but must suffer the opposite evil—eternal death.

Again, from Genesis to Revelation, the Bible presents mankind before us in two great classes, the "righteous and the wicked." The one class walking in the "narrow way to life," and the other in the "broad way to death."

This fact the Saviour has presented to us, in that wonderful passage of Luke XVI 19-31, in most clear and forcible language, too plain and simple, it would seem, to be misunderstood by an honest enquirer after truth.

Here we have presented the future happiness of the one class, and the future misery of the other, with an impassable gulf between them. The one state of existence equal to the other as to the time of continuance,

I will only add the remark of a pious negro, containing much truth on this subject, which he made to an unbeliever, thus,—

"Well—Sir,—I have a great advantage over you; because if your way should prove true, I am as well off as you are, at any rate. And if my way should prove true, your case would be dref-ful."

D. L. BRAYTON.

"THE TREE OF LIFE."

To the Editor of the Friend of India.

SIR,—In an editorial on this subject in a late issue of the *Friend* you say "that the Bible is not merely imperfectly understood but largely misunderstood, has been long *our* belief;" and then you say "that the immortality of the soul is *spoken* of only in the Bible as the *gift* of Eternal Life." But surely this is directly *taught* in the Bible by our Saviour, when he says to the woman of Samaria: "If thou knewest the *gift of God* and who it is that saith to thee, give me to drink; thou wouldest have asked of Him, and He would have given thee *living* water," John IV. 10; and in the 14 *v.* he explains that this water "shall be in him a well of water springing up into *everlasting life*," and in ch. X. 28 *v.* Christ says "and *I give unto them eternal life*" and in verse 10 He had said to the Jews "I am come that they might have *life*, and that they might have it more *abundantly*." And what *this life* is the Apostle St. John explains in ch. XX. 31 *v.* "that you might believe that Jesus is the Christ, the son of God; and that believing ye might have *life* through His name." The teaching of all the apostles is the same. St. Paul says, Rom; V. 21 *v.* "even so might grace reign through righteousness unto *eternal life* by Jesus Christ our Lord" and ch. VI. 22 *v.* "ye have your fruit unto holiness, and the end *everlasting life*" and verse 23, he says: "For the wages of sin *is* death"—he says not everlasting death or torments, but the common death of all men as understood by Moses in Numbers XVI. 29 *v.*—"but the gift of God is *eternal life* thro' Jesus Christ our Lord." And in Eph. II. 8 *v.* "For by grace are ye saved *thro' faith*; and that not of yourselves, it is the *gift* of God." And so St. Peter I. Epistle, chapter V. 10 *v.* "hath called us unto His *eternal* glory by Jesus Christ, and II Epistle chapter I. 11 *v.* "For so an entrance shall be ministered unto you *abundantly* into the *everlasting* Kingdom of our Lord and Saviour Jesus Christ" and so St. John I. Epistle chapter V. 11 *v.* "and this is the record, that God hath *given to us eternal life*, and *this life* is in His Son;" and St. James, chapter V. 19 and 20 *v.*, and St. Jude 21 *v.* "Keep yourselves in the name of God, looking for the mercy of our Lord Jesus Christ unto *eternal life*."

That Adam was not created *immortal* is evident from Gen. II. 17 *v.* "for in the day that thou eatest thereof thou shalt surely die;" he was then liable to death, and the breath of life breathed into him, 7 *v.*, was not immortality, but as St. Paul says, II. Timothy I. 10 *v.* "but is *now* made manifest by the appearing of our Saviour Jesus Christ, *who hath abolished death*, and hath brought *life and immortality* to light thro' the gospel." If our Lord and His Apostles thus taught, and the great Apostle could say as he was *finishing his course*: "This is a faithful saying and worthy of *all* acceptation, that Christ Jesus came into the world *to save* sinners, of whom *I am chief*;" what possible good is to be obtained by any modern Churches driving men to despair and hatred of God by preaching that Hell and eternal damnation are the lights of the glorious gospel of Our Lord and Saviour Jesus Christ? Now as to misunderstandings and misinterpretations of the Scripture, I beg to send you a few notes I had made in reading Gibbon's famous 15th chapter over again. Of the Jews he says "the sullen obstinacy with which they maintained their peculiar rites and *unsocial manners* seemed to mark them out a *distinct species of men*, who boldly professed or who faintly disguised their implacable hatred to the rest of the human kind," and as "usual with him, in a note, after quoting from Juvenal," he adds, "the letter of this law is not to be found in the present volume of Moses." This Dean Milman corrects by a reference to Duet. X. 18 and 19 *v.* but it is totally at variance with Leviticus XIX. 18 *v.* "but thou shall love thy neighbour as thyself: I am the Lord" and Numbers Ch. XV. 16 *v.*—"*one Law and one manner* shall be for "you, and for *the stranger* that sojourneth with you," and how this ought to have been interpreted by their teachers our Saviour explains in Luke X. 36 and 37 *v.* According to Gibbon, Christ literally taught the near approach of the end of the world, but he evidently tried to lead men away from the idea *they* entertained on this subject, as in John XXI. 22 *v.* and Acts Ch. 1, 6, 7, *v.* he warned them to be sober and to watch, for this knowledge would not be given to them, and because men would not believe, Christianity is to blame!

Again "The use of marriage was permitted to his *fallen posterity* as a *necessary* expedient to continue the human species &c.," which is not only limiting the powers of an Almighty Creator, but is directly opposed to the Bible account in Gen. I, 27 & 28 *v.* and II. 25 *v.*, and as expounded by our Saviour in Matth: XIX. 4-6 *v.* Gibbon has only one idea in regard to the works of the flesh, and that the grossest possible. Of the *fruits* of the spirit as contrasted with them by St. Paul in Gal. V. 19—21 *v.* he apparently knows nothing—with him gross intemperance amongst the savage Germans allows of the most chivalrous conduct towards women and the greatest chastity; but as soon as any savages become Christians intemperance produces effects which cannot be mentioned. He has ignored the introduction of Bishops into the Church as described by St. Paul in 1 Tim; III. 1*v* and Titus 1.7 *v*, and the purpose of this institution, but any failings of the Bishops in *after* times he seizes upon as the *fruits* of Christianity.

Gibbon says "and it was *always* by slow and painful gradations that the sinner, the heretic, or the apostate was readmitted into the bosom of the Church"—how different to the teaching of the Bible in Luke XXII. 61 *v.* & 62 *v*, John VIII. 11 *v.* Mark XVI. 7 *v.* and 2 Cor. II. 6 and 7*v.*, but this he describes as the constant practice of the Christians, and apparently sanctioned by their religion.

Again he says, "sometimes we might imagine that we were "listening to the voice of Moses when *he commanded* the earth to "open, &c." which is as directly opposite to scripture teaching as it can well be, for in Numbers XVI. 28 *v.*, we read "and Moses said, "Hereby ye shall know that the Lord has sent me to do all these "works; *for I have not done them of mine own mind*" and in verse "30. But if the Lord *make a new thing* and the earth open her "mouth &c.," and in chapter XX. 10 *v.*, on the *first* occasion in which Moses and Aaron presumed to say to the children of Israel., "Hear now, ye rebels; *must we* fetch you water out of this rock?" the sentence was passed on them that they should not lead that people into the promised land, which is a very different account from what Gibbon gives, who appears to think Moses was like one of our modern Popes, always loudly proclaiming his own infallibility, and not what the Bible describes him to have been "very meek, above all *men* which were upon the face of the earth."

Gibbon declares his intention to be to make "a candid but *rational* inquiry into the progress and *establishment* of Christianity," but of this latter purpose he soon takes leave, and ignores altogether the teaching of Christ and His apostles. Of the former he makes all the use he can.

It would not be difficult to show that his XVI chapter is equally prejudiced, and that the persecution of the Christians was an act wholly opposed to the ordinary feelings of mankind in general, for Pilate wished to let our Saviour go, and could find no cause of death in Him. Gallio cared for none of those things, or the town clerk

of Ephesus, or Claudius Lysius or Festus, but when "it was *expedient*," for those in authority, that some men should die, a sect like this were certain to be marked, and therefore there is no such great improbability in the matter as he insinuates; but this chapter of his should always be read with his XXIII., in which he describes "the vanity and superstition," which led Julian to persecute the Christians, and if his favorite hero could do this, why should not others *in his position* have done the same for expediency?

A. B.

THE NEW ASSESSMENTS IN BOMBAY.

To the Editor of the Friend of India.

SIR,—Your article on the new assessment in Bombay, in the *Friend* of the 25th ultimo, affords an opportunity of making some remarks on the whole land Revenue system of India, of which I would gladly avail myself with your permission, and considering the importance of the subject, I feel certain you will not think I am intruding too much on your space, however much I may differ in opinion from you on the matter.

You say "the assessment which the land will bear depends largely upon *the prices* of the common food staples of the country," &c. In other words, the *products* of the land should be assessed according to prices as they prevail, which I submit is simply ignoring the whole theory of rents from land, and levying a tax on the industry of the agricultural classes and the food supply of the whole community, and this I cannot but think is the fundamental mistake we have made all through our land revenue administration.

In any condition of society, if the demand for agricultural products is such that only land of the class A, yielding 100, can be cultivated at the ordinary rates of profit for the capital employed on it, no other class of land will be taken up, and there can be no such thing as rent. To assess such land, never mind how lightly is simply to tax the industrial resources of the agricultural classes, and to raise the price of food to the whole community, and by increasing the cost of labor diminish profits all round in a country like India. If the assessment is also made to vary with every rise or fall in prices, every opportunity is afforded to the landholder, to exact as much as possible from the ryots in good years, and leave them to their own resources in bad seasons, a state of affairs we are becoming pretty familiar with. On the other hand, had we attended to the principles on which the theory of rent is based, every advance made by the society *must* have increased the revenue from the land, without its being a burden to any one. In the case above given, suppose a rise of prices to occur so that the class of land B. yielding 90 can be cultivated at the ordinary rates of profits to capital, the land A could then pay a rent of 10 and the cultivators of both classes, of land would obtain equal profits *without* any increase of price in the food supply, to cover the expenses of taxation, so that labor would then be as cheap as possible. Similarly if the classes of land C. D. E. &c., came into cultivation, yielding products of 80, 70, 60 &c. Under the same conditions of society we should have as below :—

A	B	C				
100	90	80	aggregate of products =			270
20	10	0		,,	Rents ...	30 or 1/9
A	B	C	D,			
100	90	80	70	,,	products ...	340
30	20	10	0	,,	Rents ...	60 or 1/6 nearly.
A	B	C	D	E,		
100	90	80	70	60 ,,	products ...	400
40	30	20	10	0 ,,	Rents ...	100 or ¼

And so on. Rents having increased from 1-19 or 5 per cent. to 11 per cent, 16 per cent, and 25 per cent, at every rise of price, or improvement in the means of cultivation and the profits to the cultivators increasing in the same proportion, no one is burdened, the land yielding a fair return to all classes employing capital in it, *and the rent*, as a mere instrument of production. This shews how wrong the principles are on which we have been assessing the land and so crippling the industry of all classes by enhancing the prices of food and the necessaries of life and making the *cost* of labour more and more expensive and less efficient.

Now omitting the consideration of lands possessing an exceptional value and commanding monopoly prices for their products, there are but two elements of rent, *viz.* fertility of soils and facilities of access to markets. As Mr. Mill observes, the very term "inferior lands" implies their deficiency in one or other of these respects. It is impossible in any other way to extend cultivation profitably but to omit these elements altogether; and to tax the products of any land cultivated—even when only supplying the bare necessaries of life—is perhaps as suicidal a policy as it is possible to adopt, and fully explains why the agriculture of India has been for ages in so backward and depressed a condition. And the sooner such a system is abandoned the more rapid will be the recovery of the country, but in how many of our numerous systems for collecting the land revenue in India have these fundamental principles been attended to? Have we not gone on taxing *the products* of the land till we had thrown it out of cultivation, and then had to make reductions to restore this, instead of making the land yield a rent and leaving the cultivators to enjoy in full the fruits of their industry? Had we expended 1-100th part of the time, labour and thought on making good roads, canals, and other irrigation works that has been wasted in adopting and writing up systems for collecting the land revenue—a most crude unscientific economic idea at least and only adopted to a very backward ignorant condition of Society—India would now be as well able to support railways as England, instead of complaining, *after* these works have been constructed, that there are no feeders to them, that they do not pay, and are increasing the debt and the Budget deficits year by year. But like boys and girls we fancy we can begin where our fathers and mothers left off, as if the land had never been cursed for our sakes, and we could obtain its fruits otherwise than by the sweat of the brow. Of course in advocating the taking of rent from land as laid down by all the English economists from Adam Smith to the present time, I assume there is perfect security of tenure, as they did. No cottier, zemindary or other system for fleecing the cultivators of every shilling and telling them to provide stock and labor to continue the process as long as possible, for the sake of a big landed aristocracy.

The subject is of such vast importance, the interests at stake so enormous with the rapidly increasing population in India, that I trust you will excuse the length of this letter; as you justly remark in the article above referred to, that the fall in the value of silver (money) will cause a very important rise in prices and of course of food. And what prospect does this hold out to the laboring classes of India *now* only existing from hand to mouth, diminishing yearly the wage fund of the country as no means are being adopted to enable stock to accumulate or to promote the growth of the country's principle industry? No rise of prices *only* can be of any benefit to the laboring classes, unless the products of the land are secured against destruction from the vicissitudes of seasons, and can be sent profitably to markets. The losses which the cultivators meet with, by the present arrangements, of assessing the land products at *fixed rates* for so many years or in perpetuity, must fall on the wage fund of the country, and a rise of prices of food means starvation to the laboring agricultural population as there is no other industry to which they can apply themselves. Railways can of course afford relief by carrying grain to threatened districts at the expense of the State; but is that any reason why the land should not be improved and made to pay full rents? The products of any large agricultural country, possessing no large town populations employed in trades, manufactures or professions, can only be profitably disposed of in the markets of the world; but as these surplus products are always raw and of great bulk and very perishable, they require to be carried at the cheapest possible rates to secure the greatest value; but by taxing these, and not affording cheap transport, we are simply burdening the land more and more, and leaving the laboring classes to mere chance for existence with the certainty of having to relieve them at the expense of the State each time a famine occurs. This fact cannot be much longer overlooked by the Government. It is only necessary to enquire into the average rate of wage of a cooly for a year and the average prices of food in any district to find that any rise of prices almost in the latter will so completely swamp the average wages that the population must be starving even if famine does not occur. The experience of England has shown us that high prices of food does not mean high wages but an abundant supply of food at the cheapest possible rates does mean better wages and greatly enhanced rents from land and conservative landholders when in power, as at present, *do not* advocate the abolition of Free Trade. Why then should we in India persist in adopting crude native ideas in the administration of the land revenue on principles which have been long ago exploded in all advancing civilized countries? It is perfectly clear that by assessing the products of the land according to prices we introduce a great element of uncertainty as to the charges the cultivators may have to pay, and so neutralize the effects of peace and good order established by the British Government. If the assessment is so much for a term of years, it is at best a hap-hazard arrangement; and if in perpetuity it is a positive injustice to the community to whom the land belongs and a breach of trust. If the cultivating classes do not know how much or what they may have to pay and have no means of access to the best markets *at all times*, at the cheapest possible rates, they must of necessity reduce wages to a minimum and only cultivate such lands as will afford them a profit: hence the laboring classes can only earn the most scanty subsistence and are liable to lose this even at any time. And can such a state of affairs be considered, satisfactory amongst apopulation of some 200 millions nine-tenth of whom belong to this class.

A. B.

THE WEEK.

MR. DAVID COWIE has once more been nominated a member of the Viceroy's Legislative Council,—an appointment viewed with great satisfaction by all classes of the community.

THE Sky Races at Barrackpore, which were prevented last Saturday by the heavy rain, will come off this afternoon, barring a similar accident, and are likely to be at all events amusing.

THE Assistant Harbour Master, who was in charge of the *British Viceroy*, when she sank just as she was going into her moorings a few weeks ago, has been dismissed from his appointment, and no one who has read the particulars can doubt the justice of the sentence.

IT is said by some of the English papers that among our other distinguished visitors this year will be Miss Thompson, painter of the "Roll Call." What a chance for Colonel Walton and his braves, or better still for Major Sterndale as Commandant of the Cavalry. His grey arab may yet become immortal, as well she deserves to be.

IT is telegraphed from London that Mr. Wade announces having obtained the necessary gurantees from the Chinese Government, and that Mr. Grosvenor, second Secretary, proceeds to Yunnan. If by guarantees, promises and assurances are meant, the result will be waited for with interest, if not with anxiety, at all events with anxiety for Mr. Grosvenor.

SOME comment has been made on recent sentences by our local Police Magistrates on brutes in human form who have been making vile assaults on women, and who have received sentences ludicrously nominal. The Penal Code of this country is fiercely severe on much milder crimes of similar nature; and if the sentences commented upon are really all that could be awarded, the sooner the law is looked into the better. The matter is certainly one that demands investigation in either case.

THE Viceroy has left Simla, gradually journeying towards Bombay, and Sir Henry Norman acts as President of the Council. The Duke of Buckingham sailed on the 16th for Madras, and the papers of that presidency complain that he has economically shipped a supply of tinned provisions to be ready on his arrival, instead of purchasing in the local shops. It is to be hoped he has secured a reliable man as A.D.C., for the supervision of such commodities has led to misery and heart-burning in India before now.

THE holidays are over at last, and the numbers of bronzed faces seen all about show to what good effect the rapid means of locomotion now available have been put. A trip to Europe could not have made a greater change in the activity, or imparted a greater degree of rubicundity to the countenances of, our hardworking citizens, than their fortnight's run to the hills has done. And yet the accounts of up-country correspondents speak of nothing but balls and amateur theatricals, the natural results of which are pallor and fatigue, but the tourists may have adopted means of getting the better of all that; and if so, they have been successful.

NOTWITHSTANDING all that has been written and said, on high authority too, about the salubrity of this climate for Europeans under proper precautions, there can be no doubt that in the army at least the waste of men keeps very serious; and it is remarkable that when cholera appears at a station, the military get the worst of it. Their comparatively idle life probably accounts for this, but that is an incident of their profession that cannot well be avoided; it is therefore very satisfactory to hear that Government have a plan under consideration to establish small depôts all along the Himalaya ranges, to which men may be sent in turn, either to recover from indifferent health, or to retain the good health they have.

IT is very nice to hear that our lively neighbours in Pondicherry are about to receive a Governor more to the national taste than he who has borne rule over them for some years past. The latter seems to have taken a gloomy view of things, but now dancing, singing, and *eau sucré* are likely to begin to reign again, and when next poojahs arrive, a trip to that colony may be the most pleasant one to take, seeing that midnight garden concerts seem still unattainable here. Chandernagore appears to have been dull this year during the holidays—quite an exception—and many of the Calcutta youths have been feeling sadly disappointed that a projected *tumasha* of boat-racing, concerts, and dancing, fell through from some cause or other. There is some reason to suppose that a principal cause was the fear that Calcutta young gentlemen might not comfort themselves with discretion; perhaps not a groundless fear.

ONE of the most sensible petitions, and one of the strongest reflections upon the unreasoning latitudinarianism of the newest improved system of education in India, is a petition presented the other day to the Lieutenant-Governor by the Dacca Philanthropic Society, presumably chiefly Mussulmans, praying Government to introduce the teaching of morality in all its educational institutions. The arguments used are very clearly put, and of great weight, and the petitioners state what has long been evident to others besides themselves, that "they themselves, with the rest of native society, are beginning to suffer from the consequences of the neglect of moral training among the educated native youths of Bengal." What a reflection on a so-called Christian and civilized Government. Instead of the wholesale destruction of religious principle, of every description, which has characterized the latest attempt at fairness between all castes and sects, how much more wise and statesman like would it have been to take hold of and work the principles of true morality and religion which underlie all systems, at least all systems which find place in this country. But the reply is very discouraging, and steers clear of the request. It is thought there can be no use of *teaching* morality, if breaches of morality cannot be punished. That being the case, why hold missionary meetings in the drawing-room at Belvedere, and get covered with glory for so doing?

NOW that the Prince of Wales is actually outward bound, the press of the whole continent of India, Calcutta excepted, can treat of scarcely a thing but the Royal Visit; and it is almost painful to take up a paper published outside the Mahratta ditch. In loyalty, and in a desire to do all honor to the illustrious visitor, Calcutta is behind no place, but elsewhere loyalty is degenerating into a sort of maudlin Jenkinism. Here we don't seem to have got beyond the white-washing stage yet; but then, to be sure, we are the capital, and always presentable. It is much to be feared the Prince will ere long have occasion to pray to be saved from his friends. Some of the native press have been pointing out the dangers he runs from fever, cholera, and even from more preventible misfortunes; but if all the entertainments laid out for him have to be gone through, he is likely to leave the country a broken-down man. Why cannot he be allowed to see the country as it is, and to enjoy what of enjoyment it can provide? Durbars for Rajahs and other great people, natives of the country, are perhaps necessary, but balls, fire-works, and foundation-stones, are no novelty to him, and can scarcely fail to be boring. The amount of work proposed to be put upon him seems already to be alarming the conductors of the expedition, and latest telegrams from home point to a desire for a restriction of the overabundant loyalty that is being shown. It is wonderful that none of the enthusiasts, in Madras especially, have taken means to get up a great fire, to give employment to the engines that are coming.

THE theatres continue to occupy the public mind largely, and while great sympathy is felt for Mr. and Mrs. Lewis in their bad luck, it is still becoming more and more clear that the popular current is against them, and that the light amusement of the Corinthian is to carry the day this season. English's company are to appear in similar pieces in addition to regular play, and with so strong a contrary tide, and with the certain inability of Calcutta to maintain three companies, it is clearly Mr. Lewis's interest to try elsewhere. There is Bombay, for example, where a good theatre is a rarity, and where it would most likely be well supported, and where moreover Mr. Lewis's Company were well liked. The Corinthians have continued to draw very respectable houses, and the attraction of Miss May is becoming stronger and stronger. A great variety of pieces has been given this week, and all have been very well done indeed. Miss May's singing in Martha was, if possible, more exquisite than ever. Robin Adair must have thrilled every nerve in the house. The Lindsay Street Company opened on Wednesday, and had a full house, but were very unfortunate in the piece chosen for their *début*. It was very uninteresting, and many practiced habitues of theatres were seen sound asleep in different parts of the house. It is very evident, however, that the company are of quite a superior class; in fact, it was chiefly known faces that appeared on Wednesday, the ladies at all events, but the piece gave no scope for exhibition of the powers of any of the performers. One great drawback was the badness of the acoustic properties of the house, which are very bad, and will require to be improved at once. However soundly some of the audience slept during the play, they became open-eyed and open-mouthed enough when the ballet came on, and no wonder! It was something quite astonishing, and words would fail to describe it. If imported from an English stage, the Lord Chamberlain must be dead.

THE rising importance of the jute spinning trade here has been watched with interest by all who have the permanent welfare of the country at heart, and strong hopes have been entertained by those best qualified to judge, even all through the recent depression in the trade, that Bengal would prove in time to be the chief natural seat of that great industry. It is therefore pleasing to find those hopes being confirmed by the fears of the spinners at home, and the following extract from the Scotch letter of a Madras newspaper may be reproduced here, and read with interest by many:—

"The latest advices from Calcutta have helped to spread alarm amongst the jute lords. They speak of very large shipments of bags and sacks to Australia,—a trade once of great value to Dundee. The number of looms in Bengal is stated in a recent letter as 3,910, (being about one-third of the number in Dundee, which is roughly estimated at 10,000 looms) and the current production as equal to 66 millions of sacks per annum. Both actually and prospectively, the mills in India are improving, while a pall of dull trade and gloomy foreboding hangs over Dundee. In extent, and in wealth, in importance, and in public spirit, the

town has been advancing with rapid strides; and it will be a cruel fate, should a reverse come upon her, to stop all this progress, and reconvert its spreading suburbs in the unpeopled fields they represented only ten years ago.

The general condemnation with which the late tariff alterations were received have had their justice well supported by the announcement that Sir Louis Malet, the commercial member of the Secretary of State's Council, is coming out to confer with Government on the changes complained of. It is very remarkable that Lord Northbrook's Government, which was expected *par excellence* to be an intelligent Government for the mercantile and trading interests of the country, has evoked a storm of indignation whenever it has meddled with commercial or monetary affairs.

MONEY MARKET.

FRIDAY, 22ND OCTOBER.

THE unwonted ease in money just previous to the holidays has been quite maintained all through them, and up until now, and the public demand on the Bank of Bengal has, during the last four weeks, which include only a fortnight's working, decreased by upwards of a crore of rupees; the items of loans and discounts have fallen to a lower point than has been seen during the last fifteen months, and the private deposits stand at a high figure. The Bank's cash balances are strong, and have increased 25 lakhs since previous statement, and the Government balances have now contracted to an ordinary amount. The whole position, therefore, is much more decidedly than it was a month ago, in favor of an easy money market throughout the cold weather. In Bombay money is becoming more abundant, and the resources there are being augmented by steady though moderate shipments of silver from Europe. On this side we have chiefly the Council Bills to look to, but we are receiving nearly the whole of the issues, and this market is likely to prove able to manage the heavy export business of the next few months without being hurt by the pressure.

A very large business in English Exchange has been done since the beginning of the month, chiefly in purchases from the Banks. Still the rate has steadily risen, and closes for this mail at a rise of three quarters per cent. over what it was for the mail preceding the holidays; that refers to the six months' rate, short remittance had a similar rise, but has gone back since yesterday morning, when the telegraph announced that Council Bills in London had not followed the rising market here. During the holidays, telegraphic transfer was negotiated at from 1/9 3/4 up to 1/9 7/8. Early this week the rate remained strong at 1/9 7/8, but business has subsequently been done at 1/9 13/16 and 1/9 3/4. For to-day's Mail all the six months' sight purchases have been made at 1/10 5/16, and three months at 1/10 1/8 to 1/10 1/16. Credits and open paper have brought 1/10 3/8 to 1-10 7/16, documents for acceptance 1-10 1 1/2, and documents for payment 1/10 9/16. The closing quotations are—

Bank Bills	1*s.* 10 5/16	at 6 months' sight.
Credit Bills	1*s.* 10⅜	
Document Bills	1*s.* 10 9/16	

Present prices of Government paper are exactly what they were this day three weeks, but very considerable business has been done this week, in the four per cents., at a slight decline, *viz.*, 101-12. This clearance has stiffened the market, and with prospects of easy money, and with prices of paper at present comparatively low level, a steady, if not a rising, market may be expected. Present quotations are—

4 per cents.	101⅞
4½ per cents.	102¾
5½ per cents.	108

The business for the going China steamers has been mostly settled at 219 to 218¾ per hundred dollars for thirty days' bills, but there was a little done, exceptionally, at 218½ and at 219¼. The closing rate may be called 219.

In commercial affairs there is nothing very remarkable to mention. In Cotton Goods a healthy steady business is now going on, and up-country accounts are favorable for a continuance of a satisfactory trade. The amount of sales since the beginning of the month has now reached a very respectable figure, although the *Lukhi* day itself was rather disappointing. In exports the tendency has been rather towards curtailment of operations. Seeds are in much less demand, and Jute transactions during the holidays amounted to some 5,000 or 6,000 bales, at easier prices. This week there is next to nothing doing in it. There is not likely to be another Tea Sale until after the end of the month, by which time it is expected that from 20,000 to 25,000 chests will have arrived at market.

Nothing further has been made public regarding Government intentions towards the Presidency Banks, but the new Charters will most probably be laid before the Viceroy's Council soon after it assembles here. Their determination to sell out their shares in the open market, though so ungenerous and even so unjust to their co-shareholders who invested in the Bank with quite a different understanding, is apparently a fixed and settled thing; and whether so or not, the matter has now been so fully discussed, and with such a striking uniformity of opinion, that it is needless to say anything more about it here. But if the shares are to be sold, it is very desirable to have that done in the way most likely to create the least amount of injury to the stock generally, and most likely to bring the best price to Government. A gradual supplying of the market, as proposed, would keep the shares very much depressed all the time the operation was in progress; it is always so when it is known that a large number of shares of any kind have to come on the market sooner or later: buyers stand clear, and prices droop. A better plan, we think, would be for Government to call for tenders, in the same way as is done when a loan is issued. The hope of getting in at a little below current market rates would likely tempt many people to apply for small lots, and the whole depressing weight would thus be removed from the market, before it had time, by its slow wearing action, to bring about a much lower range of value.

This depressing influence has been steadily working on Bank of Bengal shares, which stood at Rs. 1,420 a little over three weeks ago; and just before the announcement of Government, they are now 1,340 sellers, buyers standing aloof, and very little business doing in them. Although the National Bank's report is so favorable, showing a profit rate of 10 per cent. per annum, one-half of which only has been divided, the shares are not much run upon, but the share market altogether is so flat and lifeless, that the fact need create no surprise. Since the re-opening of business generally, the share market is about as neglected as if the holidays still continued. Any little enquiry there is goes on spinning mill scrip. The following are the principal of the few sales carried through:—

Bank of Bengal, 1,350, 1,340.
National Bank, 109, ½, 10, ½, 110.
India General Steam, 375, 380.
Singell Tea, 98, 9, 100, 102.
Bengal Coal, 1,375.
Equitable Coal, 225, 227½.
Barnagore Jute, 97, 98.
Howrah Jute, 75.
Budge Budge Jute, par.
Seebpore Jute, 76, 75.
Bowreah Cotton, 98, 96.

INDIAN INTELLIGENCE.

BENGAL.

THE Chief Commissioner of Assam makes his tour on the Sylhet side in November and December.

WE understand that it will take two years more to complete the splendid carriage road from Shillong to Gowhatti.

MR. MANGLES leaves Darjeeling for Calcutta on the 3rd proximo. The Bengal Secretariat Office will follow on the 5th.

WE hear on reliable authority that a marriage was solemnized the other day at the court of the Deputy Commissioner, Shillong, between a military officer belonging to the 44th Bengal Infantry and a Khassi woman. This bids fair for the Khassi ladies about the Assam capital.

IT is reported that Colonel D. G. Robinson, R. E., Director-General of Telegraphs in India, who is at present on leave in England, is to confer with the Board of Directors of the Eastern Bengal Railway Company as to the terms on which the Government wires are to be leased by the Company after the telegraph line of the railway has been transferred to Government.

NORTHERN INDIA.

RUPEES 45,000 have, we hear, been subscribed by the native community of Lahore for the purpose of giving a grand *feté* to the Prince of Wales.

THE late Sir Man Singh's estates in Oudh have long formed the subject of a heavy litigation. Lal Terloki Nath Singh is now declared his rightful heir.

IT is proposed to hold a fair at Lahore during the Prince of Wales's stay. An attempt will be made to exhibit the different products of the province.

THE piers for the Railway Bridge across the Jhelum are completed, and those across the Chenab are very nearly so. It is hoped that the Railway over both bridges will be opened by the Prince of Wales.

MR. PETER BRUFF, late Locomotive Superintendent of the Rajpootana State Railway, is to be the Deputy Manager of the Punjab Northern State Railway, and not an Engineer from the East Indian Railway.

WE hear great discontent expressed at the extraordinary course adopted by the Principal of the Roorkee College in sending the examination papers to the Head Masters of favored colleges instead of to some disinterested examiner.

HIS HIGHNESS the Maharajah of Putiala has bestowed a liberal gift, Rs. 10,000, on the Anglo-Mahomedan College. The money, we understand, is specially intended for secular purposes. A meeting will very shortly be held at Alligurh to complete the scheme of study to be adopted for the various branches of the college.

THE *Tufah-i-Kashmir* mentions that preparations on a grand scale are being made for the reception of the Prince of Wales at Jummoo. A special house is being constructed for His Royal Highness' accommodation. A large quantity of valuable shawls of rare texture and design, and valued at about Rs. 10,000 each, have been ordered. In addition to these presents, it is stated that a valuable sword set with precious stones and valued at Rs. 40,000, and a handsome gold chair and some tables inlaid with the same metal, are being constructed. It appears that some three lakhs of rupees have been set apart for these presents. Amongst the other preparations which are being made, we are informed that the Maharajah has ordered the metalling of the road between Sealkote and Jummoo. The Maharajah's troops are also all to be equipped with new uniform and accoutrements. A lakh of rupees have been set apart for fireworks and illuminations. It will be seen that no expense will be spared in giving the Heir-Apparent a right royal welcome.

IT was hoped that the Prince of Wales would enter Lucknow accompanied by a grand elephant procession. But it is feared, we see, that there will not be a sufficient number of animals procurable of a stamp suitable for the occasion. On the day of arrival, the 6th of January, H. R. H. will lay the foundation-stone of the monument that is to be erected, at the personal expense of the Viceroy, in testimony of the loyalty of that portion of the native army who fought and fell, shoulder to shoulder with their European comrades, in defence of the Residency. The same afternoon the Prince of Wales will receive the members of the ex-Royal Family and the principal Oudh Chiefs and native gentlemen. And afterwards there will be a *levee* at which the chief Civil and Military Officers of the Province will be presented to His Royal Highness. On the 7th the Talukdar's *fete* comes off at the Kaiserbagh, and early on the 8th the Prince proceeds to Unao for some shooting, returning to Lucknow the same day. On Monday H. R. H. will in all likelihood leave for Cawnpore *en route* to the Upper Provinces. Such with slight alterations will, we believe, be the Lucknow programme.

A SOMEWHAT serious dacoity occurred not many nights ago in a village on the Seetapore road, the principals in the affair being half a dozen well-known dangerous characters whom the police have been long in quest of. On this occasion they entered the house of one Bhagoo, a *Bunniah*, and it is supposed that access was facilitated by means of a window which was found open. The motive was of course plunder, but no property was lost, owing to the Police having got wind of the intended attempt, and arrangements were made for the reception of the gang. The Assistant City Superintendent proceeded to the spot at the head of a dozen constables a little before midnight, in anticipation of the arrival of the men, who were permitted to make good their entry unmolested, and as the work of stowing away *loot* at once commenced, the Police were enabled to surprise them in *flagrante delicto*. The robbers, all armed with heavy bludgeons, charged the police in a body, and as the constables were previously warned not to use their swords, they at first got considerably the worst of it. One man only was captured on the spot. Pursuit was made after the other miscreants, which resulted in two more being caught on their way home.

BOMBAY.

WE learn that the Hubshee, the ruler of Jinjeera, is to be at Bombay during the visit of the Prince of Wales. He will be accompanied by Mr. Crawford and Mr. Larcom, the Political Resident.

THE Postmaster-General of Bombay is about to take twenty months' leave, and Mr. H. E. M. James, C. S., Under-Secretary to the Bombay Government in the Revenue Department, is to officiate for him.

THE chief native constable of Anund, who was charged with bribery, was convicted by Mr. Wilson, full-power magistrate of Kaira, and sentenced to six months' rigorous imprisonment and to pay a fine of Rs. 50.

HOLKAR does not proceed to Bombay to meet the Prince of Wales, but will, with his sons, brother, and minister, and a large retinue, leave for Calcutta early in December, after welcoming Lord Northbrook next month in his capital.

A POONA paper says :—"An extraordinary rumour is prevalent in the city that on the occasion of His Royal Highness the Prince of Wales's visit to Madras, His Royal Highness will pay a visit to the Ex-Gaekwar of Baroda, and that he, the ex-Gaekwar, will be restored to his *gadee*."

THERE seems to be no doubt that the very heavy and continuous rain and floods which occurred in Oodeypore and the neighbouring countries were in part the causes of the recent flood at Ahmedabad. It was only, we hear, by great exertions that the dams of the Great Lake at Oodeypore were saved.

WE hear that the Maharajahs of Oodeypore, Jodhpore, and Jeypore, are making preparations to do all honor to the Viceroy when he visits their capitals during his rapid journey through Rajpootana. Lord Northbrook will be the first Viceroy or Governor-General who has ever been seen at Jodhpore or Oodeypore.

THE *India Portugueza*, of the 9th instant, says that from a letter received by that journal it appears that His Excellency the Governor of Goa intends coming to Bombay to pay his respects to His Royal Highness the Prince of Wales. He will remain in Bombay to take back with him to Goa his wife and daughter, who are expected to arrive shortly from Portugal.

DURING last month the notorious Allarukia Peerbhoy, whose name is known in connection with the London, Bombay, and Mediterranean Bank, was sentenced by Mr. Nairne, full-power magistrate of Tanna, to six months' imprisonment and to pay a fine of Rs. 500 on a charge of cheating Mr. S. A. Johnson. On the above conviction and sentence the accused appealed to the Sessions Court. After hearing the arguments on both sides, the Sessions Judge confirmed the conviction and sentence passed upon the accused by the lower Court.

HIS HIGHNESS THE CHIEF OF SANGLEE, in the Southern Mahratta country, has prepared a gold flower-pot, set with precious stones, for presentation to His Royal Highness the Prince of Wales. His Highness the Chief of Jumkhundee has a pair of gold bangles set with diamonds, and a valuable coffee-pot, with several other articles, of pearls. His Highness the Chief of Ramdoorgh will present a walking-stick specially made for His Royal Highness, and a gold flower-plate, both of which are also set with precious stones, while His Highness the Chief of Moodhole will present several valuable country-made ornaments.

THE *Bombay Gazette* says "it is finally arranged that the Nizam will leave Hyderabad by special train at 8 A. M. on Monday, the 1st proximo. H.H. will be due at Goolburga the same evening at 6 P. M., and will leave again at 8 A. M. the next morning for Poona, arriving in Bombay on the afternoon of the 3rd idem. Eleven special trains will convey H. H.'s suite, guards, horses, and carriages, from Hyderabad, and will commence to run next week. His escort will consist of 200 infantry and 100 sowars, who, with their horses, will proceed to Bombay by rail. Transit for 4,000 is indented for by the Nizam's Government, exclusive of a large number of people expected to travel on their own account."

A CASE somewhat similar to Regina *vs.* Pestonjee Dinshaw and Succaram Ragoba has for some time been going on before the Sessions Judge of Ahmedabad. Some six persons seem to have entered into a conspiracy to get rid of the Rajah of Rajana [in Kattywar], the means employed being of course *ilum*; but, before the plot was ripe, the culprits were apprehended. The preliminary enquiry took place before the Magistrate of Veerumgaum, and resulted in the prisoners being duly committed to the Court of Sessions in Ahmedabad. The Hon'ble the Advocate-General and Mr. Kharshadjee Nusserwanjee Wadia represent the Raja of Rajana, and Mr. Branson, assisted by Mr. Oomedlal Ruttonlal, pleader, conducts the defence.

IN recognition of the invaluable services rendered by him in procuring documentary evidence proving the right of the present Gaekwar of Baroda to the throne, Mr. Henry Prescott, Inspector of Police at Nassick, has been raised to the grade of Superintendent, and will be gazetted shortly in charge of the Punch Mahals district. In their resolution forwarding Rs. 400 as presents from Her Highness the Maharanee Jumnabhai and the Gaekwar, the Government of India have recorded their high sense of approbation of all Mr. Prescott did. To the last, while at Baroda, Mr. Prescott refused the acceptance of the present, although pressed hard by Sir Richard Meade to do so (Sir Richard promising to obtain the Viceroy's consent by telegraph), but coming with a resolution of Government he could not of course refuse it.

MADRAS.

MR. LOGAN, Collector of Malabar, was recently telegraphed for by Government, it is supposed in order to give his opinion on the question of the annexation of South East Wynaad to the Neilgherries. We understand that the petition has been discussed in Council, the discussion being favourable to the petitioners.

WE learn that the Chief of Pallitana has been requested by Captain Hunter, under instructions from the Political Agent, to remove the police guards that were placed on the Satroonja Hills, in connection with the present dispute about the temples belonging to the Sharwak community there, and that the Thakoor has complied with the requisition.

THE report that the Prince of Wales will visit Hyderabad is contradicted on "most reliable authority" by the *Deccan Times*. A communication from the Viceroy has, it seems, been received by Mr. Saunders, the Resident, stating that it is now too late in the day to make fresh propositions concerning His Royal Highness' tour in India. The preparations that were being made by the Nizam will therefore have to be discontinued.

HIS Grace the Duke of Buckingham has obtained the permission of the Home Government to remain an extra month or two on the Hills annually, should he feel inclined, more than it has hitherto been the custom to do. This may be mere *gup*, but we know that sundry houses have been secured by members of the staff, for residences and offices, from the 1st April next. If what we hear be true, our Madras contemporaries will doubtless belabour His Grace unmercifully, though we hardly fancy the Duke will be convinced that the enervating sultriness of Madras is more

suitable for gubernatorial duties than the bracing climate of Ootacamund.

WE are glad to state that the Kudakadavu Bridge was opened for traffic on the 8th instant by the District Engineer in person. This bridge spans the broad and deep tidal backwater on the eleventh mile from the Cannanore Fort on the road to Tellicherry. The spot has earned some notoriety for the difficulty and delay caused to travellers ever since the old bridge was washed away some years ago. The new bridge consists of twenty-three bays or spans, 22 feet 10 inches each. The total length of the bridge between abutments is 5,251-6 feet, and the clear width of roadway is 14 feet. It is composed of wrought-iron plate girders, 18 inches deep, resting on 44 wrought-iron screw piles 4 inches in diameter, which are screwed firmly into the bed of the so-called river. The transverse beams or joists are 7 by 4 inches wrought-iron rolled beams, 3 feet 9 inches apart, which support Mallet's patent buckled wrought-iron road way plates, and these are covered with asphalte and road metal to a depth of 6 inches. The hand rail is composed of cast-iron standards 3 feet 9 inches apart, in which are fixed wrought-iron tubes and bars forming a strong but neat and light handrail. The centre piles have a rise of 4 feet 6 inches from abutments, giving to the whole bridge a very light and pleasing appearance.

CEYLON.

THE Colombo Chamber of Commerce have issued the returns of coffee shipments in the season 1874-75. The total export is short of the million by 32,300 cwt; plantation coffee has been exported to the extent of 135,000 cwts. above the average of the past four years, while native exports last season were 11,000 cwt., below the average. The total of plantation coffee shipped between 1872 and 1875 was 2,843,226 cwt., giving an average annual shipment of 710,806 cwt. The quantity of native coffee shipped in the five years was 497,080 cwt., giving an average of 124,270 cwt. or a total average of 835,076 cwt.

THE Woes of the Wallahs of the Indian Civil Service must seem enviable to the Civil Servants of Ceylon, who have to exist on a miserable pittance. So poor are they that few of them have felt justified in subscribing to the Prince of Wales's Reception Fund. One of them, writing to a Ceylon paper, says "the Ceylon Civil Service yields to no class in the colony in loyalty, and that their means will not allow them to give the same expression to it as other sections of the community, reflects rather upon the generosity of the Crown than on the liberality of its servants. It is well known that the salaries of Junior Civil Servants are wretchedly insufficient, and that it is all that many of us can do to make ends meet, and if we are to be just before we are generous, I do not see that we are called upon to subscribe to the Prince of Wales' Fund."

THE *Ceylon Times* says that the irrigation works which have been undertaken in Ouvah are proving a success. The lands watered from the Horamboraweva tank have been taken up, and are now paying assessment. The Kudaweva tank was complete at the close of last year, and is irrigating three ranges of paddy fields. The Assistant Government Agent tells our contemporary that, encouraged by the success of the Horamboraweva, a large land-owner in Soranatota Korale has made application for a loan under the Governor's scheme for the irrigation of his lands from the Badulla Oya, and another native, a resident of Alutnuwara, has applied for one hundred acres of land irrigable from the Hepola Oya near Bubule. Both of those applications are under consideration, and Mr. Sharpe hopes that they will be followed by others in various parts of the country, so that Uva may secure a fair share of the annual votes for irrigation.

BURMAH.

THE floods at Thayetmyo, which are subsiding, have left large accumulations of sand behind them, so that the navigation has been rendered extremely difficult; and there are fears that steamers will not be able to anchor near the town when the river falls to its lower level.

IN a report upon certain prize articles exhibited at the Shwegyeen District Agricultural Show, and sent by the Assistant to the Secretary to the Chief Commissioner to the Agri-Horticultural Society, we note that special mention is made of a parcel of *gutta percha*, which is described as an excellent sample, and which has been sent to England for report. The Deputy Commissioner, in reply to a communication asking for specimens of the dried leaves, flowers, &c., of the tree which yielded this product, said that the sample was brought from Beeling (a distant sub-division of his district) and that some time must elapse before the Society's request could be complied with. He gave the Burman name of the tree, however, as *taline-no-tsee*; and added that the Karens drank the milk, which they considered as good as cow's milk. Local enquiries have elicited the fact that the *taline-no-tsee* fruit, when in season, is for sale in the Rangoon bazaars. This goes to show that the tree may be met with about the Rangoon jungles, and has hitherto been unnoticed, save for the fruit it yields. Four samples of India-rubber, consisting of the cake specimens, which are the best, have also been sent to England for valuation and report. On the spot they were considered very fair and good, and their local market value has immensely increased. The creeper producing the caoutchouc is spread over all the jungles in the province, and, if carefully looked after, will render us independent of Upper Burmah, on which we have hitherto been dependent for a supply.

ASIA.

JAPAN has abandoned the idea of making a treaty with Siam.

THE Foochow-Amoy telegraph is said to be making rapid progress.

AN important proclamation has been posted at Foochow by the authorities, stating clearly the toleration accorded to Christianity under the treaties.

SIRDAR AYOOB KHAN is still at Meshed, where his principal occupation appears to be addressing remonstrances to the Shah regarding the inadequacy of the sum assigned for his support. Ameer Shere Ali Khan was recently sounded by the Persian Commander-in-Chief at Meshed as to the possibility of Ayoob's return to Cabul; but the Ameer was inexorable. "His flight," he said, "was not good in the beginning; now there is no use in his return."

IT is said that the Government of Persia now declares itself dissatisfied with the Convention drawn up in 1873 by Raschid Pasha, and then agreed to by the Persian Minister as the basis of the Commercial and Judicial Treaty, for the negotiation of which it was the object of the Shah's visit to Constantinople to prepare the way. Events have, it seems, re-awakened in the Shah's mind a desire which he entertained two and-a-half years ago, *viz.*, that Persia should be placed on an identical footing with the Western Powers in all points, commercial, political, and judicial, which are covered by the capitulations.

MILITARY.

WE believe that on or about the 28th of November Lady Napier leaves Simla with Lord Napier, homeward bound.

THE consent of Government, obtained through the Commander-in-Chief, will in future be necessary to the transfer of any house, building, or property, situated within cantonments, to a native, should its value exceed Rs. 5,000.

DURING the regimental sports held at Thayetmyo on the 27th ultimo, one of the competitors in the "Picking-up-stones" race fainted at the finish; he was at once taken to the hospital, where he expired almost immediately. The sports were therefore postponed for a couple of days.

REVISED Tables of camp equipage, carriage, and establishments, authorised for the native army of the Bengal Presidency on both ordinary movements and field service, have been approved of by the Government of India, and are published in General Orders by the Commander-in-Chief.

IN connection with the importance of railway transport to the military strength of India, the Commander-in-Chief has called the attention of Government to the desirableness of having all railway vehicles so designed that they may be applicable for military purposes as well as for ordinary traffic.

GOVERNMENT has ruled that the staff pay drawn by an officer officiating in a regimental staff appointment, who may be a candidate for civil employ, should be continued to him from the date of quitting his regiment to the date on which he passes the preliminary examination, as such absence can only be looked on as *absence on temporary duty*, during which the absentee's *regimental duties should be provided for regimentally.*

IT will interest the subscribers to the "Tombs Memorial Fund" to learn that the sum of £1,650 has been collected, of which Rs. 14,300 were contributed in India. The Indian and English committees, in accordance with Lady Tombs' wishes, have determined with these funds to establish a scholarship at the Royal Military Academy, and to erect a handsome and suitable tablet to the memory of the late Sir Henry Tombs in the Garrison Church at Woolwich.

THE following is the programme of the movements of H. M. Indian Troopships, and of the hired transports to be employed during the season 1875-6:—The *Euphrates* will arrive on her first trip at Bombay on the 1st November with the 14th Foot besides drafts, leaving on the 14th of the same month with the 36th Foot and time-expired men. On her second trip she will arrive on the 7th February with the 14th Hussars and drafts, returning on the 23rd with the 55th Foot for Aden, where she will embark the 2-25th for England; she will also take the 1-23rd R. A., besides time-expired men and invalids. The *Malabar* will reach Bombay on the 15th November with the 1-25th Foot and drafts, returning on the 28th with the 107th Foot and time-expired men. She will reach Bombay on her second trip on the 23rd February, with the headquarters and six batteries of the 21st R. A. and drafts, returning homewards on the 8th March, with the 76th Foot and invalids. The *Crocodile* will arrive on the 1st December with the 33rd Foot and drafts; taking home on the 15th of the same month the 18th Hussars and time-expired men. She returns to Bombay on the 8th March with the 2-16th Foot and drafts; returning on the 23rd with invalids. The *Jumna* will reach Bombay on the 17th December, bringing the 1-21st R. A. and drafts, and return on the 31st with the head-quarters, and Nos. 2, 3, 4, 5, 6 and 7 batteries of the 23rd Brigade, R. A., time-expired men and invalids. On her second voyage she will arrive on the 24th March, with drafts only, and take home, on the 7th April, invalids. The first hired transport will leave Bombay on the 15th or 20th January with time-expired men; the second will leave after the sailing of the last troopship, that is, in April, with invalids; and the third transport will leave Madras in March with invalids.

LORD NAPIER OF MAGDALA has signified his intention of bestowing the following prizes for rifle competition by the regiments of British Cavalry, batteries of Royal Artillery, and regiments of British and Native Infantry, serving in the Bengal Presidency.

The first will be a "carbine prize" for Royal Artillery and British Cavalry, and will consist of a sword, valued at £10. Every non-commissioned officer and soldier will be allowed to compete for this in the first course, five shots, distance 200 yards. Entrance one rupee. The twenty men of cavalry regiments and five men of artillery who made the best scores at this distance in each regiment or battery, will be considered as champions, and they alone will compete in the second stage, five rounds each, standing at two hundred, and five rounds each at 300 yards. The best shot to receive

the first money prize besides the sword. The whole of the entrances will be divided into money prizes for the rest of the champions.

The British Infantry will receive two prizes, the first to be a cup, value £70, and the second a watch, value £20. The first distance at which all will be allowed to compete will be 500 yards, five rounds, one rupee entrance. The twenty best shots of each regiment will then compete at 500 and 600 yards, five rounds each ; the highest aggregate score by twenty champions of any regiment or garrison battery to take the cup, and the individual who makes the best score in the second stage of the match will win the watch.

The Native Infantry prize will consist of a gold medal, accompanied by a purse of one hundred rupees, the money to be divided among the twenty champions of any regiment making the highest score at the two distances of 500 and 600 yards, five rounds each. The gold medal to become the property of the best shot of the team and be worn by him. All entrances at four annas each to form money prizes as in the first two cases.

GENERAL.

COMPLAINT is made by the *Diario Espanol* of the manner in which the wife of Don Carlos was allowed to cross the frontier into Navarre in sight of the French gendarmes. Saballs, his two sons, and several Carlist leaders, are said to have entered France on the 11th.

IT is stated by the *Correspondencia* that the Papal Nuncio addressed a note to the late Spanish Government, in which he requested the execution of the Concordat of 1851, the payment of the arrears due to the clergy, and the nomination of bishops to the vacant Sees, and that he was assured by the Ministers that it was impossible to entertain such claims.

ACCORDING to various telegrams on the never-ending Carlist movement, Don Carlos is in the neighbourhood of Elizonda. He has appointed Count Gaserta commandant of Guipuzcoa, *vice* Egana, dismissed. A body of 3,000 Carlists is said to have crossed the frontier into France, and will be interred by the French authorities.

INTELLIGENCE received from St. Petersburg states that General Kaufmann occupied Khokand on September 16th, meeting with no resistance. The greater portion of the Russian troops remained in he fortified camp outside Khokand. All Russian prisoners have been set at liberty, and the Khan has agreed to all the conditions of peace demanded by the General.

CONSIDERABLE anxiety is beginning to be felt as to the welfare of that gallant African explorer, Lieutenant Campbell. It is known that Eastern Africa, like almost every other part of the earth, has lately been visited with heavy floods, and if bad weather has prevailed west of Tanganyika, which is very probable, he may have had to encounter serious difficulties.

THE Peninsular and Oriental Company have contracted with Messrs A. Stephen and Son, of Glasgow, for a steam vessel of 3,400 tons and 600 horse-power, to be ready for sea in six months, and have purchased two steam vessels of 3,000 tons and 500 horse-power each, built in 1873, by Messrs. Caird and Co., of Greenock, for the North-German Lloyds' Company.

IT is stated that the amount of topographical and revenue survey executed in India from 1847 to 1873 was 743,802 square miles, at a cost of £2,002,883. Dr. Oldham and the staff of the Geological Survey, in spite of all difficulties of climate, inaccessibility of districts, and slowness of mode of travel, have examined in twenty-three years an area of country four times as large as the United Kingdom.

TELEGRAMS from Philadelphia to New York announce that the town of Indianola, in Texas, had been almost destroyed by a violent storm. The sea was, it seems, driven into the streets until they were six feet deep in water. Whole families perished, and bodies have been found for twenty miles along the coast. Much suffering prevails among the survivors, and assistance has been sent to them.

THE trial at Naples of the man Carmine Paisano, on the charge of having assassinated the English gardener, Mr. Hind, was concluded on September 17th at the Assize Court. The Jury found the prisoner guilty, and the court sentenced him to sixteen years' hard labour and five years' subsequent police surveillance. This was the sentence asked for by the public prosecutor on the Jury's decisions being given.

THE soundings for the submarine tunnel between England and France are being carried on actively. Each evening the vessel which carries the commission returns to Dover, Calais, or Boulogne, and work is recommenced the next day. The Engineers, MM. Larousse and Lavallec, are perfectly satisfied with the results obtained, and so far nothing has occurred to destroy their previsions relative to the depths.

WE have it on good authority that the following reductions in the "Survey Parties" for this year are about to be made, *viz.*, two parties in the Great Trigonometrical Survey of India are to be given up ; two in the Topographical Survey of India ; and four in the Revenue Survey : making in all eight parties out of about thirty originally contemplated ! These reductions have been made in order to carry out Lord Northbrook's views on the subject of the expenditure in these departments.

THE German Emperor, accompanied by the Crown Prince, Prince Frederick Charles, and Field Marshal Count Moltke, arrived at Rostock on September 19th, *en route* for Berlin. The Grand Duke of Mecklenburg-Schwerin awaited His Majesty at the station. At the palace His Majesty was received by the Grand Duchess, the Dowager Grand Duchess, the Mecklenburg Princess, and Generals. The Emperor was enthusiastically greeted by the populace at Rostock, and also at all the stations along the route.

NEWS has reached Madrid that General Casol's brigade has beaten a band of 3,500 Carlists under Gamundi, the latter losing many killed and wounded. The Carlists retired into the town of Tremp, where they were, however, surprised by the Royal troops during the night, but succeeded in escaping to the mountains of Catalonia. It is added that the brigade under General Gamir has beaten a Carlist force, killing thirty-five and capturing nineteen, including the second in command. From Santander it is reported that Carlists continue daily to give in their submission.

ANOTHER PAPER MATERIAL.—According to the *Journal of Applied Science*, an experiment has been made at Countess Weir Mills, Exeter, in manufacturing paper from the Australian papyrus or sand rush, and although the quantity made was very small, the trial was regarded as very successful. About 50 reams of demy, weighing about 8 cwts., were made from 19½ cwts. of the raw fibre. Owing to the paper having to be made rather hurriedly, no lime was allowed to run off the bleach and cleanse the material, as is generally done in paper-making, consequently the sample shown contains, we are told, more bleach than there should be.

A CORRESPONDENT at Alexandria writes:—A new source of revenue is now being developed by the Egyptian Government from the extensive salt deposits at Shaloof, in the neighbourhood of the Suez Canal. The salt is found in solid layers averaging six feet in depth, and extending over several thousand acres of ground. This valuable property, the importance of which is now for the first time being realised, has of course been appropriated by the Government, who have contracted for the annual shipment to India of 50,000 tons. The land surrounding other portions of the canal presents the appearance of possesssing deposits of salt equal in richness to those of Shaloof.

THE presents which the Prince of Wales is bringing out to India will not all be of the "jewels wrapped in small parcels" description. He has ordered eight fire engines from Messrs. Shand and Mason, which have been made expressly to stand the Indian climate. "The works are entirely of gun metal and copper, and the wood is well-seasoned teak, and everything is finished in a superior manner. The garter and collar of His Royal Highness the Prince of Wales, and the Star of the Order of India, are emblazoned on each engine." It is not stated for whom these engines are intended, nor whether the Prince will astonish the natives by working the engines himself.

AT Ouchy M. Thiers may be seen every morning at an early hour emerging from the Beau Rivage Hotel for a constitutional walk along the side of the lake in the direction of Lutry. Two Englishmen, aware of this, recently took a small row-boat, and paddling along to a point where M. Thiers had to climb slowly, with the aid of his attendant, they there waylaid him by bringing their boat in close juxta-position, hoisting the tricolor at the stern, and deferentially raising their hats. The veteran statesman courteously returned the salute, and with a searching look and pleasant smile remarked, 'Gentlemen, you are Englishmen.' To which they replied, 'We are, sir ; and we trust you will pardon an act of intrusion by which we sought only to do honor to one in whom we recognise the saviour of society in France.' To this M. Thiers rejoined, 'Gentlemen, I appreciate your compliment, but, alas, France has been only partially saved from the enemy, and still remains to be saved from herself, I fear ; but it is something at least that her misfortunes have obtained from her the sympathy and, I trust, lasting friendship of those who speak the English tongue. Gentlemen, I wish you a good morning.

A DISCOVERY has lately been made on an island in the Mississippi which shows that the aborigines of America were not wholly unacquainted with mechanical surgery, but occasionally wore wooden legs when deprived of their natural limbs. In a subterranean cave hewn out of a huge solid rock, which "had undoubtedly been made thousands of years ago," was found, among several other remarkable articles, a skull as brown as a polished walnut, perfect in every respect, and of extraordinary size ; also an almost complete skeleton with a wooden leg. The fastenings of the artificial limb consisted of petrified leather and bronze buckles. The original leg appears to have been removed half-way between the hip and knee. This discovery is regarded as extremely interesting, as not only proving that timber extremities were fashionable in early ages, but that a knowledge of bronze was among the learning of the aborigines. It is, however, rather painful to reflect that the state of society thousands of years ago had not even the redeeming point of being natural, but was artificial as at present, and that, in honouring the bones of our forefathers, we have often unconsciously been merely honoring their wooden stumps.

THE following is said to be the tour list for the disposal of correspondence for the Camp of the Viceroy :—15th to 17th October, Umballa ; 18th to 29th, Nynee Tal ; 30th to 31st, Bareilly ; 1st to 9th November, Bombay ; 10th to 18th November, Indore ; 19th to 25th, Neemuch ; 26th to 3rd December, Ajmere ; 4th to 6th, Jeypore. After the 6th, letters for His Excellency's Camp will be sent to Calcutta.

After Lord Northbrook's reception of the Prince of Wales at Bombay, he will, on the 10th November next, leave Bombay and arrive at Indore, the capital of Holkar, on the 12th idem, where he will be received with much pomp and circumstance by His Highness and General Daly. After paying a flying visit to the military station of Mhow, Lord Northbrook will start *via* Jowra h and Mandesore for Nusseerabad, which is by some likened unto Timbuctoo of the Sahara desert, owing to its situation in the midst of such a sterile country as Rajpootana. On arrival at Nusseerabad he will take train for Ajmere, and from thence for Jeypore, the capital of the Maharaja of that ilk. After participation in the hospitalities of Jeypore, the Viceroy will proceed to Calcutta, where he is expected to arrive on the 8th December. Owing to the Viceroy having to be present on the Prince of Wales reaching Calcutta in the *Serapis*, he will be unable to visit Ahmedabad, Deesa, and Mount Aboo, as was his intention.

In this tour Lord Northbrook will be accompanied by Miss Baring, who, it is whispered, is preparing for publication (after Lord Northbrook has relinquished the Viceroyalty of India) an "Indian Journal," to hereafter revive the reminiscence of a residence in India.

THE *Bombay Gazette* publishes the following letters from Mr. Stanley, dated—"On the *Victoria Nyanza*„ village of Kegehy," March 4th, 1875.

"Reached this place 103 days from Bagamoyo. Lost 182 men by desertion, disease, and war. Still left 166 men, most of whom are as brave fellows as I want. Deserters have been few compared to deaths. By vaccination saved many from small-pox. But dysentery and starvation killed them so fast that I feared for all hands."

"The Lady Alice (his boat in sections) after a march of 720 miles, is in first rate order, and has been our salvation once, saving us from a furious flood in Isamba. * * * Most of the countries I have traversed have been new, the names of which have never been heard of before. * * * * The youngest of the two brothers Pocock died in Itum of typhoid fever: other whites are well. * * * The dogs Castor, Captain, and New, are dead. We have had a war with the Watium, and Twenty-one of my men were killed in one day. We killed fifty of the enemy and wounded scores more, burnt their villages, and slaughtered their cattle. I have had two men murdered by savages unknown. But here we are 100 yards from the Lake, comfortably established, and still strong in numbers, guns, and property."

Second letter dated at same place, May 15th:

"Have just returned from circumnavigating the Lake Victoria; was obliged to fight four times. Discovered rivers, gulfs, bays, islands about 300, and the extent, length, breadth, and depth, of the Lake determined scientifically. * * * I have been nearly starved to death, once nearly drowned, and several times in danger from the savages. Fred. Barker is dead from intermittent fever; also a host of gallant blacks. Madruke, Speke, Ulimengo, and Frajallah Christie, are of the number. * * * Lady Alice still in good order. Frank Pocock well and strong. Am going to rest a while, then start the expedition for somewhere, have not determined where for yet."

THE *Temps* publishes the account of the recent interview of M. Thiers with one of the editors of that paper. M. Thiers expressed himself convinced that the European Powers are desirous of maintaining peace, and that they are generally favourably inclined towards France, mentioning in turn England, Italy, Austria, and Russia. He again referred to the clerical movement as the dark point in the horizon which seemed to carry away France, and thus made an unfavourable impression upon the foreign Cabinets. He believed, however, that the Ministry would be able to check the movement and smooth over any difficulties which might arise therefrom. Another dark point, he said, was in the East; but he hoped that Prince Milan would have energy enough, and the Skuptschina sufficient political sense, not to further complicate the question. He added that Prince Gortschakoff's presence in Switzerland was a sign that he had no fear of an unfavourable result. Speaking of the internal condition of France, he said that he believed it to be good, and that the elections would probably be held before the spring. He repeated that, on account of special circumstances, he was favourable to the *scrutin de liste* (voting by departments) as a means of eliciting a strong expression of public opinion which would render the opponents of the Constitution powerless.' However, he was certain that the verdict of France would be favourable to the Conservatives, and the results of the election satisfactory. He added that he would not seek for the suffrages of his fellow-citizens, but would accept the mandate that they might confide to him. At his age he only thought of preparing for death. He continued:—"Although I have been one of the most active men of this century and am still in possession of my faculties, I feel the want of rest; I am weary. The hour of retirement has struck. I must think of my memoirs. I commenced that work forty years ago, and as yet have only written a few notes. I wish at least to finish this before I die. It will be my last legacy to the French people."

LITERARY.

MR. GEORGE SMITH was to have started for the East, to resume his excavations at Nineveh, early this month. His new book on the "Chaldean Account of Genesis," which contains his recent discoveries, is in the Press, and will be shortly published.

MR. ERNEST LONGFELLOW, the son of the American poet; is an artist by profession. The *Athenæum* understands that he is about to publish a number of etchings of remarkable American scenes, and that his father contributes the descriptive verse to the volume.

MAJOR EVANS BELL is writing a biography of the late Lieutenant-General Briggs, whose death, at the advanced age of ninety, was announced some time ago. General Briggs' diaries cover a period of thirty-five years, terminating with the close of his career as an Indian Officer and British Resident at native courts. These diaries and other documents contain many interesting pictures of Oriental life and politics.

ECCLESIASTICAL.

A PARAGRAPH which has been going the round of the papers, extracted from a letter of the London correspondent of the *Manchester Guardian*, saying that it has been finally arranged to consecrate in India two Co-Adjutor Bishops for the Madras diocese, is contradicted by the *Madras Times*.

THE Rev. John Barton is about to resign the Agra Secretaryship of the Church Missionary Society. He will attend the Missionary Conference at Allahabad in December, and leave for England in January. The Rev. David Fenn is expected to return shortly from England, and, aided by the Rev. Mr. Macdonald, will conduct the duties of the Secretaryship till the arrival from England of Mr. Barton's permanent successor.

By order of the Directors,

(Sd.) R. HARDIE,

Secretary & Treasurer.

NOTICE.

THE CENTRAL ASIAN TRADING COMPANY,

BESIDES having in view the development of British commerce with the countries beyond our frontier in India, are desirous of establishing in the Punjab a warehouse upon the same principle as exists in London or any other large commercial city in Great Britain. Goods of every kind will be kept stocked in their warehouse at Peshawur for the purpose of enabling the English merchants of the Punjab (or any other part of India,) to select goods wholesale on the same principle as they now receive from England. The Company's produce coming direct from the Manufacturer must naturally offer advantages superior to what merchants so far inland are at present in the habit of receiving in dealing with Agents in England. The most favourable terms will be granted by the Company to merchants with whom they have business connections. The Company trust, by confining their business to wholesale transactions, that the European merchants of the Punjab (or any part of India) will appreciate their endeavours to open up a system of trade intercourse, which must eventually prove of immense benefit to the Company themselves, the retail merchants and the public generally.

The Company may not have the exact description of produce in stock, required by all the European firms with whom they hope to do business; they are however prepared to bring from England, without any delay, such goods as may be wanted provided the firm requiring the same will please to inform them of their probable yearly demands.

The Central Asian Trading Company offer the same inducement to the native traders of the Punjab, *i. e.* to supply them with every thing they require in their daily business transactions. Every attention will be paid by the Co mpany to the suggestions of native merchants in their dealings with the Company, so as gradually to introduce a system of trade intercourse which must prove profitable to all. The Company are prepared to receive barter in exchange for the produce of their warehouses, provided such produce is saleable either in the markets of India or Great Britain

Mr. Thomas Russell, Manager of the Central Asian Trading Company, will feel happy at all times to grant information to any one desirous of doing business with the Company; all letters should be addressed to Mr. T. Russell, Manager, Central Asian Trading Company, at Peshawur from 1st November to 30th March, and from 1st April to 31st October at Murree.

PROSPECTUS.

CENTRAL ASIAN TRADING COMPANY "LIMITED,"

CAPITAL £1,20,000,

WITH POWER TO INCREASE:

IN 12,000 SHARES OF £10, OR RS. 100 EACH.

Managing Director, Pro. Tem.

C. E. HERBERT, Esq.

Manager.

T. RUSSELL, Esq.

As soon as a sufficient number of shares have been taken up a full Board of Directors will be elected:—

Bankers in the Punjab.

THE PUNJAB BANK LIMITED.

Bankers in London.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Calcutta.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Bombay.

THE NATIONAL BANK OF INDIA LIMITED.

Agent in England.

GEORGE HOLME, Esq., PRESIDENT, DERBY CHAMBER OF COMMERCE.

Agents in Bombay.

Messrs. FORBES and Co.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

Murree, September 1875.

To

THE MANAGER_____BANK LIMITED

SIR

I enclose Rs._____being on account of my first call of Rs. 10 per share on _____shares in the Central Asian Trading Company Limited, and I undertake to accept that number of shares, or any small number, that may be allotted to me.

I remain,
Yours faithfully,

ADMINISTRATOR-GENERAL'S OFFICE.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India,* and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 *per year only, payable in advance.*

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

East Indian Railway.

No. 2083A of 1875.

Notification.

REVENUE DEPARTMENT.

Dated the 11th October, 1875.

MISCELLANEOUS.

THE following Notification regarding the sale of the Goverment tea plantations at Ayar Toli and Hawalbagh in Kumaun, is published for general information in supression of Notification No. 1707A, dated 21st August, 1875. *The portions of this Notification which are additions to or alterations of the former Notification are printed in italics* :

The following tea plantations in Kumaun the property of Government, will be offered for sale by public auction at the Senior Assistant Commissioner's Office, Almora, on Wednesday the 1st of December, 1875, at noon :—

HAWALBAGH.

Forty-six miles from the plains by bridle-road, and six from Almora. Area, about one hundred acres, after excluding the house known as Mr. Traill's with its compound, which will not be sold : said house and ground are in an outlying corner of the estate, and are to be set apart for travellers. Separated from the plantation by the Kosi river (suspension bridge) is a pine forest of one hundred and two acres, belonging to the estate, but in which neighbouring villages have the right to graze their cattle. The garden, having latterly been used as a nursery for fruit trees, the whole of the area is not under tea. There are on the estate two large slated houses (exclusive of Traill's house, *which will not be sold*), a slated factory, two slated godowns, a slated barrack for tea-makers, and numerous slated out-offices. The height of the houses above sea-level is 4,000 feet, and the lands are not much higher or lower. Upset price, Rs. 25,000.

Communications.—A good bridle-road, 8 to 10 feet wide and bridge, runs to (1) Haldwani, (2) Kaladungi *via* Naini Tal), and (3) Ramnagar (*via* Khyrna). From Haldwani to Bareilly Railway Station 60 miles, over a pucka cart-road ; from Kaladungi to Moradabad Railway Station, 48 miles, on partly pucka road ; and from Ramnagar to Moradabad, 45 miles, *via* Kashipur of which 25 miles more or less are a cutcha fair weather road, bridged. Bridge-of-boats on Ramganga north of Moradabad From Ramnagar up there is a cart-road (Kosi river not bridged) to Ranikhet,, 56 miles ; and to the Hawalbagh plantation, where the Kosi river is being bridged, 19 miles.

1, 2, 3—markets at the foot of the hills.

AYAR TOLI.

In Kattyur, consisting of about 1,627 acres. The area under tea was some years ago consit derable. About 700 acres are cleared, and *mos, of the remaining 927 acres consist of jungle.* of which part may be unculturable. There were on the estate a house, factory, godown, and numerous out-offices, all slated ; but all these are in bad repair. Height of house above sea-level, 5,200 feet, and the plantation ranges from that height to 4,400 feet. Upset price, Rs. 17,000.

Communications.—To Hawalbagh, 24 miles by bridle-road, thence as detailed under Hawalbagh.

These two estates will be put up to auction separately at the upest prices named and sold in fee-simple to the highest bidder, free of all demands for land reveuue, but subject to the rights already named in each case, and also to payment of customary cesses now in force, or that may be imposed hereafter.

Both estates have been surveyed, and maps may be seen at the District Office, Almora. Intending purchasers must satisfy themselves as to the present condition of the estates, and on all other matters involved in their sale. The purchasers must deposit 5 per cent. of the purchase-money at the time of sale, and the balance on or before the 1st of January, 1876, when possession will be given ; failing payment in full the deposit will be forfeited, and the estates re-sold.

N. B.—*No part of the Ayar Toli estate is held under a lease from the Nagnath Temple as stated in the former Notification* No. 1707 A., *dated 21st August*, 1875.

By order of the Hon'ble the Lieutenant-Governor, North-Western Provinces.

J. S. MACKINTOSH,
Offg. Secretary to Government.
North-Western Provinces.

No. 2084 A.

COPY forwarded to the Suprintendent of the with the request that the Notification may be twice pub ished in the before the 15th of November, in suppression of the Notification forwarded with this office endorsement, No. 1710A., dated 21st August, 1875.

C. LAZARUS & CO.,

No. 2, DALHOUSIE SQUARE,

CALCUTTA,

Agents for

J. DEFRIES & SONS,

BY APPOINTMENT TO

HER MAJESTY THE QUEEN,
H.R.H. THE PRINCE OF WALES,
H.I.M. THE SULTAN OF TURKEY,
&c., &c., &c.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

Candelabra,

On Plain and Jewelled Bases, elegantly Cut Crystal, Ruby, Emerald, &c., from 5 lights to 100 lights.

Comprising, amongst others, the superb Diamond Pattern Service, consisting of 185 pieces each richly cut, of the purest Crystal.

Table Lamps.

The newest and most elegant Designs. Specially intended for India, with Duplex or Single Burners.

Fancy Glassware.

Elegant Ornaments for the Drawing-Room or Boudoir.

Full Particulars in future Advertisements.

HIBBERT'S

HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London :

"April '23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very usefnl in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A. writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yonrs truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R, ROBERTS of the ship Sidney A. Jenkins."—Dundee, May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Botties, 2s. 6d. each ; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

INSIST ON HAVING HIBBERT'S SALINE.

AGENTS FOR CALCUTTA,

BATHGATE & CO.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

ROBERT ROBERTS,

Offg. Agent.

Calcutta, 15th Oct., 1875.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

DISTRICT DOG-CARTS.

(ON A NEW PRINCIPLE.)

MESSRS. NOWRAJEE & CO., COACH BUILDERS, &C., LUCKNOW, beg to intimate that they undertake to construct the above Carts, with all the latest improvements, for the trifling sum of Rupees

ONE HUNDRED ONLY

For Cash.

N. & Co. have supplied these Carts to all parts of India, *viz.*, the *N.-W. P.*, *Punjab*, *Central Provinces*, *Bengal*, *Oudh*, and recently *Burmah*. Most of the Planters in *Tirhoot* and *Lower Bengal* provided themselves with these Conveyances during the Famine operations, and found them very useful; while the Officers in the Customs and Survey Departments use no other now while out on duty.

Being light and movable, they are easily forwarded to any part of the Country at a trifling cost, and can easily be drawn by Ponies or Galloways.

Harness and Lamps to suit, at Rs. 30 and 20 extra.

N. B.—Orders from Out-stations must be accompanied with a remittance.

AGENTS IN CALCUTTA:

GILLANDERS, ARBUTHNOT & CO.

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well-borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescsibed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, Old Court House Street, Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of *50 per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2120.] Calcutta: Saturday, October 30, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

THE Viceroy is expected to reach Bombay on the afternoon of the 2nd prox. The Prince of Wales reached Cairo on Saturday last, and was received at the railway station by the Khedive. On Sunday he visited the Khedive, and gave a reception to the English residents, and afterwards dined at the palace; and on Monday His Royal Highness conferred the Order of the Star of India on the Hereditary Prince, in the presence of the Khedive. His Royal Highness started on the 26th for Suez, accompanied by the Khedive as far as the railway station.

***

THE rains have ceased over the greater part of India, but while prospects are fair in almost every other province, parts of Behar and Bhaugulpore again want those latter rains, upon which the main rice crop and the rubbee harvest so largely depend in those districts. The official reports of Saturday last suggest a hope that rain may yet fall in these tracts; but it ought surely to be known by this time, that if rain does come it will be abnormal: for the season is past and gone. Mysore also is an exception to the good fortune of the country generally; but prospects are somewhat better than they were two or three weeks ago.

***

THE report of the Deccan "ryots" and "riots" Commission is likely we understand to startle the public. What, however, should be done in the case is an extremely difficult question. One thing we believe will be found to be clear; that unless by alterations in the law or otherwise, we can prevent the ryot from being reduced to a condition of serfdom to the sowcar, we have done more harm than good to him by the great gift of proprietary right. It may possibly be the fact that the revised rates of assessment have proved to be too high, now that prices have fallen so heavily in the Deccan. They have fallen it is said in the last three years, 50 per cent, in the ordinary food staples. The corrected rates will it is hoped be completed in time for this year's *jummabundy*. The question is one of minor importance altogether however, to the grip which the moneyed class have obtained of the industry of the people. It will surprise many of our readers probably to learn that the assessments complained against, are but 3 to 4 annas over thousands of acres. It is not the assessment but the sowcar, that is the great difficulty.

***

THE first Quinquennial Report of the INDIAN LIFE ASSURANCE COMPANY, prepared by Mr. Hill Williams, who occupies the distinguished position of President Institute of Actuaries of Great Britain, discloses the following results. After carrying forward as a security against future contingencies 26½ per cent of the ascertained surplus, holders of with-profit polices who have paid five years premium up to December last, will be entitled to a reduction of 40 per cent. from the premiums payable during the five years ending December 1879, and policies of a more recent date to a proportionate reduction. This is certainly a very important reduction, and places the "Indian" on a level with offices of a more mature growth. As regards shareholders, Mr. Williams recommends an immediate bonus of 5 per cent. making the dividend enjoyed by that body equal to 8 per cent per annum for the last five years. The Table of mortality used in the valuation is based on the Bengal and Madras Military Funds, securing ample provision for claims as they may be expected to arise. Mr. Williams is a cautious actuary as is shown by his having selected the above named Table and by the carrying forward so large a percentage of the surplus. He says: "The universal experience of Assurance Companies proves that in the early years of their existence there is an apparent excess in the surplus, owing to the fact that in consequence of the careful selection of the lives, fewer claims arise than the Tables of Mortality lead us to expect, and due provision must consequently be made for a larger number of claims in the future." All expenses having been liquidated as incurred, the office has no item of "Preleminary expenses" in its books, although it is usual we believe to lump the first years expenses, or the major portion thereof, under some such heading, and to extinguish it gradually over a period of years.

***

ACCORDING to the *Pioneer*, Major Bannerman, the Political Agent at Rewah, is doing excellent work there. The Native States of India afford a heavy supply of labours, to task the skill and energy of our administrative Hercules. There is no lack of Augean stables to cleanse, and never will be we fear. It appears, however that the owner of the Rewah stable, had the sense and intelligence to acknowledge the need of Hercules. The Chief handed over to the British Government the management of the State during his own life, and the minority of his successor. It was the opinion of Sir Henry Durand, that in such cases, the grooms themselves should be made to purge the stables, Hercules directing operations, in order that after Hercules was removed, they might understand how to keep them sweet and clean in future. Accordingly, Major Bannerman has not had the advantage of British officials to carry out his measures, but has had to make the most of the native instruments that the State itself could furnish. He has established Civil and Criminal Courts instituted rules of procedure for the Civil Courts, and drawn up a simple Criminal Code. He has put the Revenue administration on a better footing, carried out reductions in the troops and establishments, and brought the expenditure well within the limits of the income. Much remains to be done, but a good work seems to have been well begun, and the Political Agent promises to deserve well of the country. Could we but hope that such good work would bear permanent fruit, we might look forward to the gradual reformation of all the Native States, but, in spite of the wisdom that dictates our anti-annexation Policy, it does seem a pity to spend our administrative strength and sagacity in reforming a State, and then to leave it again to the management or mismanagement of a native Ruler.

***

PHAETHON as driver of Apollo's chariot, was scarcely more incapable than seems to have been Captain Dawkins of the *Vanguard*, and the fate of the former was sufficiently tragic and terrible to be sadly bewept, with generous forgetfulness of his foolish temerity. But Captain Dawkins did not go down to destruction with the ship he commanded, and there were no pitiful tears shed by the judges who sat on the court martial. We remarked last week on the strange disclosure that neither he nor his officers understood the proper signals to make use of in a fog. "Knowledge comes, but wisdom lingers." We are far ahead of Dædalus in scientific ingenuity, and the gods may well look in astonishment at our tremendous engines of war, but we are as foolish as Icarus in neglecting prudence and common sense in the management of our wonderful engines and apparatus. Will such a stern lesson as the sinking of the *Vanguard* teach us wisdom? Or shall we send forth more monuments of our scientific genius to be sunk by com-

manders ignorant of fog-signals, and preserved in the strata forming under the ocean to instruct and astonish the geologists of some future age of the history of our planet? Of course Captain Dawkins and his officers are to be severely blamed, and they have been treated by the court with due severity. The naval career of Captain Dawkins is at an end. But while he deserves his punishment for ignorance and imprudence, amounting to incapability, the system under which a ship like the *Vanguard* was sent with the fleet to sea officered by men who did not know the fog-signals to make use of in an emergency, seems to deserve still sterner reproof. But of course no one is responsible, and no one but Captain Dawkins finds his professional career ended, though surely some one else is as much to blame as he.

***

THE *Home News* reads the country a similar lesson to that which we draw from the loss of the *Vanguard*, in connection with British railway progress. It seems that Darlington has been holding a jubilee in commemoration of the opening of the first English railway, the one from Darlington to Stockton. The progress, during the half-century, has indeed been marvellous. From fifteen miles an hour to the rate of the modern express train, marks progress enough in one direction. And now England is a perfect labyrinth of railways, and not only is every civilised State getting into a similar net of iron, but the steam-horse is snorting onwards, as the grand pioneer of civilisation, far into the dim dark wastes of barbarism, carrying Gospels Old and New to peoples that have long dwelt in darkness. It has learnt the art of climbing mountains and having long been accustomed to burrow under the earth, is now to do the same on a large scale under the sea. The great world is certainly spinning down the grooves of change with a vengeance. But even public rejoicings over results that but lately would have seemed incredible among the "fairy tales of science," cannot drown the deep murmur of discontent that rises again and again, as some fresh calamity on the railways, by collision or otherwise, fills the nation with a shudder. Two serious disasters occurred about the time of the jubilee in which several persons were killed and others severely hurt. Far Canada too, sent a derisive response to the jubilee cheers,—a tale of "ten persons killed and thirteen badly injured." It increases the general feeling of dissatisfaction, while it gives room to hope for some amelioration by and by, to know that many of these calamities are of the preventible class. The Canadian accident referred to is said to have been caused by the malignity of some human monster who placed an obstruction on the rails, but the late English accidents, appear as is so often the case, to have been the result of carelessness, and overwork. Long continued complaints, loud censure, and sometimes it is to be feared "curses not loud but deep," have failed to compel the Companies to make and enforce more prudent regulations, and employ hands sufficient to do the work without falling asleep or being stupid through exhaustion. Even a Queen's letter, the latest remarkable development of the English constitution, has had no appreciable effect. And, probably, there will be no important step taken towards a remedy, till the State take over the railways, if with the loss of the *Vanguard* confronting us, we are even justified in supposing that the State might minimise the evils complained of.

***

REGARDING the recent Admiralty rules that have been so severely commented upon, an explanation is now offered that they do not contemplate the surrender of fugitive slaves after these have found, by whatever means, refuge under the flag of a British man-of-war, but simply warn officers against the indiscriminate reception of such fugitives. It would be an ill return, it is argued, for the courtesy of slave holding States which are good enough to receive our ships into their waters, were we to let it be understood that we were ready to receive and welcome on board our vessels, as many of the slave population as could manage to escape and flee to them for refuge. The result would probably be that we should be interdicted from entering such seas. But should the slaves contrive to get aboard without being recognised as such by the officers, they are henceforth inviolable. The explanation seems certainly a little curious, and appears to degrade the famous British anti-slavery principle to something very like a superstition. It is a sort of magical virtue that inheres in British soil conferring freedom, will we, nill we, on the lucky slave who touches our country or our timbers. But it is to have no place in the hearts, and to exercise no influence on the volition, of British officers. We cannot cancel the effect of the charm on the fugitive who gets into contact with it by stealth, but we must not aid him, but rather with all our might obstruct him, in seeking to touch it. This explanation is the latest, but surely not the last.

THE *Bombay Gazette* publishes the latest news, which it has received from private sources, from Mr. Stanley in Central Africa. The communications are exceedingly characteristic of the "discoverer of Livingstone" but their tenor certainly is calculated to raise a doubt as to the beneficent character of his present expedition. In his first letter from the village of Kagehyi on the Victoria Nyanza, bearing date March 4th, he states that he had lost 181 men by desertion, disease, and war, but had 166 "brave fellows" left. Desertions had been few, and deaths many. Dysentery was the most fatal disease. Most of the countries he had travelled were new, the names of them never having been heard before. In one war with the Watium he lost 21 men in a single day, but adds, with triumph, "we killed 50 of the enemy and wounded scores more, burnt their villages, and slaughtered their cattle." His second letter, dated May 15th states that he had just "circumnavigated the Lake Victoria; was obliged to fight four times. Discovered rivers, gulfs, bays, islands about 300, and the extent, length, breadth, and depth of the Lake determined scientifically. * * * I have been nearly starved to death, once nearly drowned, and several times in danger from the savages." He concludes by stating that he was going "to rest awhile, then start the expedition for somewhere: have not determined where yet." If desertion, fighting, and dysentery, have continued active, one should be pretty certain as to where the expedition is by this time, and we can at least have no doubt where the savages would earnestly wish it to be, or would, if they were intelligent enough. From so brief a communication, so forcibly expressed, it is perhaps better to draw no conclusion at all, or we shall be obliged to suppose Mr. Stanley is carrying retaliation a good deal further than is necessary. Whether he is mincing the savages or not, he is at least not addicted to mincing his expressions.

***

OUR correspondent who advocated the use of common salt as an antidote to cholera, had no intention we believe of conveying the impression that he had made a discovery, but simply of making known to others the advantages he had himself observed in following the directions of an old suggestion picked up in his youth. His object has been obtained in the widely circulated notice which has been taken of the subject throughout India. The *Madras Mail* of the 25th October has an elaborate article on the use of salt for the prevention of cholera, insisting that in those districts all over India where salt is plentiful, cholera is much less frequent and less fatal than in those where it is scarce and more difficult to be obtained.

***

IT is a dark stain on the character of the Roman Catholic Church that she does not scruple, when occasion offers, to make use of the blind faith and carefully nourished fanaticism of the lower ranks of her adherents, to subvert civil order and resist the execution of the laws of the State. The late burial riot at Montreal is an example of this evil characteristic. In 1869 a man named Guibord died in that city. He was a Catholic and owned a lot in the Catholic cemetery, but had given unpardonable offence to the clergy, by being a member of a Liberal Association called L'Institut Canadian. They refused to allow the interment of his body in their cemetery. The case was tried in the Canadian Courts and afterwards appealed to the Judicial Committee of the Privy Council in England, the body being laid meanwhile in a vault in the Protestant Cemetery. The decision was in favour of the right of burial, and an order to that effect was sent to the Colonial Government. Accordingly, early last month, the friends of the deceased and among them the Superintendent of L'Institut Canadian, with a copy of the receipt that Guibord had received when he purchased the lot, attempted to remove the body to the Catholic cemetery. They found the cemetery filled and the gate surrounded, by hundreds of French Canadians, who met the procession with showers of stones and forcibly turned about the hearse and the other vehicles in the cortege. It was too far from the city to get military aid, and there was nothing for it but to take back the coffin to the Protestant Cemetery. The crowd is said to have been in a state of wild excitement. They were prepared to cast up entrenchments and defend themselves against the military. They threatened that if another attempt were made, they would smash the coffin and burn the body. A message was sent to England for the instructions of the Privy Council, a calmer proceeding than we should have expected, and one that deserves commendation, but as the excitement among the citizens was very strong, it was doubtful according to recent accounts, how long it would be possible to keep the peace. Were this a mere spontaneous outburst of ignorant superstition or sectarian animosity among the vulgar, it might be possible to look only at the ludicrous side of the affair. But it seems too true that the blessing of the Church is upon such rioters,

and they believe on priestly authority, that they are doing God service.

***

AT home a curious case of bigotry and obstinacy has lately occurred which may justly awaken contempt, but is too petty for indignation except in the case of the parties immediately concerned. The U. P. Presbytery of Dunfermline desired permission to erect in the Abbey Church a tablet to the memory of Thomas Gillespie, and the inscription stated that Gillespie was "deposed by the General Assembly for refusing to take part in the first settlement of a minister at Inverkeithing in 1752" Lord Henry Lennox has replied that the tablet cannot be erected unless it state that he "seceded from the established Church of Scotland." The Presbytery declines to engrave an untruth on the tablet, to soothe the wounded susceptibilities of Tory Churchmen, and with what show of truth could they say that a man who was authoritatively deposed, had seceded? The position of Her Majesty's First Commissioner of Works in this dispute is a blunder and an absurdity. Gillespie was turned adrift because he would not countenance, or assist in, an act of intrusion, such as the present Government lately passed a law to prevent for all time to come. The Patronage Act, might to some minds seem a justification of Gillespie by a Tory ministry and an Established Church, but Lord Henry Lennox has apparently some method of his own of reading history and of interpreting contemporaneous events, even when he himself bears a part in the latter.

***

THE Rev. George Gilfillan of Dundee, better known as a literary critic, than as a preacher of the Gospel, and more distinguished by grandiloquence and bumptiousness than by soft words and meekness of spirit, and who loves better to breast the waves of popular opinion than to float with the current, is generally worth listening to when he speaks on public topics, on account of the intellectual veracity which is seldom absent from his strongly expressed opinions, even when his prejudices are enlisted on the wrong side, as they sometimes are. He has recently delivered his soul on the late revival movement, and though we cannot believe that his unflinching opposition to that movement is either judicious or just, he has spoken truths that are too easily forgotten, and ought to be proclaimed, in the midst of seasons of religious excitement. In these movements, what is called the scepticism and doubt that trouble the minds of all really intelligent thinkers at some stage of their religious inquires, is usually declared without hesitation to be an unmixed evil, and "Devil born." No teaching can be more irrational than this, for assuredly there is no royal road from unbelief to belief, except through a wilderness of doubt which coasts the howling desert of infidelity. "Not to doubt at all in this age of scientific research, of progress, and of discovery, is simply stupidity." The "sweet reasonableness" of Christ is seldom represented among the evangelical preachers of the day. Their system is rather to induce a certain state of sensation, in which the intellectual faculties are buried under a wave of emotion, and when all doubt and fears have for a time been swept away by excitement of feeling, and the sensation, of the inquirer assimilates itself to that of his instructor, the passing ecstasy is, with the utmost assurance, declared to be faith, and the subject of it, for a longer or shorter period, "believes that he believes." But unless, as sometimes happens, this artificial faith becomes petrified into dogmatism, a season of doubt is sure to follow, and often causes intense suffering to the subject of it, from the fact that he ascribes the doubt to the devil. The position is a critical one, for the discovery that what was once a triumphant certainty was perhaps an hallucination, and is at least liable to grave question, is often succeeded by scepticism growing into rebellion against truth. But truth is steadfast and unassailable; it is but the man's own delusion that has vanished. The mistake is due in most cases to the spiritual guide, who instead of directing the eye outwards to the immutable truth, turned it inward to the fickle feelings. Strange are the depths of phantasy in the heart of man. In them may be mirrored with more or less distinctness the highest truths, but when blown upon by the winds of popular excitement, the ruffled surface reveals these truths, broken up into fragments, misplaced, and shaped into fatal untruths. It cannot but be extremely hazardous for a man to shout, "Eureka!" when he fancies he has found the highest spiritual truth amid the heat and excitement of a revival meeting.

***

WE must agree to a considerable extent with Gilfillan, and would fain have our popular preachers ponder the matter deeply. But one remark he makes, although it is not without a truth in it, is unhappily stated. It may be true, as he declares, that revivalism appeals to the lower order of intellects: but so does the Gospel, though not exclusively. And the friends of revivalism will deny that they appeal to the lower order of intellects only. The glory of Christianity is that while it affords ample exercise for the highest intelligence of man, and in some of its aspects transcends the highest reach of thought, it appeals to the lowest intellect as well as the highest, and can be sufficiently comprehended, for the greatest practical benefit, by the simplest as well as the subtlest. A religion which cannot address itself successfully to the "lower order of intellects," must fail to influence an unfortunately large section of the human race, and can hardly be a religion of humanity. It is one of the weaknesses of Broad Churchism that it cannot reach the masses and hardly attempts to do so.

***

A DIFFICULTY about a guarda-costa has arisen between England and Spain. The guarda-costa boarded a French vessel just out-side the Bay of Gibraltar, apparently under the impression that she was a smuggler, and although the Frenchman produced his papers which are said to have been correct, the guarda-costa persisted in trying to take him into Algeciras. Want of wind prevented the execution of this design, and next day the Spaniards went ashore for water and provisions, leaving a prize crew on board. They returned and again boarded the vessel. This took place in British waters, and a British steam launch captured both vessels and took them to Gibraltar. The Spaniards resisted, and cut the towline, and in the struggle a Spaniard, who was threatening a Frenchman with his cutlass, was shot dead. After an inquiry, the French vessel was given up to the Spaniards, the supposed reason being that the Spaniards declare, though the French deny, that she was first boarded outside British waters. The French Consul has of course, protested against the seizure, and there will doubtless be some troublesome negotiation between the British and Spanish Governments. This is the second seizure of a French vessel by a Spanish guarda-costa, and a correspondence about the first is still going on between France and Spain.

***

THE *Army and Navy Gazette* writing on the somewhat difficult position of chaplains on board ship, thinks that these gentlemen should leave their yards of broad cloth and other "church-millinery" on shore, and dress on board-ship like any other private gentleman. It appears that even on board a man-of-war the "trappings and suits" of the clergyman sometimes give trouble, and the chaplains show the same reverence for cloth as their bretheen on shore. The *Gazette* thinks every captain should follow the example of one, who on seeing a strangely attired individual pacing the deck sent a middy with an order to him to go below immediately, and to inform him that a second exhibition of the kind would be followed by arrest. The cassock and its owner quickly and quietly disappeared, and unfortunatly there was no bishop within hail. The captain is bishop on board a man-of-war.

***

THE petition of the Dacca Philanthropic Society, and Sir Richard Temple's reply thereto, have brought into prominence one of the most difficult problems in connection with education in India. While many, and these not solely Europeans but natives as well, complain that our Education system has actually lowered the moral tone of the educated native community, it seems at least certain that it has done nothing to improve its morality. The vexed question is, whether Government ought to directly attempt moral training along with purely intellectual training. Before attempting to answer the question, it appears to us that there is room for some preliminary investigation.. Has Government education really lowered the tone of morality among the educated class? It is stoutly asserted by many that it has, and by others as stoutly denied. Granting that it has:—is it the fault of the system that is pursued, or is it due to some other cause! There are two assumptions, neither of which has we think been proved—that morality has deteriorated, and that the Education system is to blame. We suspect the case really is, that the educated natives are as a class, not lower in morality than they would have been without education, but that they are more prominent in society; that their faults are therefore more curiously noted; that they manifest their character in different ways, and bear the obloquy that rests on innovators; and that as improvement in morality was not unnaturally looked for, the lack of improvement has been set down as deterioration. In trying to ascertain how far, if at all, the system is to blame, the superior morality of those educated at religious colleges, needs to be more clearly demonstrated, Excluding the few converted

to Christianity, who, we trust may be assumed to excel their neighbours in morality, can it be be shown, as it is often asserted, that the others are as a rule morally better than the alumni of Government Colleges? Extensive employers of educated natives might be able from their experience to throw some light on this point. We have heard conflicting opinions expressed upon it, and have not been able to arrive at a satisfactory conclusion. The duty of Government to teach morality, is one which we hope to discuss fully at a future time.

THE INDIAN CONTRACT ACT.

THE last number of the *Calcutta Review* contains a thoughtful and pains-taking article on the not wholly unattractive subject of Contract. The very modest title prefixed to the article scarcely conveys a fair idea of the ground it covers, and may possibly have the effect of suggesting to the tourist, or the student in vacation time, merely law and the lawyers. But while necessarily much of the article is intended for and is interesting only to the lawyer, there is still much to entertain one who would run and read. As a title, "The Philosophy of Contract" would in our opinion have been more appropriate and true. The writer begins with telling us, that if we have been beguiled by the charming periods of Sir Henry Maine into the belief that "neither Ancient Law nor any other source of "evidence, discloses to us society entirely destitute of the "conception of contract," the creed we have subscribed to is false, though tempting; that it is a mistake to suppose that "every bolt and wheel of the modern social machine had its "counter part in more rudimentary Societies;" and that if we go back to the earliest accounts of the world, as in Scripture, and come face to face with "the grand old gardener and his wife," we come to a time when there could be "no consent nor contract." And he adds "This utter absence of the con-"tractual relation must have existed, with small modifications, "during a long period of time."

We venture to consider this a clever bit of hypercriticism. For when Sir Henry Maine spoke of "Society" he could scarcely have had in his mind's eye that very primeval and poetic period in the world's history when "Adam delved and Eve span." Of necessity, the two could not constitute "society." That "two are company" a trite and homely proverb reminds us often enough in private life, but the term "society" would we think be more applicable to that epoch in the annals of the world, when "it came to pass that men began to "multiply on the face of the earth, and daughters were born "unto them.....and they took them wives of all which "they chose."* That at this period, society was not destitute of the conception of contract, is admitted by the writer: for he says that "marriage by consent—not the consent of the "parties themselves, but that of their respective fathers on "their behalf—was probably the earliest class of agreement." There is no evidence in the first twelve chapters of the Book of Genesis, certainly none that would satisfy the lawyer, to show whether in the marriages of the time there were the two essential ingredients of every contract *viz* proposal and consent. Indeed the words "they took them wives of all "which they chose" rather suggest a mild form of *zuberdustee*. But assuming that the consent given in those days was that phase of assent which the law attributes to the wives of oriental races, we take it that a contract true and simple was entered into, and that this is the earliest form of contract known to what Sir. H. Maine terms very properly "society." The spontaneous contract of partition soon after, between Abraham and Lot (for Settlement Officers had not then come into existence) would afford an instance of Contract in a later stage and of a different kind.

In pages 241—252 of the Review, we have an instructive and we think accurate *resumé* of the history of Contract; its origin in the agreement of marriage; its progress in common barter; and its further developement in the use of sundry defined materials as the media of exchange, until we arrive at that comparatively complex and somewhat civilized state of society that is synchronous with the Roman Law of Twelve Tables But we prefer quoting on this subject from the article itself:

"We have mentioned the subject marriage as supplying the first step "in the history of Contract. The wife was generally purchased by the "father of the family for so many head of cattle, and we are informed "by recent residents at the Cape, that the practice is to be seen constantly "amongst the Kafirs of a fine woman exchanging for from three to six "oxen. One noticeable point is that this was simply a form of barter "or exchange. During a long period of time, the only form of contract "was exchange. This form of agreement was not merely the result of "the absence of a medium of circulation, but must similarly have ex-"isted had savage races in early times had money ready to hand. The "mind of an infant in a civilised community may serve as an index—we "do not say a perfect index, but still an index—to the mind of a grown "savage. Now what is the very first form of agreement of which the "infant takes hold, and beyond which it does not ordinarily pass for some "years? It is that of exchange. Allow that you object to the crying "of a child, and to an infant's unhappiness, how then do you proceed for "instance to take from a child a dangerous instrument of which it may "have prossessed itself? If you do not snatch it ruthlessly from the "child, do you not bargain for its release by an exchange? You give the "child some toy or bauble near at hand, and you take the dangerous "instrument away in quietness."

"This is very much the state of uncivilized man. You give him some "thing on the spot which he wants, for something which he does not "want or wants less, and he is satisfied to enter into an exchange and "effect a barter. . . . . But offer the savage money as "money *i.e.* as representing the power of purchasing the article he "wants, and he will not close with the offer or effect the exchange. And "why? The reason seems to be that where money is introduced, two "contracts are substituted for one contract. Instead of A being given for "B. A., is given for money. B. is given for the same money. The party "to whom money is given to get what he wants has to go through two "transactions and in going through the first, has to exercise a faculty "of faith or expectation in his ability to procure with the money he "receives for A,the article B, which he wants more than he wanted "A. And this faculty it is which the child, and we think the grown savage "has not."

After supporting these views by passages from the works of von Humboldt, Sir Emerson Tennent, Sir John Lubbock and Dr. Hunter, the writer follows Ortolan and Sir Henry Maine in their history of the development of contract amongst the Romans, but as this portion of the article interests the lawyer more than the general reader, we pass on to the comments on the Indian Contract Act. The *first objection taken* to the Act, is that it is weighted with unnecessary and almost wearisome illustrations; that it does in fact "hold each farthing rushlight to the sun." And in support of this contention, a Westminster Reviewer is quoted "who speaks of the illus-"trations used in the Indian Acts, as legal curiosities which "seem to betray in the celebrated draftsmen who framed "the Code, or in the legislature which adopted it, a "singular diffidence in the clearness of its language, "or distrust of the capacity of those who are to expound "it." It is unquestionably an axiom of legislation that "whatever is unnecessary is bad," but the whole question turns on the necessity of these illustrations. We think that they are most necessary, and that the Indian Law Commissioners have shown in their legislation for India that they throughly understood the *calibre* and wants of the bench. They have dealt with India, not as it ought to be but as it is. They have accepted as a sad but too patent truth, that the major portion of our judges are not trained for their work; that they are at the best sciolists at it; and that they need help even in the very rudiments of law. Hence, the apparent absurdity of defining a contingent contract. "A, contracts to pay B, Rs. 10,000 if B's house is burnt. This is a contingent contract." India is perhaps the only country in the world where such an illustration would be necessary but the reason is simple. It is the only country in the world where the bench is not recruited from the bar, where men are commonly pitchforked into positions for which they have never been trained. Their training, *quantum valeat*, goes on while the administration of justice is being attempted, and part of the training consists in that casual acquaintance with the Contract Act which is obtained from a perusal of the illustrations. We do not here refer to the large class of excellent judges who having elected, when subalterns, for judicial employ have made the study of their new profession the business of their lives; but to judges taken late in life from every conceivable department and sub-department of the Service, from the Accounts Department, the Telegraph, the Customs, the Police, the saddle of the Hussar, and the shop

* Genesis Chap. VI. 1. 2.

of the Apothecary. And it is our firm but sad conviction that the illustrations to the several codes of Indian substantive law were not only necessary, but that the want of them would have most seriously interfered with the adminstration of justice, and have caused much harm and much ruin.

The concluding pages of this excellent article, are taken up with a discussion of those salient features of the English Law of Contracts which have been so marvellously embodied in the Indian Contract Act. No one can glance through the Act without finding reason for admiring the research, the fine sense of discrimination, and the great power of classification shown in almost every Chapter of it. But there are unquestionably some errors in it as in every thing human, and we think that the writer of the article under review has put his finger on some of them. We give his own words :

"According to the definition of contract given in the Act, how can the "Legislature speak in strictness of logic of a 'void contract,' which is the "name given by the Legislature to that which having been a contract "ceases to be enforceable? Valid contracts and invalid contracts! "Shades of Jeremy Bentham and John Austin. Such a classification "seems absurd enough even in the pages of a Brehon text writer where "it has been shown to have a meaning and to be capable of explanation! "But in so important an Act as that under discussion, passed by thinking "men of the nineteenth century, the same classification seems to be a "serious blot. It must be clear—looking at the definition given in the "Act itself—that as soon as a contract ceases to be enforceable it ceases to "be a contract, and that a contract not enforceable at law, is a flat con-"tradiction in terms. Then again a reference to the Act shows that the "words 'enforceable by law' have an unnatural meaning assigned to "them. Chapter IV, has to do with the performance of contracts, and "treats first of contracts which must be performed, and secondly of con-"tracts which need not be performed, that is, which will not be carried "out by a court of law against the defendant. If then the agreement is "altogether incapable of enforcement, how can it be said that it is an "agreement enforceable by law, *i.e.*, 'a contract.' To speak of a contract "which need not be performed, when you have already said you mean "by a contract 'an agreement' enforceable by law, is to speak of an agree-"ment enforceable by law which need not be performed *i.e.*, which is not "enforceable by law, is to talk nonsense. . . . We think that if that "which once having been a contract ceases to be enforceable by law were "called a '*voided contract*' and a similar alteration were made in the "phrase contracts which need not be performed, the logical defects "pointed out would be remedied."

With all its defects there can be no question that the Contract Act is "a wonder of the draftman's art" a marvel of the "power of expression" and a grand and noble piece of legislation, and this must be our apology, if apology be needed for our somewhat lengthy review of an article on what is perhaps a technical subject.

THE EARLY LIFE OF PRINCE BISMARCK.*

THE life just published of Prince Bismarck, bears on every page indications of having been written by one having authority to do so. His publisher's name would lead one to expect as much. But the many quotations from private letters, several even from letters to his wife, as well too as the thorough-going justification of various sacrifices of personal conviction to the needs of the state, which he felt himself called upon to make during his diplomatic and ministerial career, afford conclusive assurance that it is written by no unauthorised hand. Otto Edward Leopold von Bismarck was born on the 1st of April, 1815, at Schonhausen, in the mansion of his father Carl von Bismarck. His mother was the daughter of Privy Counsellor Anastasius Menken. His father had served in the army as captain in a cavalry regiment, and though a genial, kind-hearted man, retained to the end of his days the strict methodical habits of the soldier. His mother was fond of society. She was admired much for her wit and beauty. It was said of her that she was the intellect of the Bismarck home, while her husband was its heart. There were six children in all; but three only survived the early years of childhood. These three were Otto, a brother Bernhard five years older, and a sister Malwine twelve years younger. In his sixth year Otto was sent to a school at Berlin. The discipline of the school was very severe, too severe for Otto, who impressed every one when young by the tenderness of his nature. He suffered much from home-sickness. As he grew older he was passed on to other schools in succession. The director of one of them speaks as follows of his impressions of Otto, when he first appeared in his school. "He sat amongst his comrades, looking bright and cheerful, with a pleasant boyish face and clear gleaming eye, so that I thought to myself 'That's a nice little fellow, and I will keep my eye on him.'" He goes on to say that Otto a few years afterwards, in 1831, came to him as a boarder, and made himself quite at home in his simple household, being always agreeable, amiable, and unassuming. "In the evening he hardly ever went out, and if I happened not to be at home then, he would remain chatting with my wife in the pleasantest manner, and showed a strong liking for domestic life." When at school his quick apprehension and good memory helped him to speedily acquire the languages he set himself to learn. He displayed also a keen interest in the history of his own country. In 1832 he entered the University of Gottingen. He took with him into university life neither the quiet indoor domesticity nor the perseverance in study of his school days. He entered heartily into all the liveliness and fun of the non-working student's life. He was admitted into the Hanoverian club, for which a necessary condition of membership was the possession of frolicsome tastes. He was rarely seen at lectures. At the close of the following year he passed on to the University of Berlin. He began by making an attempt to attend lectures there, but after the first day gave up the attempt altogether. In spite of his neglect of lectures he passed, in the spring of 1835, an examination in jurisprudence, and so became an advocate. He was in the following year appointed 'Referendarius' in the administrative department at Aix-la-Chapelle. The pleasure of travel with friends of his own age often beguiled him from his work. He wandered through France, Belgium and the borders of the Rhine. He refers to this period of his life in a letter addressed to his wife in July 1851 :—

"The day before yesterday I went to Wiesbaden, and looked with a mixture of sadness and premature wisdom at the scenes of my former follies. If only it would please God to fill up with clear strong wine the vessel in which at twenty-one the muddy champagne of youth frothed up to so little purpose! How many of those with whom I flirted and drank and gambled are now underground! What changes my views of life have undergone in the fourteen years that have elapsed since that time, each in its turn seeming to me the correct one; how much that I then thought great now appears small; how much now seems honorable which I then despised! How much fresh foliage may still grow out of our inner man, giving shades, rustling in the wind, becoming worthless and faded before another fourteen years are passed, before 1865, if only we live so long! I cannot imagine how a man who thinks at all about himself, and yet refuses to hear anything about God, can endure life without weariness, and self-abhorrence. I cannot think how I endured it formerly; if I had to live now as then, without God, without you, without children, I don't know why I should not throw off this life like a dirty shirt."

In 1837, the advocate who was fonder of a wandering life than of professional duties, removed from Aix-la-Chapelle to Potsdam. There he served his year in the army. In 1839 he and his brother entered upon the management of the family estates in Pomerania, which their father had relinquished to them. For two years they managed the estates together. Then Bernhard married and gave up two of the properties to Otto. At one of them, Kniephof, his father was living with him in the year 1844. In a letter to his sister he gives a picture of the life they led :—

"I live here reading, smoking, and walking with my father, I help him to eat eels, and sometimes take part with him in a comedy which he is pleased to call a fox hunt, when we go out with Ihles, Bellin, and Carl, and with due sportsmanlike precaution, without a sound, and with the most careful observation of the wind, we surround a fir wood, all of us, perhaps including my father, being meanwhile morally convinced that there is no living creature in it, except possibly a few poor women picking up sticks. Then Ihles, Carl, and two of the dogs go through the wood giving vent to the strongest and most awful sounds, and father stands motionless and alert with his loaded gun, exactly as if he were already expecting an animal, till Ihles shouts out close to him in extraordinary guttural tones—hu la la, he be, foss, häh, häh! Then father asks me quite innocently if I have not seen anything, and I reply with as much natural surprise as I can muster : 'No, nothing at all!' Then we go off to another wood, whose supposed abundance of game is always boasted of by Ihles with the most natural show of confidence. This goes on for three or four hours. . . . Besides this, we go and inspect the orangery twice every day, the sheep-farm once, the four thermometers in the room every hour; and since the weather has become clear we have regulated the clocks so perfectly by the sun, that the one in the library alone gives a single strike after the others have all finished striking *a tempo*. In your letters to our father you should tell him more

* Prince Bismarck. By Wilhelm Görlach. Leipzig; Bernhard Tauchnitz; London. Sampson Low and Co.

of the little events in your life, because they give him immense pleasure ; tell him, for instance, who has been to see you, and whom you have been to see, what you have had for dinner, how the horses are, how the servants behave, whether the doors creak and the windows shut properly."

This authorised biography contains occasionally a phrase of the utmost candour. Thus we read :

" Bismarck worked away as a country gentleman in the most energetic and determined style. An indomitable and daring rider, an enthusiastic sportsman, and an invincible drinker, he brought into the monotony of solitary country life, the movement and excitement to which he had accustomed himself."

But he was not satisfied with this life. He began to weary of a life, the only usual way of varying which was by complaining about night frosts, sick cattle, bad rape, bad roads, dead lambs, hungry sheep, want of straw, food, money, potatoes, and manure. He set himself to beguile the tedium of the agricultural life in other ways than in riding, hunting and drinking. He began again to read history, and to study theology and philology. The writings of the pantheist Spinoza had an especial attraction for him. Politics, too, engaged his attention. He liked to talk on public matters with the neighbouring proprietors, they called him " mad Bismarck," but any one with an eager style of discussing topics in which he takes an interest is liable to be so spoken of, so that the term applied was no sign of disrespect. After a while his dissatisfaction with country life induced him to return to Potsdam, and take up again legal pursuits in the service of the State. Though he worked in law matters as a subordinate, he never forgot his own rank and importance. Once his chief, on whom he was calling, seemed to be forgetful of his presence, so absorbed was he in work. Bismarck turned his back upon him and manifested his impatience by tatooing on the window.

In July, 1847, Bismarck married a lady of Pomerania, Johanna von Putkammer. He had previously made his first appearance at the General Assembly at Berlin as Deputy for the Provincial Assembly of Pomerania. His career from that time has been a public one. After four years of parliamentary life he entered the diplomatic service, and was for eight years the representative of Prussia at the Frankfort Federal Diet. In 1859 he went to St. Petersburg as Prussian Ambassador. In 1862 he returned to Berlin and was appointed President of the Ministry and Minister of Foreign Affairs. In 1865 he was raised to the rank of Count. In the following year he become Federal Chancellor. How in 1871 after the old king had received from the princes of Germany the imperail crown, Bismarck became Chancellor of the Empire, and was raised to the higher rank of Prince, is but the history of yesterday.

The book closes with a sketch of the struggle between the German State and the Roman Church, the struggle of which the end is not yet, and whose progress all Europe is watching with intense interest.

A HUMANITARIAN AT THE HOME OF JESUS.

MR. STUART GLENNIE, though his denial of the reality of a spiritual state of existence beyond the life in the visible world, renders the term materialist an appropriate one by which to designate him, himself disclaims such a desiguation and prefers the title of idealist. And it is but fair to yield to him the term which pleases him best. The great object of his discussions with Mr. Buckle which fill up so large a part of his " Pilgrim Memories " —those discussions which severe critics have insisted must have wearied to death the worn-out student travelling to recruit his health—was to shake his friend's conviction in the all potency of material causes, rather than of moral ones, in determining the course of the world's civilisation. As one, then, who believed in the influence of ideas upon human progress, his Pilgrimage to the Holy Land was undertaken so that he might look upon the very scenes amid which the Christian ideas had their birth, and where what he looks upon as simply myth and legend, sprang into being in the minds of the early followers of the Nazarene. He confesses that the chief object of his journey was to gain "enlargement of sympathy and greater truthfulness of view," which things constitute " true spiritual advancement." It was when at Nazareth itself, the home of Jesus, that he was inspired while listening to the music in the Church of the Annunciation, with a strange hope, to which he gives strange expression, "that the love of Christ, preached, at length, in terms accordant with that conception of universal Law, which it was not given to Jesus to know, will break down the separating barriers of superstition and bind mankind together as one." At present Mr. Stuart Glennie is the only one to whom it is given to know the conception of universal Law which is destined to bring about what he calls "the Modern Revolution" in the religious ideas of the whole world. The sentence in which the great Law, he has been led to discover, is hidden, runs thus. " The Ultimate Law of History is a certain change and process of change in men's notions of the causes of change," and in this sentence the law will remain more or less vested, until there have appeared three more volumes devoted to its gradual unfolding and verification. "Pilgrim-Memories" has been preceded by a volume " In the Morning Land," which is mainly an introductory historical analysis, in which attention is called to " the antagonism to the Christian theory of history of the new theory summarised in the ultimate Law ; to the refutation of the Christian theory by the explanation which the Law gives of the origin of Christianity ; and to the New Ideal which arises from the establishment of the Law." Mr. Stuart Glennie does not expect at present that the mystic meanings underlying the brief statement of his ultimate law will do more than dawn hazily upon the mind of a reader who has followed him so far through his eloquently written volumes. He hopes ere long, however, to carry with him the sympathies of those who will stedfastly read his coming volumes, and to create for himself a fanatical following who will aid him in carrying out his great idea to a practical and successful issue. He plainly avows the need of fanaticism for furthering the success of the momentous Revolution he is initiating. Fanaticism with regard to an idea is, he considers, what velocity is with respect to a moving mass. "Fanaticism," he says, "is the velocity-element in political momentum And in politics, as in mechanics, things can be accomplished when the velocity is high, which, however large the mass, are impossible when the velocity is infinitesimal." The things to be accomplished, he hints, are the transformation of the social institutions identified with Christian orthodoxy, and the surrender of the influence of Christianity upon education. It would however be " the silliest of dreams" to suppose that these results could be brought about without enthusiastic ardour kindled into fanaticism by the opposition it would meet with from the immense wealth, the elaborate organisation, and the intense passion of the adherents of the Christian faith. Surely the demeanour of the Modern Prophet of Humanitarianism, in whose mind has been born the idea destined to bring the world into the throes of Revolution,—surely his demeanour in " the Birth-Land of Christianity," and in the very home of the founder of the Religion whose tragic fate it will be to be swept away in the storm of remorseless fanatic hatred to be aroused in the future brotherhood of Humanitarians, will be worth noting. The foreshadowing of the whirlwind of destruction which will eventually usher in the nobler system, the germ of which is at present fructifying in Mr. Stuart Glennie's brain, moved his travelling companion to asperity ; but when Nazareth was reached, poor Mr. Buckle was too overborne with fatigue to visit the scenes sacred in the eyes of Christians ; the Prophet of the Modern Revolution was therefore left to his reflections undisturbed.

It was but natural that he should first of all take note of the differing traditions of the Greek and Latin Church as to the scene of the Annunciation. The travellers' tents were pitched on the green slope beneath the trees which grow by the side of the " Fountain of the Virgin." This according to the elder tradition of the Greeks, was the fountain at which Mary, while drawing water, received the salutation of the Angel Gabriel. What the pilgrim of humanitarianism saw there, draws from him the remark " that the beauty of the Virgins of the Fountain, the supple grace of their figures, and the Syrian langour and passion of their eyes, make such a local legend still appropriate. These daughters of men are still worthy the salutation of the sons of God." The Latin tradition which makes the scene of the Annunciation at the grotto over which the Franciscan Church is reared, he looks upon as a less poetical one than the other. He records that he noted the inscription on the marble pavement, *Verbum caro factum est* —The Word was made Flesh, but that the Divine music sounding through the Church took out of his heart contempt of the Egyptian superstitions there enshrined : one of his favourite notions being that belief in Christ as the Son of God is but the reproduction of an Egyptian notion as to Osiris.

If we follow our wandering Idealist from the service of entrancing music to the top of the hill overlooking Nazareth, we find that the upland solitude seemed to him to be the real home of Jesus—his prayer-home—the scene of the most intense realisation of relationship with the Father ; but at the same time we are told that we must understand by " Father, the ensphering Infinite, and by communings with the Father the solitary meditations and entranced broodings that ever precede an historic mission ; that we must also put aside as superstitious every thought

of Jesus being a supernatural visitant of our earth, if we would be filled with the deeper and more edifying feeling that the ideas which sprang up from the mind of Christ as the result of his lonely meditations, came welling up from the depth of our common Humanity, though their ultimate sources are indeed in the "Sphering God." Remembering that we have three more volumes yet to come, we overlook the present vagueness of our pilgrims cogitations, which are of course destined to assume a marvellously definite form.

During his stay in Nazareth, Mr. Stuart Glennie gave himself up to the contemplation of the thought, that the one great significant fact connected with Jesus was his conception of God as a Father and his preaching of Love. The problem he devoted himself to as the most appropriate for his daily walks amid the scenes of the early life of Jesus, was—what was the origin of this vast new moral phenomenon—the new conception of God by Jesus, and the love for Jesus himself as the Anointed of God? What was the cause of this new development of Love which found its Western expression in Christ and Christianity! The atmosphere of Nazareth gave a new enthusiasm, and its associations a consecrating aim, to the search for the solution of this problem of the new humanitarian philosophy. He felt himself brought not only into little less than personal contact with a great individuality, but with the very spirit of a great new development of Humanity. It seemed to him the longer he pondered upon the problem, that its solution must be founded on, and derived from, that of the general problem of "the relation of the Internal and the External—the general question of Idealism or Materialism," which was at issue between Mr. Buckle and himself in all their discussions. For if Christianity was to be regarded as a vast new moral phenomenon, and its origin explained from a general Law of History, the question at once arose as to the nature and origin of moral phenomena—of phenomena, that is, of passion, aspiration, and desire, or, in a word, of *Want*. Are we to join with the materialists in conceiving of these phenomena as being externally determined by material causes, or are we, with the Idealists, to think of them as instances of an undetermined internal spontaniety? If however it be found that each conception—the Idealist on the one hand, and the Materialist, on the other—give but a partial view of the truth, it must be clear that the solution sought for must be founded on the reconciliation of Idealism and Materialism. The potency of material causes alone he all along found himself unable to assent to. Both himself and Mr. Buckle, discussion with whom had led up to the train of thought which occupied him at Nazareth, believed that science had irretrievably undermined all but the purely ethical beliefs of Christianity, and, indeed of every supernatural religion whatever. Both were unable to accept the idea of supernatural relation. Mr. Buckle on the one hand believed that morality was but conventional custom, and religion but politically useful superstition. Mr. Stuart Glennie, on the other hand, maintained that both religion and morality were founded not on a miraculous revelation of the will of God, but on a scientific revelation of the nature of man. He maintained further that the Historical Method, founded on the Ultimate Law, to the verification and elucidation of which his volumes are devoted, was the *Novum Organum* of such scientific revelation. Applying the new instrument of enquiry, he ventured to generalise the results he arrived at, as follows. Human history is "an advance from the conception of Spirits, or Gods, as the causes of things, to the conception of the Mutual Determination of things themselves; from the conception of Supernaturalism, or Miracle, to that of Naturalism, or Law, from the conception of one-sided Determination to the conception of Mutual Determination. But how has this advance been effected, and what is the relation thereto of Christianity? Consider what is most essential in Christianity as a great historical phenomenon. Is it not its moral character as expressive of a new development of Love? But Love may certainly be defined as the aspiration to, and feeling of oneness in, the sense of Mutuality. Thence it is at once brought into relation with Law. For if Law is the conception of Mutuality, Love is thus the instinct of it. For then Christianity is, in its most essential aspect, to be characterised as a new development of Love, of the aspiration to, and feeling of, oneness and Mutuality. Is not its place and meaning clear in the great historical development of Humanity; is it not the *moral foreboding* of that intellectual conception of Law, or Mutual Determination, the clear discovery of which in its universality, is the distinction of our modern historical period?" Such a fact, he further urges, as the precedence of the intellectual conception of Mutuality, and of the full recognition of Law, by an intense moral aspiration, to Mutuality, or new development of Love, has nothing in it contrary to ordinary experience; such a fact in the history of the intellectual conceptions of Humanity would be analogous to that which may be remarked in the history of the intellectual conceptions of every individual discoverer. Great discoveries are always discoveries of oneness. And the great discoverer is ever found to have had the persuasion of that oneness, to which he ultimately gives articulate expression, long before such expression becomes possible to him. The persuasion of Columbus that there existed a Western Indies is adduced as a typical instance, and reference is also made to Faraday's "long and constant" persuasion that all the forces of Nature are mutually dependent, having one common origin, or rather, being different manifestations of one fundamental power."

And we may add that Mr. Stuart Glennie evidently has firm hold of the persuasion that the ultimate law of history which, although he has given to it a definition, presents itself as yet to his mental vision with but a dim and shadowy outline, will ere long be discerned by himself first, and by others by means of his present and future volumes, in clear-cut contour. What to him is now but a 'persuasion,' for holding which he is willing to be "jeered at by the herd of self-styled 'sensible' people," he is plainly fully assured will meet with a widespread recognition as the great Law of Human Development, that it will meet even with a recognition which will be accompanied by a glowing enthusiasm—an enthusiasm which will become in the undisciplined minds of an eager crowd of partisans the fanaticism along the current of which his great truth will be uplifted and borne to universal triumph.

Yet the volume—though at times provoking unsparing criticism by its quiet assumption that the whole life of Christendom has been but a prolonged delusion, and life and immortality in Christ but an idea with which the human mind has for centuries been dazzled—has a value of its own. It is an assertion from the sceptical side of the Divine possibilities existing in human nature. Its whole argument involves a recognition of the truth "that through the ages one increasing purpose runs," that 'the human mind has been gradually gaining a surer grasp of ideas which prompt the nobler action, that the longing for higher culture has been deepening and strengthening itself, and that as far as the only life to which heed can be given by an advanced humanitarian is concerned, men are living with their loins more resolutely girt, and with their lamps more brightly burning—living with more earnestness of aim, and with a keener desire to partake of the heritage of thought bequeathed to them by generations past. But the finer spirits of Christendom are now asserting just as emphatically the like policy in the progressive life of Humanity. It is true, that there are some who have done much towards severing Christian life from the higher culture of the age, by encouraging a short sighted devoteeism which can only think of the Divine one as concerned with men and women when they are in the formal attitude of devotion, and which discourages enthusiasm for knowledge as a wordly snare. But such narrow views are giving place to the boldly proclaimed conviction that Humanity in all its higher aims is Divinely aided; that in every human excellence we may read a verification of the old assertion that God created man in His own image; that indeed the higher life of Humanity—its strivings after wisdom, its self-sacrificing love—is a continuous revelation to the world of the Divine, whose union with the Human in Christ is the foreshadowing of the final union of the Divine with Humanity, redeemed and sanctified. To all, therefore, who like the author of "Pilgrim Memories," while telling us that thoughts of immortality are but an idle dream, bid us enter into an enthusiastic recognition of the Divine nature of the ever advancing aims of Humanity, we answer that they have but an imperfect grasp of what is after all the outgrowth of Christian teaching, and that in the Christian system as it is expounded by the most Catholic-hearted divines of the day, they would find the fullest recognition of all that they so zealously contend for as to the essential divineness of the drama of human history and civilisation.

TENNYSON'S "QUEEN MARY."

II.

THE distinctive character of the tragic drama is that it represents the human will struggling against Fate, and—however heroic the struggle, however great and admirable the qualities displayed and the actions performed—finally borne down and crushed by the irresistible events that the unseen destiny brings forth. The leading person in the drama may be either virtuous or the reverse but certain conditions are necessary to the successful representation of either sort of character. If virtuous, the character must have some fatal inherent defect, to justify the doom of failure, unhappi-

ness, and ruin. If morally bad, it must still possess some great quality, some noble trait, sufficient to awaken and sustain interest and a certain amount of admiration. The character of Queen Mary is a difficult one to be made the centre of interest in a drama. She engaged in a most powerful and determined struggle against destiny, and her defeat and ruin were sad and terrible. So far she is a fitting subject for the dramatic genius, but our utter disapproval both of her general course of action and of every individual act of her reign, and every feature in her character—at least as exhibited in the drama before us—is inconsistent with the exercise of that measure of sympathy and admiration which the central person of the drama ought always to arouse. As it does not appear that any one about her really loved her, unless, perhaps the characterless uninteresting, Cardinal Pole—so we read through the drama without being able to feel for her either love, sympathy, esteem or even admiration. In the last act—by far the best part of the drama—our pity indeed is awakened for the Queen, but it is perhaps solely because she is a woman, for in no other respect does she even seem to deserve our pity. Since the poet was fated to choose Mary as his tragic-heroine, it was probably impossible for him to have portrayed her differently, without violating historical accuracy, and Mary is too well known to every reader for this to have been allowable. The truth seems to be that no one but a sincere Catholic who reads history with Catholic partialities, could make Mary the heroine of a successful drama. Such an one gifted with dramatic genius might, with Mary for his subject, write a magnificent drama though it would probably be a misleading history. Tennyson has adhered faithfully to historical truth, and has come short of full dramatic success.

Mary possssed the resolute will, and the high courage of the Tudors, but her strong intellect had been warped by her training and by the bitter prejudices which had been early instilled into her mind and nurtured by the treatment to which she had all her life been subjected. When she was suddenly raised to power, the passions and ambitions that had been smouldering for years, broke forth into a cruel blaze, and being sanctified in her mind by the holy names of love, duty and religion, she did not, as her great successor would have done, rule them with sagacity and curb them from considerations of policy. Her two master passions, her infatuated fondness for Philip, and her revengeful hatred of the new religion, the poet has represented in all their strength. In the drama these are not merely her ruling passions, she is little more than an embodiment of these. It was perhaps impossible to have filled up the character to harmonious completeness without the introduction of imaginary incidents of a less historical nature than Tennyson has made use of. But a good deal more might have been made of the nobler Tudor qualities which she undoubtedly possessed, in the scene, for instance, in Guildhall, when she rouses the London citizens to oppose the rebellion of Sir Thomas Wyatt. Something might here have been done to awaken our admiration for the Queen, but the speech has no such effect. It is a good speech but not in any sense a great one. It lacks vigor and sends no thrill through the heart. Only once in the course of the drama does Mary excite our admiration and that is but for a moment. When the issue of the contest with Wyatt is dubious, and she is advised to fly, and the ladies of the palace are screaming that there are arrows flying without, she goes out upon the gallery exclaiming "I am Harry's daughter, Tudor, and not fear." And when Courtenay comes with the tidings that the rebels had broken the royal ranks and he, to save his royal cousin, had left Pembroke in the thick of the fight, she answers :

> "Left him and fled; and thou that wouldst be king,
> And hast nor heart nor honour. I myself
> Will down into the battle and there bide
> The upshot of my quarrel, or die with those
> That are no cowards and no Courtenays."

A few more passages like this would have greatly heightened our interest in Mary, but the dark side of her character, her tiger-fury, meets us a moment after. News of victory is brought, and Mary knows no pity. "To the tower" is her brief sentence, not only on the leaders of rebellion, but even on her sister who is suspected of treason.

> "To the tower with *her*!
> "My foes are at my feet and I am Queen."

And when the Spanish ambassador takes the opportunity to hint the danger of keeping Suffolk, Guildford Dudley, and Lady Jane Grey, alive, her ready terse reply is "They shall die." "And your so loving sister? suggests Renard.

> "She shall die
> My foes are at my feet, and Philip king."
